This book presents a case based approach to epilepsy management in both diagnostic challenges and treatment of complex cases. Cases reflect “real life” patient scenarios that practitioners encounter with up-to-date terminology and treatment approaches. With 51 chapters, the book presents 51 unique, nuanced cases. Beginning with an initial presentation of a case history, the book opens with a basis for drawing in multiple aspects in the treatment of patients with epilepsy. Each chapter is organized into a clinical history, physical examination results, and ancillary testing to concentrate on differential diagnosis and focus on a definitive procedural approach to the final diagnosis. Subsequent information about the condition expands on the knowledge of the clinical features to a solution of common patient clinical scenarios as it affects people with epilepsy. A comprehensive successor edition, *Epilepsy Case Studies* is an invaluable resource to clinicians ranging from those looking for a quick review of a topic present in the table of contents, to those crossing disciplines into medical areas where seizures are a symptom of disordered or dysfunctional brain.

A unique tool for teaching and learning the top 100 most teachable topics in internal medicine There are many challenges for residents when training students who are making the big "jump" from preclinical to clinical. Most notably, they need to find time to pick and prepare topics to teach in meaningful ways without the availability of a blackboard in the learning hospital. Students also need to quickly be able to grasp these concepts quickly and with the ability to recall them later. This teaching manual primarily focuses on physiology/pathophysiology/exam findings with the goal of providing content to make teaching and learning on the wards easier for both attendings/senior residents and interns/medical students. It features the 100 most teachable topics (clinical pearls) in an image-based presentation and will cover all the major disciplines of internal medicine, including cardiology, gastroenterology, endocrine, and infectious disease. Each topic, or card, has an image on one side to prompt discussion (ECG, CXR, physical exam finding, etc.), and the flip side

often toxic culture of medicine. Today's physicians have a surprising disdain for technology, an unhealthy obsession with status, and an increasingly complicated relationship with their patients. All of this can be traced back to their earliest experiences in medical school, where doctors inherit a set of norms, beliefs, and expectations that shape almost every decision they make, with profound consequences for the rest of us. *Uncaring* draws an original and revealing portrait of what it's actually like to be a doctor. It illuminates the complex and intimidating world of medicine for readers, and in the end offers a clear plan to save American healthcare.
