The Ninth Edition of Securities Regulation: Cases and Materials brings onboard two new co-authors—Ann Lipton and William Sjoström—to a casebook that has long set the standard for providing students with an in-depth, sophisticated, practical look at contemporary securities law. As it has since its first edition, Securities Regulation: Cases and Materials contains a very teachable mix of problems, cases, and textual material, encouraging students to build their knowledge base by being active problem-solvers. Always forward-thinking, stressing current developments and controversies, the book is also highly modular, so that professors can easily pick and choose how to structure their courses without being locked into any given progression. New to the Ninth Edition: Coverage of “cryptocurrencies” and coin offerings Commentary on market developments such as indexing and algorithmic trading A tighter set of problems and materials on gun-jumping under Section 5 The SEC’s latest reforms of Regulation D and the intrastate offering exemption Spotify and the trend toward direct listings as a way of going public Coverage of Supreme Court decisions from the last three years, including Lorenzo, Salman, Cyan, Lucia, and Kokesh, as well as important lower court cases

interdisciplinary approach, this new edition, divided into five sections, begins by examining healthcare as an integrated system. Chapter 1 provides a hierarchical model of healthcare, rising from departments, to centers, regions and the “macro system.” A new chapter demonstrates how to use simulation to assess the interaction of system components to achieve performance goals, and Chapter 3 provides hands-on methods for developing process models to identify and remove bottlenecks, and for developing facility plans. Section 2 addresses crowding and the consequences of delay. Two new chapters (4 and 5) focus on delays in emergency departments, and Chapter 6 then examines medical outcomes that result from waits for surgeries. Section 3 concentrates on management of demand. Chapter 7 presents breakthrough strategies that use real-time monitoring systems for continuous improvement. Chapter 8 looks at the patient appointment system, particularly through the approach of advanced access. Chapter 9 concentrates on managing waiting lists for surgeries, and Chapter 10 examines triage outside of emergency departments, with a focus on allied health programs. Section 4 offers analytical tools and models to support analysis of patient flows. Chapter 11 offers techniques for scheduling staff to match patterns in patient demand. Chapter 12 surveys the literature on simulation modeling, which is widely used for both healthcare design and process improvement. Chapter 13 is new and demonstrates the use of process mapping to represent a complex regional trauma system. Chapter 14 provides methods for forecasting demand for healthcare

on a region-wide basis. Chapter 15 presents queueing theory as a method for modeling waits in healthcare, and Chapter 16 focuses on rapid delivery of medication in the event of a catastrophic event. Section 5 focuses on achieving change. Chapter 17 provides a diagnostic for assessing the state of a hospital and using the state assessment to select improvement strategies. Chapter 18 demonstrates the importance of optimizing care as patients transition from one care setting to the next. Chapter 19 is new and shows how to implement programs that improve patient satisfaction while also improving flow. Chapter 20 illustrates how to evaluate the overall portfolio of patient diagnostic groups to guide system changes, and Chapter 21 provides project management tools to guide the execution of patient flow projects.

We are living in a culture still defined by unrealistic gender stereotypes and expectations. Despite much progress being made, women are still not, on the whole, treated as equals to men. Gender pay gaps, invisible labour, and outdated attitudes towards women (especially around sex and relationships) mean that many of us grow into adulthood shackled to our need to be nice, liked, and to please, at the detriment of our happiness and wellbeing. In *Ditch the People Pleaser*, you are going to explore four of the areas where you may find yourself people pleasing: life, relationships (including love and sex), work, and business and leadership. This book will help you to: 1) Undo the effects of people pleasing in your life so you ARE free from expectations + boxes. 2) Release the need to please so you are able to achieve deep connection, a sense of purpose + guidance from your inner knowing. 3) Break the cycle for your personal + spiritual growth AND for the young people in your life. You will be able to model and pass on a healthier way of being for the next generation. 4) Use techniques and practices that will transform the way you feel about being nice and acceptable. 5) Strengthen your relationship to yourself and the people in your life, expand into your work and contribute to compassionate change. Not only will you discover what the antidote is to people pleasing you will be supported with practical techniques and supportive resources to ditch the need to please right away.

Risk assessment is one of the main parts of complex systematic research of natural and man-made hazards and risks together with the concepts of risk analysis, risk management, acceptable risk, and risk reduction. It is considered as the process of making a recommendation on whether existing risks are acceptable and present risk control measures are adequate, and if they are not, whether alternative risk control measures are justified or will be implemented. Risk assessment incorporates the risk analysis

and risk evaluation phases. Risk management is considered as the complete process of risk assessment, risk control, and risk reduction. The book reflects on the state-of-the-art problems and addresses the risk assessment to establish the criteria for ranking risk posed by different types of natural or man-made hazards and disasters, to quantify the impact that hazardous event or process has on population and structures, and to enhance the strategies for risk reduction and avoiding.

This book presents a range of dynamic programming (DP) techniques applied to the optimization of dynamical systems. How can you fairly evaluate your teachers' day-to-day teaching style and classroom management on the basis of sporadic classroom visits? How can stress be alleviated for both the principal and teachers? *Effective Teacher Evaluations* is a must-have reference for all principals. It is a 192-page how-to handbook that helps reduce tension at evaluations, and provides better methods for assessing performance. This easy-to-read guide supplies models and suggests creative ways to constructively criticize. Plus, it discusses legalities that will protect you and your school from potential lawsuits.

lessons are further reinforced by the video presentations found on the enclosed multimedia disc. This textbook contains a series of eleven tutorial style lessons designed to introduce beginning CAD users to AutoCAD 2014. It takes a hands-on, exercise-intensive approach to all the important 2D CAD techniques and concepts. This text is also helpful to AutoCAD users upgrading from a previous release of the software. The new improvements and key enhancements of the software are incorporated into the lessons. The 2D-CAD techniques and concepts discussed in this text are also designed to serve as the foundation to the more advanced parametric feature-based CAD packages such as Autodesk Inventor. The basic premise of this book is that the more designs you create using AutoCAD 2014, the better you learn the software. With this in mind, each lesson introduces a new set of commands and concepts, building on previous lessons. This book is intended to help readers establish a good basis for exploring and growing in the exciting field of Computer Aided Engineering.
