PRICE BOOK 2011 provides a comprehensive work manual for the industry. It gives costs for both general and civil engineering works and highway works, and shows a full breakdown of labour, plant and material elements, with labour rates updated in line with the latest CIJC wage agreement. In this 24th edition, assumptions on overheads and profits and on preliminaries have been kept low, labour rates have been adjusted, manufactured goods prices are rising faster than previously predicted, steel products, structural sections and reinforcement show steady rises in price, bridge bearing prices have risen significantly. Structured to comply with CESMM3 and MMHW, the book includes prices and rates covering the key items that make a general civil or highway construction project – from compressors to contracts and damp proofing to dams. In a time when it is essential to gain 'competitive advantage' in an increasingly congested market, this price book provides instant-access cost information and is a one-stop reference containing tables, formulae, technical information and professional advice. Water based heating systems are efficient, flexible, versatile and offer many advantages over other heating

systems. These advantages (fast response, good controllability, efficient zonal heating and largely silent operation) all require that initial design, installation, commissioning and maintenance be carried out to a high standard by competent engineers. Heating Services in Buildings provides the reader with a detailed and thorough understanding of the principles and elements of heating buildings using modern water based heating systems. A key theme of the book is that there is little difference, in the approach to the design and engineering, between domestic and commercial installations. The author's detailed but highly practical approach to the subject ensures there is sufficient information for students from both a craft background and those with more academic backgrounds to understand the material. This approach is complemented by straightforward, easy-to-use diagrams. Heating Services in Buildings supports a range of educational courses, including degree level building services engineering; NVQ Level 4 Higher Professional Diploma in Building Services Engineering; City & Guilds supplementary heating course and the Heating Design and Installation Course accredited by the European Registration Scheme (ERS).

A comprehensive comparative treatment of six instances of time-limited interests in land as encountered in fourteen European jurisdictions. The survey explores the commercial or social origins of each legal institution concerned and highlights their enforceability against third parties, their content and their role in land development. The commercial purpose of residential and agricultural leases is contrasted with the social aim of personal servitudes (and its common-

law equivalent liferent) to provide sustenance for life to mostly family members making the latter an important estate planning device. Whereas the ingrained principles of leases and personal servitudes restrain the full exploitation of land, it is indicated that public authorities and private capital could combine to turn the old-fashioned time-limited institutions of hereditary building lease (superficies) and hereditary land lease (emphyteusis) into pivotal devices in alleviating the acute shortage of social housing and in promoting the fullest exploitation of pristine agricultural land.

Describes 250 occupations which cover approximately 107 million jobs.

Includes information about how the location, condition and contents of the building to be heated, and how the expectation of the congregation must be taken into account. The different types of heat emitters available are also explained.

'A renowned group of experts has gathered to make this book a success by compiling today's knowledge on the subject available in research institutions and industry, as well as in international networks. The Pellet Handbook is both a comprehensive text for teaching requirements and a reference for practitioners in pellet production and use.' Josef Spitzer, Chalrman, Executive Committee, IEA Bioenergy The Pellet Handbook is undoubtedly the most comprehensive work ever produced on this subject, and I highly recommend it to industry professionals who are engaged in the production, marketing, transportation or consumption of wood pellets, as well as regulatory authorities, educators and students. Well illustrated and easy to read, The Pellet Handbook will surely become the essential reference for our industry.' Gordon Murray, Executive Director, Wood Pellet Association of Canada `In-depth like a PhD thesis and practical like a good tourist guide.' Remco Frenken, Senior
