mitigation and control. The heart of HRA will always be to find creative ways of helping designers, management, operators, and authorities increase the safety and profitability of technological systems. Drawing on his personal experience, Spurgin reviews HRA from the viewpoint of the operator. The book uses examples from the nuclear industry, always on the forefront of safety, and translates how to apply the concepts to other high risk industries.

The use of the computer in translating natural languages ranges from that of a translator's aid for word processing and dictionary lookup to that of a full-fledged translator on its own. However the obstacles to translating by means of the computer are primarily linguistic. To overcome them it is necessary to resolve the ambiguities that pervade a natural language when words and sentences are viewed in isolation. The problem then is to formalize, in the computer, these aspects of natural language understanding. The authors show how, from a linguistic point of view, one may form some idea of what goes on inside a system's black box, given only the input (original text) and the raw output (translated text before post-editing). Many examples of English/French translation are used to illustrate the principles involved.

This book constitutes the refereed proceedings of the 13th International Conference on Practice and Theory in Public Key Cryptography, PKC 2010, held in Paris, France, in May 2010. The 29 revised full papers presented were carefully reviewed and selected from 145 submissions. The papers are organized in topical sections on encryption; cryptanalysis; protocols; network coding; tools; elliptic curves; lossy trapdoor functions; discrete logarithm; and signatures.

This book constitutes the refereed proceedings of the 7th International Symposium, Latin American Theoretical Informatics, LATIN 2006, held in March 2006. The 66 revised full papers presented together with seven invited papers were carefully reviewed and selected from 224 submissions. The papers presented are devoted to a broad range of topics in theoretical computer science with a focus on algorithmics and computations related to discrete mathematics as well as on cryptography, data compression and Web applications.

18 years GATE Computer Science & Information Technology Chapter-wise & Topic-wise Solved Papers (2017 - 2000) is the 4th fully revised & updated edition covering fully solved past 18 years question papers (all sets totalling to 24 papers) from the year 2017 to the year 2000. The revised edition has been updated with (i) 2 sets of 2017 papers, (ii) chapters are further converted into topics, (iii) order of questions reversed from 2000-17 to 2017-00. The book has 3 sections - General Aptitude, Engineering Mathematics and Technical Section. Each section has been divided into chapters which are further divided into Topics. Aptitude - 2 parts divided into 9 Topics, Engineering Mathematics - 8 Topics and Technical Section - 11. Each chapter has 3 parts - Quick Revision Material, Past questions and the Solutions. The Quick Revision Material list the main points and the formulas of the chapter which will help the students in revising the chapter quickly. The questions are followed by detailed solutions to each and every question. In all the book contains 1800+ MILESTONE questions for GATE CSIT.

This title contains an Access Code along with instructions to access the Online Tests. The thoroughly revised & updated 12th edition of 25 years CAT Topic-wise Solved Papers (2018-1994) with 6 Online Practice Sets consists of past years solved papers of CAT from 1994 to 2018 distributed into 3 Units, which are further divided into 24 topics. The CAT 2018 paper with detailed solutions has been added in the

book. The book contains more than 3100+ Milestone Problems for CAT with detailed solutions. Alternative solutions are provided at various places. The focus of the book is to provide shortcuts and techniques which are a must to Crack CAT. Finally the book provides 6 Online tests - 3 Sectional and 3 Full Practice Sets based on the latest pattern with Solutions.

Biomedical informatics is becoming increasingly important as healthcare organizations worldwide implement biomedical informatics applications as part of their continued effort to improve the effectiveness of patient care and the efficiency of service delivery. This book presents the full papers delivered at the 2013 International Conference on Informatics, Management and Technology in Healthcare (ICIMTH 2013), held in Athens, Greece, in July 2013. The scope of biomedical informatics is very broad, including a number of technologies such as imaging, sensors, biomedical equipment and even organ transplant technology. The 90 papers included here examine research and applications outcomes - from cell to population - in these diverse fields, and because management and organizational issues play an important role in the implementation phase of biomedical informatics applications, these topics are also covered as an integral part of the theme. The book will be of interest to all those whose work involves the development and use of biomedical informatics applications.
