"This book deals with kinship in the early Middle Ages. Most scholars agree in theory that kinship is not a biological fact but a universally deployable system for structuring social relations. In empirical practice, however, research on kinship has focused almost exclusively on descent and alliance. This book addresses kinship beyond these concepts. It is a study of godparenthood and adoption in Frankish society at the time when Roman adoption was disappearing and godparenthood was being invented as a social tool."--BOOK JACKET.Title Summary field provided by Blackwell North America, Inc. In just a half century, humanity has made an astounding leap in its understanding of life. Now, one of the giants of biological science, Christian de Duve, discusses what we've learned in this half century, ranging from the tiniest cells to the future of our species and of life itself. With wide-ranging erudition, De Duve takes us on a dazzling tour of the biological world, beginning with the invisible workings of the cell, the area in which he won his Nobel Prize. He describes how the first cells may have arisen and suggests that they may have been like the organisms that exist today near deep-sea hydrothermal vents. Contrary to many scientists, he argues that life was bound to arise and that it probably only took millennia--maybe tens of thousands of years--to move from rough building blocks to the first organisms possessing the basic properties of life. With equal authority, De Duve examines topics such as the evolution of humans, the origins of consciousness, the development of language, the birth of science, and the origin of emotion, morality, altruism, and love. He concludes with his conjectures on the future of humanity--for instance, we may evolve, perhaps via genetic engineering, into a new species--and he shares his personal thoughts about God and immortality. In *Life Evolving*, one of our most eminent scientists sums up what he has learned about the nature of life and our place in the universe. An extraordinarily wise and humane volume, it will fascinate readers curious about the world around them and about the

1. 1. COLLINGWOOD'S RECEPTION Collingwood's scholarly reputation is a complicated and variegated affair. For one has not only to make a distinction between his reputation during his life and after his premature death in 1943, but also between his reputation as a philosopher and as an archaeologist and historian. Collingwood himself considered philosophy as his primary occupation and his work in archaeology and history as that of an amateur. This work, however, reached the highest standards and his contributions to archaeology and history have always been appreciated accordingly. Though Collingwood's reputation as the main expert on Roman Britain in the period between the two wars remains unchallenged, modern developments in this field have inevitably superseded his contributions and made them primarily voices from a past period. Philosophy was the other half of Collingwood's scholarly life. In his own thinking there was always a close relationship between philosophy and archaeological and historical practice. His interpreters have not always recognized this connection. I have met archaeologists who were surprised to hear that Collingwood was a philosopher as well, who either did not know that he had been a practising and philosophers archaeologist and historian, or thought it no more than a private hobby. Collingwood's reputation as a philosopher was very different from the one he gained in archaeology

Ned Ryerson. That's who a lot of people picture when they think of insurance agents. Don't remember Ned? Sure you do. He was the "cheesy" insurance agent from the Bill Murray classic *Groundhog Day*. In Ned, we see examples of what can go so horribly awry with the insurance sales process - someone who gets people to sign on the dotted line because it's the only way they can escape him, someone who is far more of a salesman than a trusted advisor, and of course, someone who is living commission-to-commission, putting his own survival above his clients' needs. The reason all these things make Ned our "anti-mascot" is that if you fail to grasp the danger of these things, you'll undoubtedly place major obstacles between you and your career goals. Starting of course, with your quest to pass the licensing exam. Thus, the goal of this book is twofold. First and foremost, I want to help you pass the exam, and do so by a wide margin. I don't want it to be even close. I want your state's insurance commissioner to be so blown away by your score that he takes your exam home and hangs it up on his refrigerator. But second, I want this book to become the basis for your career. I want it to help shape the way you approach insurance sales so that you not only help protect others against loss, but protect yourself

(and your hard-earned license) as well. Even more, I want it to protect you against an average career. I want this book to help insure your financial success. Interested? If you are, then you're in for some exciting lessons about insurance theory, products, and sales. I'll share with you both the practical and conceptual knowledge you need to get to where you want to go.

Personal interactions are the single most effective way for teachers to understand and evaluate their student as learners. Responding specifically to new Common Core State Standards in reading and writing, this book introduces pre- and inservice teachers to a method of one-on-one interaction the authors refer to as the "stretch conference." This book provides detailed practical advice on the logistics of implementing these conferences during the busy school day, including tips on how and when to schedule conferences and how to successfully manage the classroom during conference time. The authors argue that, rather than using valuable conference time for word-level concerns and editing, teachers should focus on more ambitious goals that will deepen (or "stretch") students' skills in comprehension and writing. This resource suggests where conferences fit in with other important pieces of literacy instruction; introduces a variety of high-quality cues to use during conferences; and shows how conferences can function as

Who has not seen a picture of the Great Pyramid of Egypt, massive in size but deceptively simple in shape, and not wondered how that shape was determined? Starting in the late eighteenth century, eleven main theories were proposed to explain the shape of the Great Pyramid. Even though some of these theories are well known, there has never been a detailed examination of their origins and dissemination. Twenty years of research using original and difficult-to-obtain source material has allowed Roger Herz-Fischler to piece together the intriguing story of these theories. Archaeological evidence and ancient Egyptian mathematical texts are discussed in order to place the theories in their proper historical context. The theories themselves are examined, not as abstract

mathematical discourses, but as writings by individual authors, both well known and obscure, who were influenced by the intellectual and social climate of their time. Among results discussed are the close links of some of the pyramid theories with other theories, such as the theory of evolution, as well as the relationship between the pyramid theories and the struggle against the introduction of the metric system. Of special note is the chapter examining how some theories spread whereas others were rejected. This book has been written to be accessible to a wide audience, yet four appendixes, detailed endnotes and an exhaustive bibliography provide specialists with the references expected in a scholarly work.

In order to develop and exercise their skills urban planners need to draw upon a wide variety of methods relating to plan and policy making, urban research and policy analysis. More than ever, planners need to be able to adapt their methods to contemporary needs and circumstances. This introductory textbook focuses on the need to combine traditional research methods with policy analysis in order to understand the true nature of urban planning processes. It describes both planning methods and their underlying concepts and principles, illustrating applications by reference to the daily activities of planning, including the assessment of needs and preferences of the population, the generation and implementation of plans and policies, and the need to take decisions related to the allocation of land, population change, employment, housing and retailing. Ian Bracken also provides a comprehensive guide to the more specialized research literature and case studies of contemporary urban planning practice. This book was first published in 1981.

The discovery of market needs and the manufacture of a product to meet those needs are integral parts of the same process. Since most textbooks on new product development are written from either a marketing or an engineering perspective, it is important for students to encounter these two aspects of product development together in a single text. *Product Design: Practical Methods for the Systematic Development of New Products* covers the entire new product development process, from market research through concept design, embodiment design, design for manufacture, and product launch.
