The sub-title of this symposium is accurate and, in a curious way, promises more than it states: Classical Physicist, Modern Philosopher. Heinrich Hertz, as the consummate experimentalist of 19th century technique and as brilliant clarifying critic of physical theory of his time, achieved one of the fulfillments but at the same time opened one of the transition points of classical physics. Thus, in his 'popular' lecture 'On the Relations Between Light and Electricity' at Heidelberg in the Fall of 1889, Hertz identified the ether as henceforth the most fundamental problem of physics, as the conceptual mystery but also the key to understanding mass, electricity, and gravity. Of Hertz's demonstration of electric waves, Helmholtz told the Physical Society of Berlin: "Gentlemen! I have to communicate to you today the most important physical discovery of the century. " Hertz, philosophizing in his direct, lucid, pithy style, once wrote "We have to imagine". Perhaps this is metaphysics on the horizon? In the early pages of his Principles of Mechanics, we read A doubt which makes an impression on our mind cannot be removed by calling it metaphysical: every thoughtful mind

as such has needs which scientific men are accustomed to denote as metaphysical. (PM23) And at another place, concerning the terms 'force' and 'electricity' and the alleged mystery of their natures, Hertz wrote: We have an obscure feeling of this and want to have things cleared up.

Get ready to test your powers of observation — again! Here are 25 more pairs of full-color illustrations of classic covers from The Saturday Evening Post, one with up to 18 subtle changes from the unaltered original art.

Radioactive Isotopes in the Localization of Tumours covers the proceedings of the 1967 International Nuclear Medicine Symposium, held at the Imperial College of Science and Technology, London, organized by the Institute of Cancer Research in association with the Royal Marsden Hospital. This book is composed of three parts encompassing 40 chapters. After an introduction to the principles of scanning and physical problems, this book goes on describing the physical aspects of mechanical scanning systems, collimators, cameras, autofluorescope, and photoscanner. The second part reviews the radioactive materials for tumor localization. This part specifically examines the technique of regional oxygenation, mercury-197 chlormerodrin, and TRIGA reactor. The third part is devoted to the clinical aspects of tumor diagnosis. This book is of value to physicists, engineers, chemists, and clinicians.

The recent demise of the independent television companies and the expansion of satellite and cable networks has led to an explosion in small, independent production facilities. In parallel with this development has been a steady increase in media training and a major expansion in corporate video facilities. The Video Studio is written for everyone contemplating setting-up a professional installation, whether studio or location based. The Video Studio shows how to estimate the scale of investment required and, depending on the nature and frequency of use of the facility, the layout of technical areas and the function of the main items of equipment is described in easy to understand language. In short this is a nuts and bolts approach to planning and operating a studio of 150 square metres or less. Completely updated to take account
