This book is the result of the joint efforts of hospitality and tourism academicians of eleven countries in Central and Eastern Europe – all of them members of La Fondation pour la Formation Hôtelière based in Switzerland, which for more than twenty years has supported the development and the evolution of hospitality and tourism education in thirty nine educational institutions across Central and Eastern Europe. The book analyses hospitality and tourism development in various countries in the period of transition (1990-2015). Its main advantage is that the research is conducted by native hospitality and tourism researchers and specialists from each

country. The volume will appeal to a large audience of lecturers, researchers, and students in hospitality and tourism both across Europe and worldwide, as well as to all people interested in Central and Eastern European countries' general development and its specifics during the transition period.

Measuring productivity is often considered a difficult task for industries in the services sectors. This book offers a solution in the form of the 8M approach -- Management, Manpower, Method, Money, Market, Make, Material and Message. This 8M framework is used to analyze the many facets of productivity and make pertinent solutions and suggestions to lift productivity in enterprises, especially those in the retail and food services sectors. This book consists of 10 chapters. Each chapter is an in-depth study of a specific measure, be it a technological system, a manpower strategy or a marketing program to improve the performance and productivity of small and medium enterprises (SMEs) in the retail and food services sectors in Singapore. Technology-driven solutions are the highlight of this book. Every study presented involves field work in terms of surveys, interviews or focus group discussions with stakeholders. The findings of the studies lead to policy recommendations and suggestions for improving the productivity performance of SMEs in the retail and food services sectors. On the front lines of product liability disputes, successful litigation planning begins with immediate access to the product liability laws of various jurisdictions--plus an understanding of the countless differences among them. That's exactly what you get with the thoroughly up-to-date and expanded edition of *Product Liability Desk Reference, 2019 Edition*, edited by Morton F. Daller. Whether you represent the plaintiff or defendant, the *Product Liability Desk Reference, 2019 Edition* is a comprehensive resource that provides the most recent statutory and case law developments on product liability laws for each of the fifty states and the District of Columbia. With coverage that is clear and concise, you will be able to make an initial assessment of the strengths and weaknesses of your case across jurisdictions. Practitioner-oriented, and written by leading state experts, each chapter summarizes the variants and developments particular to a specific state jurisdiction, resulting in a text that will assist you in making critical choices in product liability disputes

Businesses consistently work on new projects, products, and workflows to remain competitive and successful in the modern business environment. To remain zealous, businesses must employ the most effective methods and tools in human resources, project management, and overall business plan execution as competitors work to succeed as well. Advanced Methodologies and Technologies in Business Operations and Management provides emerging research on business tools such as employee engagement, payout policies, and financial investing to promote operational success. While highlighting the challenges facing modern organizations, readers will learn how corporate social responsibility and utilizing artificial intelligence improve a company's culture and management. This book is an ideal resource for executives and managers, researchers, accountants, and financial investors seeking current research on business operations and management.

Now, there's a comprehensive, objective, and reliable tutorial and reference for the entire field of technical analysis. For traders, researchers, and serious investors alike, this is the definitive book on technical analysis. Individual investors and professional investment managers are increasingly recognizing the value of technical analysis in identifying trading opportunities. Moreover, the SECs requirement for analysts and brokers to pass Section 86 exams can now be fulfilled with the Chartered Market Technician (CMT) certification. Author Charles D. Kirkpatrick II has spent decades using technical analysis to advise major investing institutions -- and he currently teaches the subject to MBA candidates, giving him unique insight into the best ways of explaining its complex concepts. Together with university finance instructor and CMT Dr. Julie Dahlquist, Kirkpatrick systematically explains the theory of technical analysis, presenting academic evidence both for and against it. Using 200+ illustrations, the authors explain the analysis of markets and individual issues, and present a complete investment system and portfolio management plan. Readers will learn how to use tested sentiment, momentum indicators, seasonal affects, flow of funds, and many other techniques. The authors reveal which chart patterns and indicators have been reliable; show how to test systems; and demonstrate how technical analysis can be used to mitigate risk.

