Thinking Through Ethics and Values in Primary Education is an accessible text that encourages readers to explore deeply the ethics and values surrounding primary education. The text helps the reader to critically reflect on the principles that underpin education. Specifically written for education students in the later years of their course, the text draws on research and practice to explore the challenges and opportunities involved, while helping to develop the reader's own critical thinking skills. The book begins by asking 'what are ethics and values?' and goes on to explore social diversity and society and education. It considers ethics and values and the curriculum, school organisation and the classroom. A chapter on ethics, values and the teacher encourages the reader to examine their own thoughts about education. Throughout, practical guidance runs alongside structured critical thinking exercises to help the reader and reflect on both theory and practice. About the Series Thinking Through Education is a new series of texts designed and written specifically for those education students entering the second or final phase of their degree course. Structured around sets of specific 'skills', each chapter uses critical thinking and reflective exercises to develop greater subject knowledge and critical awareness.

The Second Edition of Family Resource Management unlocks the complexity of family decision making for students, enabling them to grasp both the concepts and the underlying explanations of family behavior. Authors Tami James Moore and Sylvia M. Asay have provided a strong theoretical base to facilitate both understanding and retention and have organized the text to parallel the decision-making process

employed by professionals. As a result, it includes sections on introduction to the study of family resource management, identification of family needs, understanding resources available to families in differing socioeconomic circumstances, evaluating alternatives and making choices, and implementing and evaluating decisions.

This comprehensive, user-friendly introductory textbook to political psychology explores the psychological origins of political behavior. The authors introduce readers to a broad range of theories, concepts, and case studies of political activity to illustrate that behavior. The book examines many patterns of political behaviors, including leadership, group behavior, voting, race, ethnicity, nationalism, terrorism, war, and genocide. It explores some of the most horrific things people do to one another for political purposes, as well as how to prevent and resolve conflict -- and how to recover from it. The goal is to help the reader understand the enormous complexity of human behavior and the significant role political psychology can play in improving the human condition. The book contains numerous pedagogical features, including text boxes highlighting current and historical events to help students see the connection between the world around them and the concepts they are learning. Different research methodologies used in the discipline are employed, such as experimentation and content analysis. The "Political Being" is used throughout to remind the reader of the psychological theories and concepts to be explored in each chapter. New to the second edition is coverage of recent political events, including the 2008 US presidential election, Darfur, Iraq, and Afghanistan. There are now separate chapters on race, ethnic conflicts, terrorism, and conflict resolution. In addition, instructor resources are available online. This accessible and engaging introductory textbook is suitable as a primary text on a range of upper-level courses in political psychology,

This book questions the way policy making has been distanced from politics in prevailing theories of the policy process, and highlights the frequently overlooked ubiquity of values and values conflicts in politics and policy. It examines the strengths and weaknesses of current theories, reviews the illusions of rationalism in politics, and explores the way values are implicated throughout the democratic process, from voter choice to policy decisions. It argues that our understanding of public policy is enhanced by recognizing its intrinsically political and value-laden nature.

How do right-wing extremist organizations throughout the world use the Internet as a tool for communication and recruitment? What is its role in identity-building within radical right-wing groups and how do they use the Internet to set their agenda, build contacts, spread their ideology and encourage mobilization? This important contribution to the field of Internet politics adopts a social movement perspective to address and examine these important questions.

Conducting a comparative content analysis of more than 500 extreme right organizational web sites from France, Germany, Italy, Spain, the United Kingdom and the United States, it offers an overview of the Internet communication activities of these groups and systematically maps and analyses the links

and structure of the virtual communities of the extreme right. Based on reports from the daily press the book presents a protest event analysis of right wing groups' mobilisation and action strategies, relating them to their online practices. In doing so it exposes the new challenges and opportunities the Internet presents to the groups themselves and the societies in which they exist.

Social work skills are essential to good practice and more important than ever following changes to the social work curriculum. Students must be able to demonstrate knowledge of core skills within policy, law as well as demonstrating empathy and good communication. This fully-revised student guide, previously published as *Social Work Skills with Adults*, will help to cement these skills and includes chapters on intervention, empowerment and advocacy, skills for collaborative working, self-presentation and much more. This book will equip social work students with the skills to meet the new and perennial challenges to achieving empowering practice with carers and people who use services. There are chapters on working with families, communities and individuals and how social policy affects all of these groups. Case studies and reflective exercises are used throughout to explore these issues and help link theory to practice.

