This study guide will be a reliable support and easy-to-use source of information for students in the fields of dosimetry,

physics, radiation oncology, and therapy as they progress through the educational levels in preparation for board examinations. The theoretical and practical knowledge gained by students on previous courses or in clinical settings is reinforced by means of almost 1200 questions and accompanying detailed analytical answers. In order to cater for the needs of all students, the questions are arranged according to three levels of difficulty. The level I questions are mainly intended for those hoping to pass the Medical Dosimetrist Certification Board (MDCB) exam but will also be beneficial for Medical Physics candidates taking written exams and for Radiation Oncology residents. The level II questions are in general clinically related and will be relevant for any student, while the level III questions are advanced and are especially suitable for American Board of Radiology candidates or those taking equivalent exams elsewhere in the world. The study guide is broken down into different subject areas, with provision of multiple questions and answers on each subject. In addition, the mathematical and physics questions include brief explanations of how the student can solve each problem. At the end of the guide, three practice tests are included with the same number of questions as are found in the MDCB exam. "We don't try to teach you everything there is to know about English, math, social studies or science. We tell you only what you need to know to score high on the GED. There's a big difference. In Cracking the GED: 1998 Edition, we'll teach you how to think like the test-makers and eliminate answer choices that look right but are planted to fool you, work backward from the answer choices to solve writing skills problems, crack the social studies and science sections without memorizing hundreds of facts, and tackle the math sections by "backsolving" your way to the right answers." "This book includes two full-length sample tests, with questions exactly like the ones you'll see on the actual GED."--BOOK

Designed for introductory courses in human anatomy, this text assumes no previous study of the human body. Instead, this book helps to facilitate a basic understanding of this broad discipline by presenting data, unified concepts and vocabulary in a manner that is easy for students to understand. Although the focus is on anatomy, links are made between structures and functions to help students understand anatomical concepts. The understanding of structure and function is further enhanced by considering defects and disorders in clinical settings. Organized by systems rather than

regions, each chapter of this seventh edition has been revised. This text's coverage of the human anatomy is now complemented by new features, including questions with figures, colour anatomy photographs, improved readability, phonetic pronunciations, and more exhibits.