The globally escalating population necessitates production of more goods and services to fulfil the expanding demands of human beings which resulted in urbanization and industrialization. Uncontrolled industrialization caused two major problems – energy crisis and accelerated environmental pollution throughout the world. Presently, there are technologies which have been proposed or shown to tackle both the problems. Researchers continue to seek more cost effective and environmentally beneficial pathways for problem solving. Plant kingdom comprises of species which have the potential to resolve the couple problem of pollution and energy. Plants are considered as a potential feedstock for development of renewable energy through biofuels. Another important aspect of plants is their capacity to

sequester carbon dioxide and absorb, degrade, and stabilize environmental pollutants such as heavy metals, poly-aromatic hydrocarbons, poly-aromatic biphenyls, radioactive materials, and other chemicals. Thus, plants may be used to provide renewable energy generation and pollution mitigation. An approach that could amalgamate the two aspects can be achieved through phytoremediation (using plants to clean up polluted soil and water), and subsequent generation of energy from the phyto-remediator plants. This would be a major advance in achieving sustainability that focuses on optimizing 'people' (social issues), 'planet' (environmental issues), and 'profit' (financial issues). The "Phytoremediation-Cellulosic Biofuels" (PCB) process will be socially beneficial through reducing pollution impacts on people, ecologically beneficial through pollution abatement, and economically viable through providing revenue that supplies an energy source that is renewable and also provides less dependence on importing foreign energy (energy-independence). The utilization of green plants for pollution remediation and energy production will also tackle some other important global concerns like global climate change, ocean acidification, and land degradation through carbon sequestration, reduced emissions of other greenhouse gases, restoration of degraded lands and waters, and more. This book addresses the overall potential of major plants that have the potential to fulfil the dual purposes of phytoremediation and energy generation. The non-edible bioenergy plants that are explored for this dual objective

include *Jatropha curcas*, *Ricinus communis*, *Leucaena leucocephala*, *Milletia pinnata*, *Canabis sativa*, *Azadirachta indica*, and *Acacia nilotica*. The book addresses all possible aspects of phyto-remediation and energy generation in a holistic way. The contributors are one of most authoritative experts in the field and have covered and compiled the best content most comprehensively. The book is going to be extremely useful for researchers in the area, research students, academicians and also for policy makers for an inclusive understanding and assessment of potential in plant kingdom to solve the dual problem of energy and pollution.

Additive manufacturing (AM) of metals and composites using laser energy, direct energy deposition, electron beam methods, and wire arc melting have recently gained importance due to their advantages in fabricating the complex structure. Today, it has become possible to reliably manufacture dense parts with certain AM processes for many materials, including steels, aluminum and titanium alloys, superalloys, metal-based composites, and ceramic matrix composites. In the near future, the AM material variety will most likely grow further, with high-performance materials such as intermetallic compounds and high entropy alloys already under investigation. *Additive Manufacturing Applications for Metals and Composites* is a pivotal reference source that provides vital research on advancing methods and technological developments within additive manufacturing practices. Special attention is paid to the material design of additive manufacturing of parts, the

While highlighting topics such as numerical modeling, intermetallic compounds, and statistical techniques, this publication is ideally designed for students, engineers, researchers, manufacturers, technologists, academicians, practitioners, scholars, and educators. This book first focuses on the explanation of the theory about focal mechanisms and moment tensor solutions and their role in the modern seismology. The second part of the book compiles several state-of-the-art case studies in different seismotectonic settings of the planet. The assessment of seismic hazard and the reduction of losses due to future earthquakes is probably the most important contribution of seismology to society. In this regard, the understanding of reliable determination seismic source and of its uncertainty can play a key role in contributing to geodynamic investigation, seismic hazard assessment and earthquake studies. In the last two decades, the use of waveforms recorded at local-to-regional distances has increased considerably. Waveform modeling has been used also to estimate faulting parameters of small-to-moderate sized earthquakes.
