Driven by the Standards for Technological Literacy, this National Science Foundation-sponsored book is written by national leaders in engineering and technology education and addresses the most contemporary technological content using engaging, pedagogically sound "informed design" activities. This unique approach encourages students to develop a thorough understanding of engineering and technology before they ever attempt to develop detailed design solutions. The activities present students with a design problem, and prompt students to begin the solution-finding process with research, inquiry, and analysis. Only after this important step can students begin to discuss specifications and constraints, propose alternatives, and select an optimal design. This process fosters a strong student-teacher discourse and cultivates language proficiency, both with the end result of enhancing student's overall knowledge. Testing, evaluation, and modifications are addressed next, followed by a communication of achievements in a class presentation and final design report. Woven throughout the text are passages that will acquaint students with the requirements, responsibilities, necessary personal attributes and attitudes, and educational pathways that will lead to success in the various technological areas. Federal administrative law is a vast expanse of statutory provisions and case law. This text aims to map these provisions, setting out the case and statute law in a structured and amenable way. Federal Administrative Law commences with discussion of the composition, powers and decision-making processes of the executive government. Then it covers the major remedies available for those who are dissatisfied by a decision of the executive government - reasons for decision, access to information under FOI legislation, judicial review, appeal to the Administrative Appeals Tribunal, review by the Ombudsman, remaking a decision, collateral review and special review. Enright also engages with the perennial conceptual problems of

administrative law. Difficulties with separating legislative, executive and judicial power, and in distinguishing between law and fact, are considered insoluble, Enright argues, only because they have not been approached in the right way. Enright argues for going back to basics, emphasising the necessity of asking the right question in the first place. In a similar vein, Enright investigates problems with legitimate expectation in the law of natural justice and argues that difficulties with standing can be treated better by taking a more analytical approach to the interests involved. Federal Administrative Law will serve as a basic text and reference book for those who work in Commonwealth administrative law. It is written in a clear and easy to read style that will make it suitable as a textbook in undergraduate courses.

Cases & Materials on Constitutional & Administrative Law provides students with a comprehensive selection of legal resources to accompany their studies. Extracts from leading cases, academic works, and political documents are drawn together with incisive author commentary and thought-provoking questions to highlight the historical debates and ongoing development of the subject. The authors take a critical look at the doctrines of constitutional law and the principles of administrative law, showing how the constitution operates in relation to Parliament, the Executive, and the citizen. Online Resource Centre This book is supported by an Online Resource Centre providing a wide range of extra resources to further support students in their studies, including: - Updates in constitutional and administrative law - An extensive range of web links - An interactive timeline of significant public law events throughout history - 'Oxford News Now'- a live feed on topical public law issues, sourced from news websites such as the BBC and Guardian

The Code of Federal Regulations Title 30 contains the codified United States Federal laws and regulations that are in effect as of the date of the publication pertaining to U.S. mineral resources, including: coal mining and mine safety; surface mining, fracking and reclamation; offshore oil, gas and sulphur drilling, safety, oil spills response; minerals leasing and revenues from public lands.

This straightforward, student-friendly book combines a popular problems approach with a well-balanced mix of text and cases to build a solid, nuts-and-bolts introduction to the Bankruptcy Code, statutory rules, and issues of bankruptcy law. Its sensible organization allows instructors to tailor coverage to their own approach. The seventh edition benefits from the addition of a new coauthor, Professor Bradley, of the University of Kentucky. New to the Seventh Edition: A complete rewrite, primarily by Professor Bradley, with the focus is now being heavily on preparing attorneys for the real-world problems they will encounter in a practice that focuses on bankruptcy and other debtor/creditor issues. A new chapter covering the new subchapter V of Chapter 11, which was introduced by the Small Business Reorganizations Act and which has proven very popular since it came into force in March of 2020. An extended treatment of 363 Sales, better reflecting modern practice realities as compared with how other books deal with this topic. Professors and student will benefit from: A more textual approach in explaining the difficulties of the law by adding many explanations of how to approach and handle the legal difficulties in this area as they arise. Less reliance on Problems in favor of explanations of how to approach and handle the legal difficulties in this area as they arise. A simple but thorough summary of bankruptcy law in chapter one, which makes it easier for students to place all the future chapters into context.
