There can be no doubt that mobile technologies are here to stay. Global mobile traffic grew 74 percent in 2015 alone, with 563 million devices and connections added -- most of them tablets and Smartphones. This growth has been 4000-fold in the past 10 years and 400 million-fold in the past 15 years (Cisco, 2016). Mobile technologies permeate the lives of 21st century citizens as mainstays of organizational and institutional day-to-day operations, commerce, and communication and as tools used to support individuals' personal, social, and career responsibilities. In both the corporate and educational worlds, e- and m-learning and marketing with mobile technologies are moving forward at breakneck speed with, in many cases, a blurring of traditional sector boundaries. As neither the technology nor the uses are static, exploring practices and policies that underpin this quickly shifting mobile technology context is crucial for ensuring its intelligent, purposeful, and equitable use. This edited book provides a venue for researchers to share their work on mobile learning with a focus on uses for mobiles in informal settings and PK-20 classrooms, language learning, mobile gaming, leadership and policy issues, and what mobile learning in the future may be. It assists researchers and educators to consider and answer questions such as: What is "mobile learning" today? How can mobiles be used to enable learning? How is mobile learning crossing or connecting economic, social, and/or cultural sectors? How do specific cultural practices with media influence mobile learning (e.g., youth practices, educator practices, parent practices, community practices)? What are policy and leadership implications in supporting mobile learning? What policies, practices, and/or pedagogical approaches are necessary to move

forward with mobiles in schools or universities? In what ways is mobile learning impacting education; including how students learn and teachers teach? What will/ should/might mobile learning look like in the future?

neuroinfection, demyelination, stroke and headache. The role of embryogenesis is emphasized in the management of neurological disorders and the cranio-vertebral junction. The chapter on radiation biology and its complications focuses on the emerging field of tumour management. The chapters on vestibular schwannoma and multilevel cervical compressive myelopathy address the debate on the optimal surgical approach.

This updated edition provides clinicians from various backgrounds and levels of training the information needed to optimally diagnose and manage neurologic complications of the nervous system. Organized into seven sections, this comprehensive volume begins with an overview of diagnostic studies for neurologic complications involving the nervous system. That is followed by sections on metastatic and non-metastatic complications of cancer involving the nervous system, and the interpretation, diagnosis, and management of common neuro-oncologic symptoms. The next section reviews the neurologic complications of cancer therapy, including corticosteroids, radiation therapy, chemotherapy, targeted molecular therapies, immunotherapies, hematopoietic stem cell transplantation, and infections involving the nervous system. The final section focuses on the most important neurologic complications in cancers arising from specific organs. In addition to capturing the latest advancements in the rapidly evolving fields of oncology and cancer neurology, the goal of this resource is to lead clinicians toward prompt diagnosis and intervention in order to improve patient quality of life. "This textbook is a valuable resource for medical oncologists and radiation oncologists, as well as neurologists and neuro-oncologists dealing with these patients. ... Overall, the chapters are well organized, clearly written, fairly balanced, and reasonably up to date. ... I would recommend it as a learning tool to physicians in training (medical students, residents, and

fellows) and for more experienced physicians as both a review/ update and a way to gain more in-depth knowledge and insight into the neurologic problems of cancer patients." (John C. Flickinger, International Journal of Radiation Oncology Biology Physics, Vol. 73 (2), 2009) "The general organization of the book is logical and facilitates its practical and everyday use. ... Overall this textbook is very comprehensive and encompasses main neuro-oncological challenges. ... Schiff, Kesari and Wen have edited a very elegant and highly practical textbook, written by recognized authorities in their respective fields, which will be used by a wide range of medical and surgical specialists who are confronted on a daily basis with neurological manifestations of cancer in their practice." (I. Radovanovic and G. Zadeh, British Journal of Cancer, Vol. 100 (6), 2009)

This book provides a step-by-step and practically applicable approach for the accurate and clinically relevant diagnosis of lymph node (LN) and bone marrow (BM) biopsies. Clinicians expect pathological guidance not only with accurate diagnosis, but also about disease progression, minimal residual disease, disease susceptibility to a particular therapy, effects of prior therapy on prognosis and subsequent therapy etc. This book provides brief but to the point guidance about the prognostic and therapeutic implications of key ancillary studies so that the pathologist is comfortable to answer clinician's questions over the entire arc of manifestations and management of the disease. The text follows the WHO (2016) classification in essence but the material is organized in a fashion most useful to a practicing surgical pathologist. This is achieved by focusing on the morphological findings as the starting point. Using this morphological "backbone" and several frequently asked questions (FAQs) the reader is guided to a rational list of differential diagnoses leading to a definitive diagnosis. The contents of each chapter are carefully selected so that the practically important and directly applicable information is available in an easy-to-find and easy-to-grasp format. Practical Lymph Node and Bone Marrow Pathology serves as a practical introduction and handbook for pathology trainees and hematopathology fellows and will remain a useful reference to practicing pathologists when they are signing out lymph nodes or bone marrow specimens. Skeel's Handbook of Cancer Chemotherapy combines in one place the most current rationale and specific details necessary to safely administer chemotherapy for most adult cancers. The handbook is a practical, disease-focused pocket reference that emphasizes the best current medical practice as it relates to the delivery of chemotherapeutic drugs. By focusing on specific plans for treatment, the book is an invaluable resource for the daily care of cancer patients.

