

Chains And Images Of Psychological Slavery By Naim Akbar

Psychologists and philosophers have assumed that psychological knowledge is knowledge about, and held by, the individual mind. Psychological Knowledge challenges these views. It argues that bodies of psychological knowledge are social institutions like money or the monarchy, and that mental states are social artefacts like coins or crowns. Martin Kusch takes on arguments of alternative proposals, shows what is wrong with them, and demonstrates how his own social-philosophical approach constitutes an advance. We see that exists a substantial natural amount of philosophical theorising, a body of work that tries to determine the nature and structure of folk psychology. An introduction to the workings of constructivism, Psychological Knowledge is an insightful introduction to the history of psychology and the recent philosophy of mind.

Despite psychology's high profile, various aspects of the discipline and the profession are in urgent need of attention. Re-examining Psychology takes a critical look at some of the principles underlying the discipline and offers an insight into alternative psychological perspectives deriving from sub-Saharan Africa. The text is intended to facilitate a greater awareness in psychology of its own identity, and prevent the unqualified adoption of mainstream principles and methodologies by psychologists from sub-Saharan Africa and other majority cultures.

Includes music.

The psychological itinerary of the UNIVERSE OF EMOTIONS is structured in two parts: * Part 1: THE PSYCHIC WORLD, where the following topics are discussed: the Test „3 Colors”, „Shadow”, „Dark”, „Sun”, the Meaning and Functions of Emotions, the Representative Emotions, the Chains of Emotions, Representative Emotions and Personality, the „Map of Emotions”, Representative Personality, the „Human Figure” test with Representative Emotions, Opposite Emotions, the Chains of Opposite Emotions, the Hidden Personality, the „Map of Opposite Emotions”. * Part 2: The ID, which includes the following topics: the Test „Describe your personality” the Universe of Emotions, the Chains of Important Emotions, the „Map of Important Emotions”, the ID. The formative / cognitive incentives offered in the UNIVERSE OF EMOTIONS, permit the development of personality, the construction of the Universe of Emotions and the expression of the psychic world in which the subject lives. Understanding one's own emotions and values; educates one to live them intensely and deeply, to customize the reality with one's own way of being. It is essential to promote a full and satisfying life, to grasp the meaning of life, to perform the daily activities with a strong motivation. The psychological itinerary UNIVERSE OF EMOTIONS, therefore, allows a progressive discovery and understanding of the forms, size and forces that characterize the Universe of Emotions, the Psychic World, the Structure of Personality and Psycho-Social Attitudes of each person, through: - A self-psychological (if done individually) - A therapeutic relationship (if the experience is assisted by expert) - An educational relationship socializing (if made with a group of people who share the same route). The complete realization of the four routes of the psychological path KNOWING ONE'S SELF, with people from their social context, allows the construction of an effective and lasting well-being in the community in a constructive and meaningful way, promoting acceptance for empathy between people and a dynamic situation of availability and psycho-affective harmony, that encourages the formation of involving and satisfying social relations. The realization of the psychic path Knowing One's Self allows each individual to express his own psychic world and to reflect on itself; at the same time enable him to understand others and to evolve his personality characteristics within a comfortable and stimulating social context.

This book constitutes the refereed proceedings of the 10th Iberoamerican Congress on Pattern Recognition, CIARP 2005, held in Havana, Cuba in November 2005. The 107 revised full papers presented together with 3 keynote articles were carefully reviewed and selected from more than 200 submissions. The papers cover ongoing research and mathematical methods for pattern recognition, image analysis, and applications in such diverse areas as computer vision, robotics, industry, health, entertainment, space exploration, telecommunications, data mining, document analysis, and natural language processing and recognition.

Hands of the Potter is a holistic, culture specific, youth development manual and curriculum. It contains chapters on youth empowerment and justice, theology of rites of passage, spiritual formation, and sessions and activities for conducting a rites of passage program with youth. This manual is particularly helpful for engaging youth in development that forges within them a strong sense of identity, purpose, and direction empowering them, as agents of justice, to successfully thrive and navigate through an environment and culture that is hostile to their existence. As the manual can emphasize spiritual formation, it can also serve as an ecumenical tool. The curriculum is partly based in the Nguzo Saba (Principles of Kwanza) which makes it indigenous and contextual to culture as it is also biblically based making it more universal. Kaaria Yero Mucherera, MS, MDiv, DMin The author has served in youth outreach and development for several decades in both direct services and administration. He has also worked as a psychotherapist, social worker, educator, and church pastor. He has developed, evaluated, and reported on the success of programs and activities.

Ian Parker has been a leading light in the fields of critical and discursive psychology for over 25 years. The Psychology After Critique series brings together for the first time his most important papers. Each volume in the series has been prepared by Ian Parker, features a newly written introduction and presents a focused overview of a key topic area. Psychology After the Crisis is the first volume in the series and addresses three important questions: What was the crisis in psychology and why does it continue now? How did debates regarding the traditional 'laboratory experiment' paradigm in psychology set the scene for discourse analysis? Why are these paradigm debates now crucial for understanding contemporary critical psychology? The first two chapters of the book describe the way critical psychology emerged in Britain during the 1970s, and introduce four key theoretical resources: Marxism, Feminism, Post-Structuralism and Psychoanalysis. The chapters which follow consider in depth the critical role of Marxist thinking as an analytic framework within psychology. Subsequent chapters explore the application and limitations of critical psychology for crucial topics such as psychotherapy, counselling and climate change. A final chapter presents an interview which reviews the main strands within critical psychology, and provides an accessible introduction to the series as a whole. Psychology After the Crisis is essential reading for students and researchers in psychology, sociology, social anthropology and cultural studies, and for discourse analysts of different traditions. It will also introduce key ideas and debates in critical psychology for undergraduates and postgraduate students across the social sciences.

