First published in 1689, John Locke's *Essay Concerning Human Understanding* is widely recognised as among the greatest works in the history of Western philosophy. The *Essay* puts forward a systematic empiricist theory of mind, detailing how all ideas and knowledge arise from sense experience. Locke was trained in mechanical philosophy and he crafted his account to be consistent with the best natural science of his day. The *Essay* was highly influential and its rendering of empiricism would become the standard for subsequent theorists. This Companion volume includes fifteen new essays from leading scholars. Covering the major themes of Locke's work, they explain his views while situating the ideas in the historical context of Locke's day and often clarifying their relationship to ongoing work in philosophy. Pitched to advanced undergraduates and graduate students, it is ideal for use in courses on early modern philosophy, British empiricism and John Locke.

With the aim of creating an autonomous regime for the interpretation and application of the contract, boilerplate clauses are often inserted into international commercial contracts without negotiations or regard for their legal effects. The assumption that a sufficiently detailed and clear language will ensure that the legal effects of the contract will only be based on the contract, as opposed to the applicable law, was originally encouraged by English courts, and today most international contracts have these clauses, irrespective of the governing law. This collection of essays demonstrates that this assumption is not fully applicable under systems of civil law, because these systems are based on principles, such as good faith and loyalty, which contradict this approach.

The degree of development reached by cooperatives of different sectors throughout the world, which among others led to the UN declaring 2012 as the International Year of Cooperatives, needs to be accompanied by a similar development of corresponding legislation. To this end, a better knowledge of cooperative law from the comparative point of view, as has already been established for other types of enterprises, becomes of great importance. This book strives to fill this gap, and is divided into four parts. The first part offers an analytic and conceptual framework with which to understand, study and assess cooperative law from a transnational and comparative perspective. The second part includes several chapters dealing with attempts to harmonize cooperative laws. The third part contains an overview of more than 30 national cooperative laws, while the last part summarizes and compares these national cooperative laws, thus laying the foundation for a comparative cooperative law doctrine.

The purpose of this research, broadly speaking, is to expose the threat that fake news poses to our national security. This thesis answers the question: Can the information laundering model, or a modified version of it, be used to explain how the internet is exploited to spread fake news, and the resulting threat to the United States? I assert that a well-crafted narrative, whether true or false, can be spread rapidly online due to the accessibility and interconnectedness of the internet ecosystem. I then articulate how these narratives can be further accelerated and disseminated when propagandists take advantage of existing processes that improve the customization, ease of access, and availability of information online. I do this by modifying the information laundering model, and then using the new model to examine the interconnectedness of search engines, blogs, social networking platforms, and media/academic outlets, and how these connections can be exploited to launder false or purposefully misleading information into public discourse. Finally, I demonstrate how this process allows adversarial nations, criminals, and malicious actors to increase public discord, undermine democracy, and threaten Americans physical and cognitive security.
