This book undertakes a theoretical and econometric analysis of intense economic growth in selected European countries during the end of the twentieth century and the beginning of the twenty first. Focusing on the accelerated economic growth that occurred in Ireland, the Netherlands, Spain, and Turkey, this book investigates the determinants and consequences of this "miracle" growth and discusses them in context of growth and development processes observed in European market-type economies after the World War II. Using imperfect knowledge economics (IKE) as a theoretical framework to interpret the empirical results, this book provides a fresh theoretical perspective in comparison with current Neo-classical, Keynesian and institutional paradigms. With this systematic approach, the authors seek to provide a unified methodology for evaluating the phenomenon of intense economic growth that has heretofore been missing from the discipline. Combining diverse theoretical and methodological strategies to provide a holistic understanding of the historical process of

economic change, this volume will be of interest to students and scholars of economic growth, econometrics, political economy, and the new institutional economics as well as policymakers.

Any experimental field consists of preparing special conditions for examining interesting objects for research. So naturally, the particular ways in which scientists prepare their objects determine the kind and the content of knowledge produced. This book provides a framework for the analysis of experimental practices - the Social Epistemology of Experiment - that incorporates both the 'material' and the 'social' dimensions of knowledge production. The Social Epistemology of Experiment is applied to experimental economics and in so doing, it introduces the epistemic role of the participation of human subjects in experiments and the causal efficacy of institutions in constraining and enabling human behaviour. It also develops the role of the social and socially established practices in overcoming the methodological difficulties associated with experimenting with humans subjects in the social sciences as well as the effect of scientists' interventions in the laboratory worlds. This book provides an historical and contextualized account of the emergence of experimental economics, the methodological discussions that have informed and constituted it, its main research programmes, and stylized facts. The analysis of its three main research programmes – market experiments, game theory experiments and individual decision-making experiments – shows how economics experiments are particularly tailored to produce knowledge about market institutions and individual behaviour in contexts where there might be conflicts of individual and social goals, and also about the processes of individual decision-making.

In 1984, the University of Bonn (FRG) and the International Institute for Applied System Analysis (IIASA) in Laxenburg (Austria), created a joint research group to analyze the relationship between economic growth and structural change. The research team was to examine the commodity composition as well as the size and direction of commodity and credit flows among countries and regions. Krelle (1988) reports on the results of this "Bonn-IIASA" research project. At the same time, an informal IIASA Working Group was initiated to deal with problems of the statistical analysis of economic data in the context of structural change: What tools do we have to identify nonconstancy of model parameters? What type of models are particularly applicable to nonconstant structure? How is forecasting affected by the presence of nonconstant structure? What problems should be anticipated in applying these tools and models? Some 50 experts, mainly statisticians or econometricians from about 15 countries, came together in Lodz, Poland (May 1985); Berlin, GDR (June 1986); and Sulejov, Poland (September 1986) to present and discuss their findings. This volume contains a selected set of those conference contributions as well as several specially invited chapters.

These seventeen essays provide an accessible and thorough reference for understanding the role of exchange rates in the international monetary system since 1973, when the rates were allowed to float. The essays analyze such issues as exchange rate movements, exchange risk premia, investor expectations of exchange rates and behavior of exchange rates in different systems. Frankel's sound empirical treatment of exchange rate questions shows that it is possible to produce work that is interesting from a purely intellectual viewpoint while contributing to practical knowledge of the real world of international economics and finance. The essays have been organized in a way that provides an introduction to the field of empirical international finance. Part I documents the steady reduction in barriers to international capital movement and leads logically to part II, which explains how exchange rates are determined. Both monetary and portfolio-based models are surveyed in part II, providing a clear transition to the topic of part III; the possible existence of an exchange risk premium. Part IV applies the tools discussed in earlier sections to explore various policy questions related to exchange rate expectations such as whether foreign exchange intervention matters and whether the European monetary system had become credible by 1991. Each part begins with a detailed introduction explaining not

only the central issues of that section but also suggesting connections with other essays in the book. Jeffrey A. Frankel is Professor of Economics at the University of California, Berkeley.

This textbook offers a comprehensive analysis of medical decision making under uncertainty by combining Test Information Theory with Expected Utility Theory. The book shows how the parameters of Bayes' theorem can be combined with a value function of health states to arrive at informed test and treatment decisions. The authors distinguish between risk-neutral, risk-averse and prudent decision makers and demonstrate the effects of risk preferences on physicians' decisions. They analyze individual tests, multiple tests and endogenous tests where the test outcome is chosen by the decision maker. Moreover, the topic is examined in the context of health economics by introducing a trade-off between enjoying health and consuming other goods, so that the extent of treatment and thus the potential improvement in the patient's health becomes endogenous. Finally, non-expected utility models of choice under risk and uncertainty (i.e. ambiguity) are presented. While these models can explain observed test and treatment decisions, they are not suitable for normative analyses aimed at providing guidance on medical decision making.

This book discusses various dimensions of Indian fiscal federalism, focusing on the current fiscal imbalances – both vertical and horizontal – and their correction. Throwing light on different angles of this subject, it presents well-researched papers, which are

divided into three sections. The first section, 'Fiscal federalism and resolving the fiscal imbalances', includes five chapters that discuss this theme and also explain the various strategies to remove the existing imbalances in India. 'Fiscal decentralization for high growth' which is the second section, explains how decentralisation leads to high economic growth and showcases empirical evidence from a few Indian states that are flourishing due to this policy. The third section, 'Emerging issues' offers six chapters describing several existing key concerns in fiscal federalism that have a major impact on achieving India's development goals. Including contributions from leading academics in this field, the book will be of great interest to research scholars and policy makers alike. "Besides addressing the core issue of fiscal imbalances and ways to correct them, the [chapters] touch on several issues confronting the Indian fiscal system at the centre, state and local levels. The [chapters] are well researched and well argued. The book is a valuable addition to the literature on Fiscal Federalism." – Dr. C. Rangarajan, Ex-Governor of Reserve Bank of India; Chairman, Madras School of Economics, Chennai, India.
