This text concentrates on reading the more involved working drawings of various types of commercial buildings.

The world of construction is intrinsically linked with that of finance, from the procurement and tendering stage of projects right through to valuation of buildings. In addition to this, things like administrations, liquidations, mergers, take-overs, buy-outs and floatations affect construction firms as they do all other companies. This book is a rare explanation of common construction management activities from a financial point

of view. While the practical side of the industry is illustrated here with case studies, the authors also take the time to build up an understanding of balance sheets and P&L accounts before explaining how common tasks like estimating or valuation work from this perspective. Readers of this book will not only learn how to carry out the tasks of a construction cost manager, quantity surveyor or estimator, they will also understand the financial logic behind them, and the motivations that drive senior management. This is an essential book for students of quantity surveying or construction management, and all ambitious practitioners.

GREEN BUILDING: PRINCIPLES AND PRACTICES IN RESIDENTIAL CONSTRUCTION provides a current, comprehensive guide to this exciting, emerging field. From core concepts to innovative applications of cutting-edge technology and the latest industry trends, this text offers an in-depth introduction to the construction of green homes. Unlike many texts that adopt a product-oriented approach, this book emphasizes the crucial planning, processes, and execution methods necessary for effective, environmentally sound construction. This text demonstrates that Earth-friendly products and energy-efficient materials take planning in order to make a building truly green. This visionary text helps students and professionals develop the knowledge and skills to think green from start to finish, empowering and inspiring them to build truly sustainable homes.

Budget report for 1929/31 deals also with the operations of the fiscal year ended June 30, 1928 and the estimates for the fiscal year ending June 30, 1929.

Popular Science gives our readers the information and tools to improve their technology and their world. The core belief that Popular Science and our readers share: The future is going to be better, and science and technology are the driving forces that will help make it better.

As the construction industry continues to develop within the natural environment, the industry has to take strong measures to ensure that its activities are in harmony with the environment. The challenge for the construction sector is not just to respond to the need for adequate housing and rapid urbanisation, but to do it in a way that is socially and ecologically responsible. This book begins with the current progress of the construction industry in Malaysia before shifting to the fragile relationship between construction and environment. Knowing the rapid development in Malaysia and how construction can affect the environment, this book delves into some evidence of environmental degradation in Malaysia. In the mist of degradation, there is some light shone by the government agencies, state government and some construction players who have initiated several actions to improve present situation. Construction players must be ready to address these concerns, aware of the requirements and comply with it, while the government must be ready to implement and enforce the requirement.

An effective planning, implementation and monitoring is vital if the environment is to be part of the culture of the construction industry everywhere.

It is impossible to trisect angles with straightedge and compass alone, but many people try and think they have succeeded. This book is about angle trisections and the people who attempt them. Its purposes are to collect many trisections in one place, inform about trisectors, to amuse the reader, and, perhaps most importantly, to reduce the number of trisectors. This book includes detailed information about the personalities of trisectors and their constructions. It can be read by anyone who has taken a high school geometry course.

your spouse, children or friends, there is no better way to do it than spend sometime with them around a simple wooden house in a secluded environment. On top of bonding with family and friends, a wooden house provides the perfect resting place after a successful hunting trip. Wooden houses can be built anywhere on earth regardless of the natural phenomena experienced there. For instance, you can build the house in areas prone to earthquakes and rest assured that nobody will be severely injured or die in case of an earthquake. Even if the house is brought to the ground by an earthquake, there is minimal probability of anybody being injured with wooden walls and roof. Repairing wooden houses is also quite cheap when compared to repair of houses built with concrete, blocks, bricks or any other construction material. This means that you'll end up saving money by simply deciding to build a wooden house. It is also quite easy to alter the design of a wooden house than houses built using other materials. If you want special features in a home, all you need to do is make sure that you own a wooden house and then install all the features you want. With the book "How to Build a Simple Wooden House," you'll have everything required to construct a wooden house anywhere in the world. The book contains step by step guidelines on how you can build such a house from scratch. Start your journey to owning your dream home by reading the book: How to Build a Simple Wooden House!!!
