Playwrights for Tomorrow was first published in 1973. Minnesota Archive Editions uses digital technology to make long-unavailable books once again accessible, and are published unaltered from the original University of Minnesota Press editions. This volume presents four plays by writers who have worked under the program of the Office for Advanced Drama Research (O.A.D.R.) at the University of Minnesota, an experimental project which provides promising playwrights with the opportunity of working with cooperating theatres in the production of their plays. Arthur H. Ballet, the editor, is director of the O.A.D.R. The plays in this volume and the theatres which cooperated in their production are *Boxes* by Susan Yankowitz, Magic Theatre, Berkeley, California; *Canvas* by David Roszkowski, Scorpio Rising Theatre, Los Angeles; *Bierce Takes on the Railroad!* by Philip A. Bosakowski, Theatre III, College of Marin, Kentfield, California; and *Chamber Piece* by John O'Keefe, Magic Theatre, Berkeley, California. In an introduction Professor Ballet discussed the program and accomplishments of the O. A.D.R., which was established with the aid of a Rockefeller Foundation grant. He writes: "It seemed obvious that no artist worked in more lonely isolation and needed more direct contact with the theatre than the playwright. Despite loud pronouncements . . . that theatres outside of New York were searching for new plays and writers, the evidence indicates that very few theatres really wanted to work with unknown but living playwrights. The O.A.D.R., in its

small way, has tried to open a highway . . . between new, often untried writers and willing, even brave theatres. As Speech and Drama (England) pointed out in a review of earlier volumes of the Playwrights for Tomorrow series: "Schemes like this one at Minnesota deserve the highest praise. On the evidence of these volumes, the executive committee which operates this venture is not attempting to impose any single imprint on its authors—a further example of the generosity of the patronage."

Does your child:

- Have impressive intellectual abilities but seem puzzled by ordinary interactions with other children?
- Have deep, all-absorbing interests or seemingly encyclopedic knowledge of certain subjects?
- Bring home mediocre report cards, or seem disengaged at school, despite his or her obvious intelligence?

If you answered "yes" to these questions, this book is for you. Author Katharine Beals uses the term "left-brain" to describe a type of child whose talents and inclinations lean heavily toward the logical, linear, analytical, and introverted side of the human psyche, as opposed to the "right brain," a term often associated with our emotional, holistic, intuitive, and extroverted side. Drawing on her research and interviews with parents and children, Beals helps parents to discover if they are

raising a left-brain child, and she offers practical strategies for nurturing and supporting this type of child at school and at home. Beals also advises parents in how best to advocate for their children in today's schools, which can be baffled by and unsupportive of left-brain learning styles.

the teacher, the learner, and instructional materials (hence the metaphor of a matrix). Each chapter discusses and examines the theoretical and practical dimensions of a central issue in language teaching. Among the topics covered are curriculum development, designing instructional materials, teaching listening, speaking, reading and writing, the nature of effective teaching, self-monitoring in teacher development, and language and content. Richards presents key issues in an accessible and highly readable style, and shows how teachers and teachers-in-training can be involved in the investigation of classroom teaching and learning. The emphasis is not on prescriptions but rather on developing effective teaching through understanding the various factors that interact in second language learning and in the second language classroom. Toward the end of his life, the Russian psychologist L.S. Vygotsky turned away from his earlier work that he has become famous for only to sow the seeds for a new theory. In this theory, affect was to play a central role, there was to be a primacy of social relations, and anything mental (mind, thought, self, other, knowledge) was an event rather than a thing. This is essentially a transactional perspective. In this book, the author articulates a transactional psychology of education drawing on the works of G.H. Mead, J. Dewey, G. Bateson, F. Mikhailov, and E. Il'enkov. All theoretical positions are developed out of videotaped exchanges, thereby giving concrete character to every psychological concept articulated.

Order Without Rules establishes the basic terms for a critical discourse between the theory of communicative action and the tradition of practice-based inquiries inspired by Wittgenstein and elaborated within the field of ethnomethodology. It argues that such a discourse not only is possible, but that it is essential if critical theory is to move beyond the crisis caused by the decline of the great rationalist social projects of the past two centuries and the simultaneous rise of an array of post-enlightenment and anti-rationalist movements waiting to take their place. Since Max Weber social theory has been faced with a paradox—the “problem of rationality”—that seems to challenge the very foundations of critical and humanist visions of modern society. According to Weber, as industrial societies develop they increasingly are dominated by rational procedures for the production of goods, the organization of human resources, and the management of information. The paradox consists in the fact that while modern society is, in this instrumental sense, becoming more rationalized, the prospects for developing political and cultural institutions which are linked to a progressive vision of rational discourse and democratic-will formation are diminished. Order Without Rules addresses the “problem of rationality” in its most contemporary incarnation: the critical theory of the German philosopher and social critic, Jürgen Habermas. Habermas attempts to resolve the Weberian paradox by identifying the

rational “core” of communication with universal processes of interpretive understanding that are present in everyday conversation. Drawing upon the work within the Wittgensteinian and ethnomethodological traditions of linguistic and social analysis, this book questions whether the logic of language underlying Habermas’s theory of communicative action is in fact the defining feature of conversational practice. It is argued that Habermas’s conception of linguistic rules and their connection to rational action is ill-founded, and that a fundamental rethinking of his concept of communicative action is therefore required. Throughout the book, a reflexive orientation is maintained toward questions of method and the internal relationship between disciplinary practices and empirical phenomena.

Ramone Ramone wasn’t having a good day, but then, that was nothing new. Pouring himself a drink and lighting another cigarette, he takes a moment to review the case: A half-baked artist has an apartment full of slashed paintings, another suit took a wrong turn out of a high window, and his favorite pawn shop isn’t as safe as it used to be. To make things worse, his best hope to unravel things is a space-cadet hippy that never left the seventies and a dead cat with a diamond collar. With one foot on the pavement and the other in a glass of whiskey, Ramone is left to tie it all together. At least he has his girlfriend Li, and Jerome, the best partner the sixth grade ever produced. Maybe the life of a private eye isn’t so bad after all – but what does any of this have to do with a duck?