This sixth edition of *Organisational Behaviour* provides a thorough introduction to the field for students and aspiring practitioners alike. Comprehensively revised to reflect the most recent developments, this text also retains its strong research foundations. Balancing a psychological approach with social perspectives, covering the effects of personality, emotions, values and group dynamics on an organisation, this book also has a strong business focus emphasising the role of an organisation's leaders, structure and politics on its

A new Council of Europe reference framework of competences for democratic culture! Contemporary societies within Europe face many challenges, including declining levels of voter turnout in elections, increased distrust of politicians, high levels of hate crime, intolerance and prejudice towards minority ethnic and religious groups, and increasing levels of support for violent extremism. These challenges threaten the legitimacy of democratic institutions and peaceful co-

existence within Europe. Formal education is a vital tool that can be used to tackle these challenges. Appropriate educational input and practices can boost democratic engagement, reduce intolerance and prejudice, and decrease support for violent extremism. However, to achieve these goals, educationists need a clear understanding of the democratic competences that should be targeted by the curriculum. This book presents a new conceptual model of the competences which citizens require to participate in democratic culture and live peacefully together with others in culturally diverse societies. The model is the product of intensive work over a two-year period, and has been strongly endorsed in an international consultation with leading educational experts. The book describes the competence model in detail, together with the methods used to develop it. The model provides a robust conceptual foundation for the future development of curricula, pedagogies and assessments in democratic citizenship and human rights education. Its application will enable educational systems to be harnessed effectively for the preparation of students for life as engaged and tolerant democratic citizens. The book forms the first component of a new Council of Europe reference framework of competences for democratic culture. It is vital reading for all educational policy makers and practitioners who work in the fields of education for democratic citizenship, human rights education and intercultural education.

This title, written for headteachers, teachers, governors and health workers, is divided into four parts: part one looks at the changing sexual attitudes and values between 1950 and 2000; part two analyses the principles underpinning sex education, including the problem of values in sex education, liberal values, health, well-being, pleasure and leisure, religious values, family values, and love; part three analyses how a school policy for sex education can be developed. It discusses the aims for sex education, frameworks for practice, the importance of listening to children and the non-school influences on children's values; and part four studies sex education in practice from the age of 14 to 19 years. Scotland is at the heart of modern sustainable upland management. This collection of cutting edge studies is a first-to-press synthesis of studies carried out by the Centre for Mountain Studies at Perth College, which will be both enlightening and relevant

This work addresses one of the most central and timely subjects in Public Administration - how to make sense of critical theory and especially how to assess its implications for everyday practice.

The European Social Survey (the ESS) is an academically-driven social survey designed to chart and explain the interaction between Europe's changing

institutions and the attitudes, beliefs and behaviour patterns of its diverse populations. Established in 2001, and currently preparing for its seventh round, this biennial cross-sectional survey covers more than thirty nations and employs the most rigorous methodologies. This volume provides an analysis of the Irish data over six rounds of the European Social Survey, focusing on the internal changes over time in Ireland and situating these changes in a broader European context. The book's core chapters deal with the primary themes of the European Social Survey: Institutional Trust, Democracy and Legitimacy; Political Engagement and Socio-Political Values; Moral and Social Values; Social Capital and Social Exclusion; and National, Ethnic, and Religious Identity. A separate chapter focuses on the survey's rotating modules, which change from survey to survey. These topics include Citizenship, Involvement and Democracy; Immigration; Well-Being; Health; Economic Morality in Europe and Welfare Attitudes; and Trust in Criminal Justice. Each chapter provides a list of background literature to the topic in Ireland, an analysis of the data that will be both accessible for the general reader, but offering something deeper to the expert, and a clear comparison of how the Irish data fit in with the rest of Europe. This book charts a changing Ireland over a highly significant period of its history. Given the significance of the ESS as the most rigorous social science survey in Europe and the scope of its questionnaires, this volume is highly pertinent both in terms of how it maps political, social, demographic and attitudinal changes in Ireland, and in the way it places

those changes within a European context.

The book addresses the vital issue of how business leaders can prepare themselves to deal with the impact of unexpected events. It raises key questions for leaders to address if they are to avoid being distracted by crisis and remain in touch with a wider context that is subject to constant uncertainty and change.

