"It is never too early to become involved but it can easily be too late." Armed with such alarming statistics as 125 million primary-school age children are not in school; another 150 million children drop out of primary school before they complete four years of education; and almost one-half of the children in the least developed countries of the world do not have access to primary education; the World Bank convened a global conference in April 2000, to address the benefits and challenges of investing in early childhood development. Scientific studies now show how critical the first few years of a child's life are in terms of later physical and mental health, behavior, and capacity to learn. The Millennium Development Goals endorsed by 189 member countries of the United Nations and the World Bank are targets for reducing global poverty. The goals specifically address the need for universal primary education as a means for breaking the cycle of poverty in individual families and in countries. With the publication of this volume, which contains the conference proceedings, the World Bank hopes to encourage a broader investment by countries, companies, organizations and private sector institutions in early child development. Improving the well-being of children is more effective when social care professionals work with the children's parents, families and communities. This collection brings together innovative interventions designed to nurture children's health and welfare, and analyses which types of programmes are most effective and why. The contributors explore the impact of poverty on children's development and assess national initiatives set up to assess and reduce need. They present examples from the UK, US, Canada and Australia of specific interventions to counter or prevent difficulties in the domains of child development, parenting capacity and wider environmental factors. Many contributions demonstrate the importance of engaging with service users and helping communities to shape and direct their own programmes for change. The final section of the book presents useful approaches to assessing and evaluating services. Demonstrating the need for close inter-agency collaboration and 'joined up' services, this book is essential reading for

Prosperity in the world today depends on societies' nurturing of young children. Quality care (stimulation, health, and nutrition) during ages 0 - 5 has a decisive and long-lasting impact on a person's development, ability to learn, and capacity to regulate emotions. Cognitive and noncognitive (social and emotional) skills, set early in life, determine later success. New research in neurobiology and the behavioral and social sciences is converging to enhance this understanding of early child development. Recently, researchers noted epigenetic effects in brain development - that is, the interaction of environment (early experiences) with genetics to shape

brain structure and function - that with proper nurturing would enable people to have competence to create prosperous, sustainable, tolerant, nonviolent, and democratic communities. The World Bank recently hosted a symposium on the priority of early child development for economic growth and equity. The participants urged application of population - based tools and measures to assess the outcomes of children's early years and children's readiness for school. This approach, which shifts the focus from measures of disease, dysfunction, and mortality, is already yielding essential data for designing intervention programs, identifying children at risk, and leveraging policy and investment - to improve the possibilities for all children globally.

Father Involvement in Canada brings together almost two dozen leading scholars of fatherhood issues to examine the roles of Canadian fathers. They look at the experiences of fathers from many angles, considering different ages, ethnicities, marital statuses, gender partnering, and economic brackets, and examining issues such as the impact of poverty, access to paternity leave, and the availability of support from social institutions. By co-considering these dimensions and viewpoints, the book creates a map of

decisions for Canadian families.

Genetics and traditional risk factors such as activity, diet, and tobacco use cannot reliably predict whether we stay healthy or become ill. What then are the primary predictors of adult-onset diabetes, heart attacks, stroke, and many other diseases? The social determinants of health provide the answer: these are the socio-economic conditions that shape the health of individuals, communities, and jurisdictions as a whole. Social determinants establish the extent to which Canadians possess the resources to identify and achieve personal aspirations, satisfy needs, and cope with the environment. This perspective is the key to understanding patterns of health and illness in Canada today. Uniting top academics and high profile experts from across the country, this contributed volume is a unique undertaking that combines analysis of the current state of the social determinants of health, with explication of their effects. The contributions take a public policy approach that sees the mainsprings of health emerging from the social distribution of resources. The collection as a whole integrates insights from the health sciences, the sociology of health, and the political economy of health. Critical areas of investigation: Aboriginal status early life, education, and literacy work and unemployment food security gender health care services housing income and its distribution social safety net social exclusion