Solutions provided in the book are well detailed for the better understanding of the concepts. TOC Solved Paper 2019-2011, 20 Practice Sets This book focuses on the latest progress in chemotherapy for leukemia and

related diseases, including still-ongoing but promising studies. The effectiveness of treatment for chronic myeloid leukemia and acute promyelocytic leukemia has been dramatically improved in recent years. This improvement has been made possible with the development of molecular targeted agents such as bcr-abl tyrosine kinase inhibitors and all-trans retinoic acid. The antibody for the unique target of chemokine receptor 4 for adult T-cell leukemia/lymphoma, or FLT3 inhibitors (signaling inhibitors) has been applied to other leukemias. Also, chemotherapeutic agents including antimetabolite analogues such as clofarabine, and azacitidine (an epigenetic regulator) have undergone progressive development. Meanwhile, the novel concept of therapy targeting leukemic stem cells has been developed. The contributors discuss prospective results of basic and preclinical studies and clinical possibilities based on the effects for leukemic stem cells. This work facilitates a comprehensive understanding of modern treatment methodology for leukemia. The volume therefore will greatly benefit not only hematologists but also oncologists, all physicians who specialize in blood cancer, and pharmacologists who are involved in the development of therapeutic agents for leukemia.

This unique new book uses a series of focussed questions, comprehensive literature evaluations and structured grades of recommendation to provide evidence for the treatment of hematological disorders, both malignant and benign. With contributions from leading international experts who have a real understanding of evidence-based medicine the book provides comprehensive reviews accompanied by clinical commentaries and recommendations on the best treatment regimes to adopt for individual patients. The book is split into two sections: the first examines the methodology underlying evidence based practice, and the second concentrates on the clinical practice of hematology, providing current “best evidence” to guide practice in a series of well-defined clinical situations. This clinical reference is an invaluable source of evidence-based information distilled into guidance for clinical practice which will be welcomed by practitioners, trainees and associated health professionals.

This popular text articulates a powerful theory of critical literacy—in all its complexity. Critical literacy practices encourage students to use language to question the everyday world, interrogate the relationship between language and power, analyze popular culture and media, understand how power relationships are socially constructed, and consider actions that can be taken to promote social justice. By providing both a model for critical literacy instruction and many

"The *Summa Theologica* is the best-known work of Italian philosopher, scholar, and Dominican friar SAINT THOMAS AQUINAS (1225 1274), widely considered the Catholic Church's greatest theologian. Famously consulted (immediately after the Bible) on religious questions at the Council of Trent, Aquinas's masterpiece has been considered a summary of official Church philosophy ever since. Aquinas considers approximately 10,000 questions on Church doctrine covering the roles and nature of God, man, and Jesus, then lays out objections to Church teachings and systematically confronts each, using Biblical verses, theologians,

and philosophers to bolster his arguments. In Volume IV, Aquinas addresses: chastity and lust sobriety and humility pride prophecy and Rapture the passion of Christ Christ's resurrection the sacraments and much more. This massive work of scholarship, spanning five volumes, addresses just about every possible query or argument that any believer or atheist could have, and remains essential, more than seven hundred years after it was written, for clergy, religious historians, and serious students of Catholic thought."

Extensive research into the molecular mechanisms of cancer disease has heralded a new age of targeted therapy. In malignant cells, key proteins that are crucial to tumor growth and survival are now being targeted directly with rationally designed inhibitors. Apart from monoclonal antibodies, small molecule therapeutics such as oncogenic protein kinase inhibitors are attracting a vast amount of investigational attention. This textbook, written by acknowledged experts, provides a broad overview of the small molecules currently used for the treatment of malignant diseases and discusses interesting novel compounds that are in the process of clinical development to combat cancer.

A lot hangs on the summative grades that students are given. A good degree opens doors which otherwise might remain closed. Yet, as higher education is now a mass rather than an elite system, what is expected of its graduates is different from the expectations of previous generations. Students are expected not only to be able to demonstrate high standards of academic achievement, but also a variety of capabilities that have at different times been given labels such as 'generic skills' and 'transferable skills'. These abilities are difficult to grade for a variety of reasons and some graduates may be losing out because their particular strengths are given insufficient acknowledgement in current summative assessment practices. Using the

UK honours degree classifications as a case study, this book appraises the way in which summative assessment in higher education is approached and shows that the foundations of current practices (in the UK and elsewhere) are of questionable robustness. It argues that there is a need to widen the assessment frame if the breadth of valued student achievements is to be recognised adequately.