First published in 1962, this is a book about Marx and Freud - the two intellectual giants of the 20th century. It introduces many of readers to unknown aspects of Marx and Freud, as it also serves as an introduction to the life and mind of Erich Fromm as well.

The nature of mental images and their relation to language has caused controversy amongst psychologists for years, and the so-called "imagery debate" is still unresolved. Fresh light is now being shed on this topic using recent findings in neuroscience and the development of behavioural studies. Reviewing state-of-the-art research in the field of imagery, visuo-spatial memory, spatial representation and language, with special emphasis on their interactions, the volume shows how, and to what extent, findings from the studies on imagery can positively influence and enrich other psychological areas such as: Working memory Space and time representation Language and embodiment Chapter 9, written by Michel Denis, to whom this book is dedicated, analyses more than three decades of research, and outlines the shared scientific journey of friendship and discovery that has developed across various cognitive topics, all of which are linked to, and inspired by, imagery conceptualization. This is the only book to present a critical outline of research on these topics in a single volume, and as such will be invaluable to advanced undergraduates, postgraduates and researchers in such fields as cognitive psychology, neuroscience, computer science and neuropsychology.

The Concept of Self examines the historical basis for the widely misunderstood ideas of how African Americans think of themselves individually, and how they relate to being part of a group that has been subjected to challenges of their very humanity.

Jung was fascinated by the problem of unity in the personality. If the personality is made up of multiple voices or affective-imaginal states, as he believed it was, then how does an individual achieve a core self? Jung concluded that a coherent and continuous self is the hard won achievement of consciousness, the product of a mature personality in the second half of life. His theory of the integration of multiple subjectivities into an individuating self' anticipates current trends in constructivism and developmental psychology. Jung did not systematize his own work, nor attempt to make accessible many of his most complex ideas about the self. This volume explores his self psychology, its meaning and its application within the context of other contemporary theories of subjectivity. To describe Jung's self psychology more fully in the light of contemporary theories, the authors introduce twelve other self theories in a comparative analysis of the clinical case of a midlife man in psychotherapy. From Kohut and Piaget to Lichtenberg and Loevinger, the authors compare Jung's theories with other clinical and developmental approaches. The book's final chapter offers cogent suggestions for future use of Jung's self psychology. Unique in its treatment and understanding of Jung's theories, this volume illuminates and simplifies many of his central ideas about the self. For Jungians, it provides a contemporary context in which to read and systematize his work. For professionals in the larger therapeutic and educational communities, it offers an up-to-date introduction to a provocative and imaginative body of work that is a central chapter of modern theories of subjectivity.

Managerial Agency describes the science of psychological influence and its use in leadership. Combining psychological, and sociological with leadership literatures, Managerial Agency provides a model of operating, and a method for managers to achieve their aims through the work of their colleagues. The Managerial Agent influences team members and bosses to accept and adopt their viewpoint and priorities as their own, so being self motivated to carry them out. Managerial Agency borrows from the sociology of agency, authority and power; from the psychology of development, identity and personality and from theories of groups, politics and culture marrying these insights with those in organisational, leadership and charisma theory and practice. The Managerial Agent targets their colleagues' "habitus", their inner construct of values, views and attitudes; shaping it to conform to the Managerial Agent's own, thus creating an organisational or industrial ally in achieving their aims.

"The focus of this book has always been on the balancing and blending of research and clinical application and on the effort to involve the learner in the problem solving engaged in by clinicians and scientists. We continue to emphasize an integrated approach, showing how psychopathology is best understood by considering multiple perspectives and how these varying perspectives can provide us with the clearest accounting of the causes of these disorders as well as the best possible treatments. With the fifteenth edition, we have once again emphasized the recent and comprehensive research coverage that has been the hallmark of the book. Of equal importance, however, we have worked to make the prose ever more accessible to a variety of students"--

In a world where the pandemic of gender-based violence has become the order of the day, someone who cares about the authentic freedom of the human mind has had to dig deep into the treasure that will liberate humanity. The treasure was found in the confines of the below quote by the world's 1st Human 1st author Brightwell Dube: "The genuine and persistent affirmation we are infinitely loved beings at an early stage produces courage that consequently equips the human psyche to be empowered, secure and bold enough to walk away from any abusive situations". This self-help guide is an affirmation that genuine love from the early stages of the child is the missing antidote that deserves its fair share of exploration as a healing mechanism to eliminate gender-based violence. Delve into the nitty-gritty of how human behavior and elements such as identity, habits, growing up, self-worth, self-image, and search for meaning can either build-up or break the psychological chains of human abuse. Through real-life experiences and struggle with human abuse, the author aims to build an immensely mind-behaviorally-transformed generation of people. A generation that will use the weapon of genuine love to wipe out the scourge of human abuse. In brief, This is the gender-based violence vaccine that the world has been waiting for...

There is an ongoing debate as to whether African American Studies is a discipline, or multidisciplinary or interdisciplinary field. Some scholars assert that African American Studies use a well-defined common approach in examining history, politics, and the family in the same way as scholars in the disciplines of economics, sociology, and political science. Other scholars consider African American Studies multidisciplinary, a field somewhat comparable to the field of education in which scholars employ a variety of disciplinary lenses-be they anthropological, psychological, historical, etc., --to study the African world experience. In this model the boundaries between traditional disciplines are accepted, and researches in African American Studies simply conduct discipline based an analysis of particular topics. Finally, another group of scholars insists that African American Studies is interdisciplinary, an enterprise that generates distinctive analyses by combining perspectives from different traditional disciplines and synthesizing them into a unique framework of analysis.