This text uses a consumerism theme to help students make intelligent decisions about resources, time, energies and purchases. Using the latest census and demographic data, the text relates examples to current events and attitudes. An emphasis has been placed on singles and/or single parent families as a demographic group throughout the text. In addition, the text takes on an interdisciplinary, global and multicultural focus.

Unique coverage of management history is covered in Chapter 2 and Chapter 14 discusses future challenges of technology, family and global change and the environment.

Civic Education and Competences for Engaging Citizens in Democracies Murray Print University of Sydney and Dirk Lange Leibniz University of Hannover What competences do young citizens need to be considered as active and engaged in the context of a modern Europe? In 2011 an invited research symposium of leading civic and political educators, social scientists and educational

administrators from Europe met in Hannover, Germany to consider this key concern facing Europe today. In examining the above question the symposium addressed two significant issues: 1. Identify key competencies required for active citizenship of young people in Europe of the future. 2. Translate those competencies to school-based activities in the form of curricular and pedagogical strategies. The group addressed these questions through discussion in the symposium and through previously prepared papers. Subsequently the group participated in a modified Delphi Technique to identify the key competences and the final competences are presented in this book. The chapters of this book represent the contribution of the participants before, during and after the symposium with opportunities for review and reflection. Murray Print and Dirk Lange are professors from the University of Sydney and Leibniz University of Hannover respectively and are national leaders in civics and citizenship education in their respective countries. They have brought together a group of leading European civic and citizenship educators from different academic fields to explore the key issue and to identify the competences for young people to become active and engaged European citizens.

Through the years, the police have performed the time-honored functions of controlling crime, maintaining law and order, and providing services. This comprehensive book redefines the police role in many communities, especially as police departments have moved toward the creation of a partnership with citizens, private agencies and other community service departments. Major topics include: (1) an added major development in the external review of police conduct with anticipation that police review boards will become more prevalent; (2) the fact that internal review will still be an important process of the organizational response to police misconduct acknowledging Internal Affairs is here to stay; (3) the trend for the courts at the federal level to intervene with Consent Decrees, Memorandums of Understanding, and Technical Assistance letters in cities from coast to coast; and (4) the use of deadly force that has reached the point where it is viewed as a recurrent police problem. Major cases such as

the Rodney King beating, the Louima case, the James Bryd case, and the Mathew Shepard case are examined to see how these issues impacted our operational and legal system. The book also addresses the issues of profiling and vehicular pursuit that remain a major issue in many communities, and while remedies have cured some of these problems, it still remains a major issue. The text also focuses on the inroads that women in policing are making as more females enter law enforcement and ascend to positions of higher power. Law enforcement professionals, policymakers, investigators, attorneys, and the general public will find the book to be of special interest.

The second edition of Assessment for Excellence arrives as higher education enters a new era of the accountability movement. In the face of mandates such as results-based funding and outcomes-based accreditation, institutions and assessment specialists are feeling increasingly pressured to demonstrate accountability to external constituencies. The practice of assessment under these new accountability pressures takes on special

significance for the education of students and the development of talent across the entire higher education system. This book introduces a talent development approach to educational assessment as a counter to prevailing philosophies, illustrating how contemporary practices are unable to provide institutions with meaningful data with which to improve educational outcomes. It provides administrators, policymakers, researchers, and analysts with a comprehensive framework for developing new assessment programs to promote talent development and for scrutinizing existing policies and practices. Written for a wide audience, the book enables the lay reader to quickly grasp the imperatives of a properly-designed assessment program, and also to gain adequate statistical understanding necessary for examining current or planned assessment policies. More advanced readers will appreciate the technical appendix for assistance in conducting statistical analyses that align with a talent development approach. In addition, institutional researchers will benefit from sections that outline the development of appropriate student databases.

