This title provides all the information the reader will need to pass the City & Guilds level 2 diploma in electrical installations. During the 1990s, as the Internet in general and e-mail in particular grew in popularity as a means of communication, a number of Cameroonians residing in various parts of the world established a vibrant and lively electronic forum for the discussion of various issues related to their native land. The forum, known as Camnet, demonstrated that Cameroonians living abroad could actively participate in the political, economic and social processes taking place at home. This ability to remain actively engaged in the development of one's nation through the Internet is what Endeley calls 'virtual activism.' Camnet thus distinguished itself as the first and most influential breeding ground for Cameroonian 'virtual activism.' Although Camnet appeared to be dominated by political discussions, it was a truly multi-dimensional forum. No topic was explicitly forbidden and on some occasions the participants conducted extensive debates on issues that had nothing to do with Cameroon or with politics. In this publication, however, the author has chosen to present only a representative sample of his own contributions from the late 1990s with a direct bearing on Cameroon's development. Some of the contributions are in French and in order to reflect the bilingual nature of the debates that took place on Camnet, these have not been translated into English. The informed reader will be struck by the issues which were being debated over 15 years ago as well as by the fact that some of the predictions the author made in the 1990s are a reality today.

An essential guide to the City & Guilds 2391-50 and 51: Initial Verification and Certification of Electrical Installation and Periodic Inspection and Testing, also C&G 2391-52: an amalgamation of Initial Verification and Periodic Inspection and Testing of electrical installations. There is a full coverage of technical and legal terminology used in the theory exams; including the structure of exam questions and their interpretation. By running through examples of realistic exam questions in a step-by-step fashion, this book explains how to decode the questions to achieve the most suitable response from the multiple-choice answers given. This book is ideal for all electricians, regardless of their experience, who need a testing qualification in order to take the next step in their career.

A Life In Bits is the moving story of one man's battle with bipolar disorder, a condition whose devastating consequences are still not fully appreciated by the world at large. Charles McMullen's battle with manic depression, as it is often known, began with a nervous breakdown at the age of nineteen. In his twenties, the suicide of his brother, his own divorce and the loss of his job and his home put him inside a psychiatric hospital. Yet despite the periods of appalling despair and the continued setbacks, Charles can still write at the end of the book 'Overall, it's been a pretty happy life?'. This inspirational book will be of great interest to anyone who is afflicted by bipolar disorder, or knows one of the many people - roughly one in 25 of the population - who are.

"Validating Second Language Reading Examinations describes the development of an empirical framework for test validation and comparison of reading tests at different proficiency levels through a critical evaluation of alignment with the Common European Framework of Reference (CEFR). It focuses on contextual parameters, cognitive processing operations and test results and identifies parameters for the description of different levels of reading proficiency examinations. The volume explores procedures for linking tests to the CEFR and proposes both qualitative and quantitative methods that complement the procedures recommended in the Council of Europe's Relating Language Examinations to the Common European Framework of Reference for Languages (CEFR): A Manual, piloted in 2003 and revised 2009. Key features of the book include: - a detailed review of the literature on CEFR alignment, vertical scaling, test specifications and test comparability - a comprehensive and coherent approach to the validation of reading tests - an accessible and systematic description of procedures for collecting validity evidence based on a sound theoretical framework - a case study comparing different testing systems targeting the same CEFR level"--

As product specifications become more demanding, manufacturers require steel with ever more specific functional properties. As a result, there has been a wealth of research on how those properties emerge during steelmaking. Fundamentals of metallurgy summarises this research and its implications for manufacturers. The first part of the book reviews the effects of processing on the properties of metals with a range of chapters on such phenomena as phase transformations, types of kinetic reaction, transport and interfacial phenomena. Authors discuss how these processes and the resulting properties of metals can be modelled and predicted. Part two discusses the implications of this research for improving steelmaking and steel properties. With its distinguished editor and international team of contributors, Fundamentals of metallurgy is an invaluable reference for steelmakers and manufacturers requiring high-performance steels in such areas as automotive and aerospace engineering. It will also be useful for those dealing with non-ferrous metals and alloys, material designers for functional materials, environmentalists and above all, high technology industries designing processes towards materials with tailored properties. Summarises key research and its implications for manufacturers Essential reading for steelmakers and manufacturers Written by leading experts from both industry and academia
