This book is an adaptation of the successful US text Cost Management by Hilton, Maher and Selto, written specifically for an international audience. Major improvements include: Diverse and truly international examples of organizations - Examples used throughout the book are from all over the world and represent manufacturing, retail, not-for-profit, and service firms in many different countries. Completely restructured and rewritten text - The book has been rewritten, restructured and also shortened significantly to align content closer with international courses. Integral use of spreadsheets - Spreadsheet software is used for explaining techniques and making applications more realistic. In depth research - Summaries of international research studies that address important cost management issues have been updated and more references to recent research findings have been added. Intuitive explanation of accounting - The authors show directly how events impact the balance sheet and profit and loss account. This book explains how True Cost Accounting is an effective tool we can use to address the pervasive imbalance in our food system. Calls are coming from all quarters that the food system is broken and needs a radical transformation. A system that feeds many yet continues to create both extreme hunger and diet-related diseases, and one which has significant environmental impacts, is not serving the world adequately. This volume argues that True Cost Accounting in our food system can create a framework for a systemic shift. What sounds on the surface like a practice relegated to accountants is ultimately a call for a new lens on the valuation of food and a new relationship with the food we eat, starting with the reform of a system out of balance. From the true cost of corn, rice and water, to incentives for soil health, the chapters economically compare conventional and regenerative, more equitable farming practices in and food system structures, including taking an unflinching look at the true cost of cheap labour. Overall, this volume points towards the potential for our food system to be more human-centred than profit-centred and one that has a more respectful relationship to the planet. It sets forth a path forward based on True Cost Accounting for food. This path seeks to fix our current food metrics, in policy and in practice, by applying a holistic lens that evaluates the actual costs and benefits of different food systems, and the impacts and dependencies between natural systems, human systems, agriculture and food systems. This volume is essential reading for professionals and policymakers involved in developing and reforming the food system, as well as students and scholars working on food policy, food systems and sustainability.

Provides a consolidated legal analysis of the convergence phenomenon between telecommunications services and audiovisual services in the international trade arena.

This book considers how the practical and public policy relevance of research might be increased, and academics and practitioners can better engage to define research agendas and deliver findings relevant to accounting and accountability in the public services. To do so, an international comparative analysis of the research-practice gap in public sector accounting has been undertaken. This involved academic perspectives from over twenty countries, and practitioner perspectives from leading international professional accounting bodies actively involved in the public services arena. It was found that research is valued for informing practice, but engaging at a high level of policy engagement has been primarily by a small group of experienced researchers. For other researchers the impact accomplished may not always be valued highly in the academic community relative to other, more scholarly, activities. The book therefore looks at how engagement and impact between academics and practitioners can be increased.

Managerial cost accounting is the financial and managerial tool that is used to estimate the organizational cost of products and services in business and government. In recent decades, cost accounting in the United States and other advanced industrial countries has been dominated by discussions of Activity Based Costing or ABC. While ABC can be shown to produce a more accurate estimate of cost than older and more basic types of cost accounting, ABC is not used extensively in many governments. We argue that this recent focus on ABC has stifled examination and discussion of how government cost accounting is being used and how it could be used in practice. The study of cost accounting practice reveals an important and underexplored area of financial management in government. Given the scandals that cost accounting estimates can create and that different types of cost accounting can create different estimates of cost it may be reasonable to ask whether the cost accounting exercise is worth it? Cost Accounting in Government: Theory and Applications addresses these unusual and unusually important topics through a series of studies of different government cost accounting practices. The first section of the book presents two chapters on the history and basic elements of cost accounting. The second section of the book provides further discussion and case studies of actual cost accounting practices in the main areas that cost accounting has been used in government: benchmarking the performance of government services, rate setting, grant overhead cost recovery, and cost management. The last two chapters discuss cost accounting practices in Europe and the future of cost accounting. These cases span local and federal governments and provide a much needed context to the study of cost accounting in government. Aimed at academics, researchers and policy makers in the fields of Accounting, Public Administration, and Government Studies, Cost Accounting in Government: Theory and Applications seeks to address the practical and theoretical gap in government cost accounting research with case studies of different public agencies that are using cost accounting for different purposes. The case studies illustrate that different purposes for cost accounting create unique and interesting cost accounting practices. The case studies provide useful examples of actual cost accounting systems that can inform both research and instruction

Management Accounting is written for students in international Business Management study programs. It covers the widely applied syllabus of Cost Accounting and Management Accounting at universities on bachelor's and master's level. The book is based on more than 20 years' academic teaching experience in Germany and at international universities in South Africa, Malaysia, China, the Netherlands and South Korea. In this text book, the application of methods and instruments comes first. Management Accounting follows a case study based approach. All cases are taken from previous exam papers and explained in detail. The text book starts with a case study of a manufacturing company and compares Financial Accounting to Management Accounting. It covers two point of views: (1) a General Management view, with aspects of business planning, cost-volume-profit analysis, degree of operating leverage, mergers and cross-border acquisitions and risk valuation. (2) a Cost Accounting view with Management Accounting systems, flexible budgeting, cost allocations, performance measurement and monitoring, reporting, calculation, manufacturing accounting (job order and process costing), activity based costing and multi-level contribution margin Accounting. On the UVK website, numerous exam tasks and complete solutions thereto are available in English.
