Designed for mathematics majors and other students who intend to teach mathematics at the secondary school level, *College Geometry: A Unified Development* unifies the three classical geometries within an axiomatic framework. The author develops the axioms to include Euclidean, elliptic, and hyperbolic geometry, showing how geometry has real and far-reaching implications. He approaches every topic as a fresh, new concept and carefully defines and explains geometric principles. The book begins with elementary ideas about points, lines, and distance, gradually introducing more advanced concepts such as congruent triangles and geometric inequalities. At the core of the text, the author simultaneously develops the classical formulas for spherical and hyperbolic geometry within the axiomatic framework. He explains how the trigonometry of the right triangle, including the Pythagorean theorem, is developed for classical non-Euclidean geometries. Previously accessible only to advanced or graduate students, this material is presented at an elementary level. The book also explores other important concepts of modern geometry, including affine transformations and circular inversion. Through clear explanations and numerous examples and problems, this text shows step-by-step how fundamental geometric ideas are connected to advanced geometry. It represents the first step toward future study of Riemannian geometry, Einstein's relativity, and theories of cosmology.

Living My Dream is a true-to-life story. The author takes us step-by-step through the events of his life from childhood in a tiny village of Greece to retirement in the USA and beyond. Occasionally, throughout the book and in his epilogue, he allows us to take a peek at his personal philosophy regarding God, truth, justice, science and our universe in general. Here, he introduces unconventional, yet convincing, ideas to support his philosophy. Most noticeable however is his candid and clear recounting of the events of poverty and hardship throughout his youth. At times, the story becomes almost incredible and we cannot help wonder whether or not those conditions existed indeed in the 1940s and 1950s when he grew up and attended high school, or at the time he worked and attend college at the same time. As a child and as a teenager, he lived through two civil wars and during the German occupation of the land that left him with lasting memories related to those dreadful events. He witnessed the worst form of human brutality perpetuated by men against their fellow men and he was the onlooker of death and destruction of property at the time he was trying to receive his elemental and high school education. He was not able or was not allowed to quench his thirst for higher education in Greece, and against all odds, he migrated to the USA to satisfy the

desire for his college education. Without financial support and ignorant of the English language, he arrived in Chicago in 1959 and fought to finance his schooling and to receive his BA. He has been a member of the Food Technology Institute, recognized by Who's Who in America, and in addition to being chemist, he became Packaging Engineer by attending the packaging school of Michigan State University. Living My Dream is truly a compelling story narrating the life story of a young man who struggles to survive and to receive his education under unfavorable social climate. His life story is intertwined with his dream to accomplish things in life, regardless of the obstacles that presented themselves along the way, and is the incarnation of what he believes.

"Everything is possible, if you have the desire, provided, your expectations from yourself are real", he says. To say the least, his narrative makes us appreciate all the freedoms and opportunities our democratic system offers to all of us, things we are taking for granted.
