"This is an extremely well written book combining clinical problems and scenarios with appropriate pathophysiology and associated nursing care. Understanding the mechanisms of disease is essential to appropriate clinical interventions and this book makes physiology both relevant and applicable to clinical nursing." Dr. Ray Higginson, Senior Lecturer in Critical Care, University of Glamorgan. "This book successfully takes a biomedical approach to understanding nursing care, which provides a solid foundation of knowledge. The related activities integrated into the text to facilitate learning also help to place the theory into a real world environment." Anne Waugh, Senior Lecturer, School of Nursing, Midwifery and Social Care, Napier University. "Whilst focusing on the Foundation of Nursing, this engaging and creatively written book illustrates the amazing diversity and complexity of nursing in the 21st Century. Its wide reaching content is presented in a variety of modes that facilitate reflection, critical thinking and foster practical application. As such this book provides nursing students

with a comprehensive resource from which to develop the knowledge and evidence base expertise required to become a qualified nurse." Dawn Freshwater, Professor and Head of School, University of Leeds, Editor Journal Psychiatric mental health nursing "Anatomy and Physiology in Action - These are great, really useful. The explanations are simple, and easy to understand. The diagrams in the book that are anatomy and physiology related are again, clear and easy to understand... The learning objectives, give clear information as to the content of the chapter and what the student can expect to gain from reading the chapter. I would happily recommend this book (to) my fellow students... I would also be happy to recommend this book to any one considering starting their nurse training, and would be more than happy to recommend it to my personal tutor and suggest that it is added to the reading list." Joanne Starkes, 2nd year Nursing Student, Bournemouth University, UK "I think that these (scenarios) are useful because they make the information less theoretical by relating it to a person and following through their medical journey, making it easier to read than a block of more generalised text... I find this style of writing easy to follow as the sections are not too big and they are broken up with bullet points, pictures and information boxes... I would recommend this book to other students - particularly people like myself who struggle with big blocks of texts and books that assume you know everything." Claire McHugh, Student Nurse, Southampton University, UK "The large section on the nurse's role is fantastic as it will give anyone who is just

starting out on the path to becoming a nurse a great insight into this very important role... I found the exercises and small quizzes throughout the book very useful and believe that they would be a good source for revision for students. I was particularly impressed with the inclusion of chapters on the learning disability, mental health and child branches as these are often left out of general nursing books." Vicky Bain, Nursing Student

Nursing Ethics and Professional Responsibility in Advanced Practice, Second Edition is a comprehensive textbook focused on advanced practice nursing ethics. The text proactively addresses challenges that span specialty areas well as issues unique to these areas of practice. This is the only resource available that addresses the range of ethical problems that advanced practice nurses face. Advanced practice nurses (APNs) share the same professional responsibilities that other practicing nurses do, however, given their expanded scope of practice they assume a role with greater responsibility. Advanced practice nurses are often the primary care givers for their patients but even when they are not, they assume total responsibility for some critical aspect of the patient's care. For example, nurse anesthetists are accountable for the safe induction and recovery of their patients (this includes understanding the unique nature of individuals), and diabetic clinical nurse specialists are responsible for the education and management of their especially vulnerable population and for educating others. This text is suitable for a graduate level audience as well as those pursuing a DNP level degree.
