equitable environments, where students and teachers can move beyond discipline problems and get down to the real work of learning and teaching.

The year 2020 brought an unprecedented worldwide health crisis through the COVID-19 pandemic that has been affecting all sectors, including education. There were questions surrounding the effectiveness of online trainings for teachers, online teaching practices, the motivation and engagement of students, and the quality of learning and education in these times. Action research emerged to address these concerns, being a systematic process of inquiry using reflection within a cyclical model of planning, acting, implementing, evaluating, and continuous reflection. This method of research is employed with the expertise and passion from educators to better enhance online practices and education while using authentic learning and experiences. Using collaboration, social advocacy, and action research, there is the opportunity to advance teaching for students, families, and communities without a physical context involved. The Handbook of Research on the Global Empowerment of Educators and Student Learning Through Action Research explores successful teaching and learning skills through the method of action research and intersects it with online learning in order to uncover best teaching practices in online platforms. This book showcases educational professionals' action research for solutions in advancing teaching and learning, the practical benefits of action research, recommendations for improving online teaching and learning, and a focus on professional growth as well as social justice advocacy. It highlights important topics including student learning, teacher collaboration, authentic learning, advocacy, and action research in both K-12 and higher education settings. In Practical Application of Classroom Management Theories into Strategies, author George R. Taylor outlines the specific skills educators require for successful classroom management and behavior-control strategies. Research supports the premise that knowledge of effective classroom management techniques and strategies is essential in helping teachers to effectively deal with inappropriate, aggressive, and/or unacceptable classroom behaviors. For new teachers, classroom management is especially critical. In the book the following key elements are named as the cornerstone of successful classroom management for new, as well as seasoned, teachers: 1) how to manage children from diverse backgrounds, 2) how to employ effective strategies to deal with various types of behavior problems, 3) how to effectively assess and diagnose behavioral problems, 4) how to seek professional services, 5) how to effectively communicate with parents, and 6) how to recognize the ways cultural differences impact behavior. The success of these strategies will depend upon the teacher's demonstration of appropriate models, maintenance of a democratic environment, and a proactive approach.

A Practicum in TESOL is a valuable source book for both teacher educators and classroom teachers. It ranges widely across key areas of practice from the nitty-gritty of lesson planning and classroom management, through conceptual areas such as motivation and observation, to crucial if more abstract aspects, such as teachers beliefs and values. It also delves into the moral and political dimensions of teaching.

Discussion of these areas, though well-grounded in relevant academic literatures, is also supported by extensive quotes from real teachers working on their practice. The treatment is sufficiently challenging to interest the experienced teacher, while covering matters of basic practice that would be of concern to the beginner. Anyone doing a TESOL practicum will want to use this book whether as an in-service teacher or as a teacher longing to further their professional development. A Practicum in TESOL can be used individually or in groups.

A primary goal of Teaching Statistics in School Mathematics-Challenges for Teaching and Teacher Education is to describe the essential elements of statistics, teacher's professional knowledge and their learning experiences. Moreover, a research agenda that invites new research, while building from current knowledge, is developed. Recommendations about strategies and materials, available to train prospective teachers in university and in-service teachers who have not been adequately prepared, are also accessible to the reader.
