on the management of non-profit organizations by instead focusing on both theoretical and empirical work. Jegers begins by considering definitions of non-profit organizations before examining the economic rationale behind their existence, the demand for them and its implications on their functioning. The final chapters look at the economic idiosyncrasies of the non-profit organizations, focusing on the fields of strategic management, marketing, accounting and finance. Written primarily for students taking courses in managerial economics in Britain and Europe, *The Business Economics and Managerial Decision Making* analyses the growth and development of privately owned firms and also the decisions made by firms operating in both private and public sector enterprises. Coverage is clear and concise, and avoids specialist techniques such as linear programming, which in a European context tend to belong in courses dealing with operations research. The book also avoids straying into areas of industrial economics, instead retaining a sharp focus on relevant issues such as the theory of the firm and the varying objectives that may be adopted in practice. Key sections are supported by case studies of real firms and actual decisions made.