The Science of Attitudes is the first book to integrate classic and modern research in the field of attitudes at a scholarly level. Designed primarily for advanced undergraduates and graduate students, the presentation of research will also be useful for current scholars in all disciplines who are interested in how attitudes are formed and changed. The treatment of attitudes is both thorough and unique, taking a historical approach while simultaneously highlighting contemporary views and controversies. The book traces attitudes research from the inception of scientific study following World War II to the issues and methods of research that are prominent features of today's research. Researchers in the field of attitudes will be

Download Free Chapter 3 Values Attitudes And Job Satisfaction

particularly interested in classic and modern research on the organization, structure, strength and function of attitudes. Researchers in the field of persuasion will be particularly interested in work on attitude change focusing on propositional and associative learning, metacognition and dynamic theories of dissonance, balance and reactance. The book is designed to present the integration of the properties of the attitude with the dynamic considerations of attitude change. The Science of Attitudes is also the first book on attitudes to devote entire chapters to work on implicit measurements, resistance to persuasion, and social neuroscience. An argument that what makes science distinctive is its emphasis on evidence and scientists' willingness to change theories on the basis of new evidence. Attacks on science have become commonplace. Claims that climate change isn't settled science, that evolution is "only a theory," and that scientists are conspiring to keep the truth about vaccines from the public are staples of some politicians' rhetorical repertoire. Defenders of science often point to its discoveries (penicillin! relativity!) without explaining exactly why scientific claims are superior. In this book, Lee McIntyre argues that what distinguishes science from its rivals is what he calls "the scientific attitude"—caring about evidence and being willing to change theories on the basis of new evidence. The history of science is littered with theories that were

Download Free Chapter 3 Values Attitudes And Job Satisfaction

scientific but turned out to be wrong; the scientific attitude reveals why even a failed theory can help us to understand what is special about science.

McIntyre offers examples that illustrate both scientific success (a reduction in childbed fever in the nineteenth century) and failure (the flawed “discovery” of cold fusion in the twentieth century). He describes the transformation of medicine from a practice based largely on hunches into a science based on evidence; considers scientific fraud; examines the positions of ideology-driven denialists, pseudoscientists, and “skeptics” who reject scientific findings; and argues that social science, no less than natural science, should embrace the scientific attitude. McIntyre argues that the scientific attitude—the grounding of science in evidence—offers a uniquely powerful tool in the defense of science.

The twelfth edition of the EFA Global Monitoring Report marking the 2015 deadline for the six goals set at the World Education Forum in Dakar, Senegal, in 2000 provides a considered and comprehensive accounting of global progress. As the international community prepares for a new development and education agenda, this report takes stock of past achievements and reflects on future challenges. There are many signs of notable advances. The pace towards universal primary education has quickened, gender disparity has been reduced in many countries and governments are increasing their focus on making sure children receive an education of good quality. However, despite these efforts, the world failed

to meet its overall commitment to Education for All. Millions of children and adolescents are still out of school, and it is the poorest and most disadvantaged who bear the brunt of this failure to reach the EFA targets.

Dementia care presents a huge challenge to health and social care both now and in the future. The number of those in the UK with dementia is expected to increase to 1.4 million in the next 30 years. Regardless of the field of nursing all nurses need to understand the experiences of a person with dementia and the issues related to their care. This book provides an introduction to dementia care for nursing students with an emphasis on humanizing care. Real life case studies show the person behind the patient and explore the ethical dilemmas that a nurse may face.

The Second Middle East Edition blends theory with contemporary management practice. Dr. Marina Apaydin (American University of Beirut) joins the authoring team in this edition for significant enhancements to content and presentation of topics. New chapter-opening cases have been added to feature companies and management personalities from the Middle East. Management Insights vignettes offer balanced representation of international as well as local, small-to-medium sized companies and start-ups, to ensure applicability of theory in a variety of contexts. Updated content and improved topics coverage ensure closer alignment with introductory management courses:

- Two new topics have been added on the history of management in the Arab world in Chapter 2, and Islamic

Primarily intended for undergraduate students of all disciplines of engineering and students of computer applications (MCA), this book is a comprehensive exposition of the values and ethical principles that one needs to adopt to become a responsible and accountable professional. The book is organized in nine chapters that addresses the three broad areas of concern—values, ethics, and sustainable development. It first discusses the prevalent concept of values in human society, the various types of values, and the crisis of values that seems to be engulfing the contemporary society. The concept of ethics, the various ethical values, and the ethical requirements for a professional in the modern workplace are highlighted in detail. The ramifications of industrialization, the respective roles of science, technology and engineering, as well as the need for preservation of the environment and the use of eco-friendly technologies are explained. Finally, the ethical issues involved in the management of resources are discussed. A number of case studies have been provided in the book to enable a clear understanding of the topics presented. Each chapter contains short answer as well as long answer questions to test the
