As funny as it is devastating, *How To Speak Money* is a primer and a polemic. It's a reference book you'll find yourself reading in one sitting. After barely half a century of experience, Islamic banking has become established as a new niche industry across the world offering new and sophisticated financial products designed to be compliant with the principles of Islamic legal principles and common law. This comprehensive book explores the theory, principles and practices underpinning this rapidly expanding sector of banking. Expert contributors – including eminent scholars and senior practitioners in the field – examine the roots of the principles of ethical Islamic financial transactions, which have evolved over several millennia, on issues including usury, interest rates, financial contracting for funding enterprises, for mortgages, for leasing and other financial transactions. Regulatory and governance issues are discussed, and the practice and operation of Islamic financial institutions are explained via three distinct case studies. Importantly, the final chapter looks at what steps are being taken to provide professional accreditation to Islamic banking professional personnel, and prescribes requirements for training in this growing industry.

In 2001, after an investment adviser lost \$300,000 of Ian MacDonald's money, he took what was left and self-managed it. His investment objective was to build a stock scoring program that would give him an annual dividend income worth 6% of his portfolio, while increasing the value of that portfolio every year by about 9% (his background was in building commercial risk scoring computer programs for the banks and other businesses). He succeeded in his objective. While he had developed

Online Library Cisi Fundamentals Of Financial Services

that stock scoring program for his own use, in 2019 he used it to help an elderly lady who had suffered a catastrophic financial loss, due to an investment adviser's greed. After much of her loss had been recovered and her monthly income had doubled, she told Ian MacDonald that he needed to write a book to help people like her who knew little about investing and could easily be taken advantage of. He wrote that book. It is called, "Income and Wealth from Self-Directed Investing". He includes that PC stock scoring program with his 300 page book. To further help investors, in the last 100 pages of the book, are charts listing all the companies traded on the TSX that pay a dividend of 3.5% or more. Four sorts of the data in these charts is provided: by score, stock price, dividend percent and by company name. The data sorts make it easy and fast to identify and weigh which stocks are the best ones to add to your portfolio. Like the elderly widow, there are many who fear that they will outlive their life savings? They feel forced to use investment advisers because no one has shown them how to invest safely. Ian MacDonald's book takes away the fear of investing by explaining, the following in easy to understand language: (1) The danger of entrusting your money to an investment adviser whose fees and hidden agenda could drain your savings. (2) Why investing in dividend paying common stock is the safest way for you to invest, as compared to bonds, mutual funds, etc. (3) How to open an online self-directed stock trading account without having to involve bank employees. (4) How to easily find for your portfolio the best twenty stocks for capital gain and the highest

Online Library Cisi Fundamentals Of Financial Services

dividends.(5) How to find and sort potential stock purchases from best to worse, so you can pick the twenty best and safest.(6) How to verify that stocks have no harmful information attached to them that could potentially be a problem if purchased.(7) How to purchase a stock you have carefully chosen, in less than five minutes.(8) How to quickly and easily monitor your purchased stocks on a daily, monthly and quarterly basis.The stock market is not a casino and what Ian MacDonald teaches is not a get rich quick scheme. It is a logical, easy to understand method of investing. Since implementing his scoring system, his portfolio has grown by 300% while generating a steady ever growing retirement income. He thinks every investor should now know exactly what they are invested in and understand why they are invested in it. Through booming times and recessions there is no reason your self-directed portfolio can not generate a reliable monthly income and grow year-after-year.

European Private Equity and Venture Capital Association) the book begins with a brief introduction to the field, including an analysis of current trends and issues in the industry, and goes on to provide a detailed framework for an objective assessment of each business opportunity. The book looks at sources of finance and private equity, shows how to write a successful business plan, details the entire investment process, and considers the tax and legal issues involved. A particular feature of the book is that it looks at the topic from both sides - showing what the venture capitalist is looking for as well as detailing how an entrepreneur or business owner can make proposals attractive to those investors. This means that the reader will be able to minimize time wasted on unnecessary activities and therefore develop investment approaches which are succinct, relevant, and give every chance of success.

Among the topics covered in this volume are the evolution of swap products and participants, discounted cash flows and yields to maturity, the structure of swaps, swap risk analysis, accounting treatment, and governmental taxation and regulation.

What is money, where does it come from, and who controls it? In this accessible, brilliantly argued book, leading political economist Ann Pettifor explains in straightforward terms history's most misunderstood invention: the money system. Pettifor argues that democracies can, and indeed must, reclaim control over money production and restrain the out-of-control finance sector so that it serves the interests of society, as well as the needs of the ecosystem. *The Production of Money* examines and assesses popular alternative debates on, and innovations in, money, such as "green QE" and "helicopter money." She sets out the possibility of linking the money in our pockets (or on our smartphones) to the improvements we want to see in the world around us. The world is currently undergoing an historic energy transition, driven by increasingly stringent decarbonisation policies and rapid advances in low-carbon technologies. The large-scale shift to low-carbon energy is disrupting the global energy system, impacting whole economies, and changing the political dynamics within and between countries. This open access book, written by leading energy scholars, examines the economic and geopolitical implications of the global energy transition, from both regional and thematic perspectives. The first part of the book addresses the geopolitical implications in the world's main energy-

producing and energy-consuming regions, while the second presents in-depth case studies on selected issues, ranging from the geopolitics of renewable energy, to the mineral foundations of the global energy transformation, to governance issues in connection with the changing global energy order. Given its scope, the book will appeal to researchers in energy, climate change and international relations, as well as to professionals working in the energy industry.
