The thesis of Kristina Reimer provides a comprehensive analysis of asymmetric cost behavior (also known as cost stickiness) by discussing its origin and development in the theoretical and empirical research from the 1920s of the past century up until today. Further, using an empirical approach, she investigates the implications of asymmetric cost behavior for credit and financial risk of a firm. In addition, she provides an introduction into credit risk fundamentals by focusing on credit default swaps. Thereby she analyses the development of credit default swap market as well as the components of credit spreads. Finally, she provides several suggestions for future research.

Cost Accounting: A Managerial Emphasis.

Introductory Accounting adopts a measurement approach to teaching graduate students the basics of accounting. Integrating both financial and managerial principles from the U.S. and around the globe, it links accounting to other areas of business (such as finance, operations, and management). Providing students with the context to understand how and why accounting is a valuable part of business, readers will gain an understanding of accounting's role in financial analysis and managerial decision-making. Tinkelman discusses accounting as an imperfect measurement system, offering guidance on how quantitative data can benefit analysts and managers when used with an understanding of its limitations. The book is strongly grounded in research, and also draws on plenty of examples and cases to bring these issues to life. The conversational style of Introductory Accounting will appeal to MBA students, while key terms and illustrative problems make assignments easy for instructors. Additional materials for students and instructors are available on the book's companion website.

Defining the value of an entire company can be challenging, especially for large, highly competitive business markets. While the main goal for many companies is to increase their market value, understanding the advanced techniques and determining the best course of action to maximize profits can puzzle both academic and business professionals alike. Valuation Challenges and Solutions in Contemporary Businesses provides emerging research exploring theoretical and practical aspects of income-based, market-based, and asset-based valuation approaches and applications within the financial sciences. Featuring coverage on a broad range of topics such as growth rate, diverse business, and market value, this book is ideally designed for financial officers, business professionals, company managers, CEOs, corporate professionals, academicians, researchers, and students seeking current research on the challenging aspects of firm valuation and an assortment of possible solution-driven concepts.

Management and cost accounting has been the basic toolbox in business administration for decades. Today it is an integral part of all curricula in business education and no student can afford not to be familiar with its basic concepts and instruments. At the same time, business in general, and management accounting in particular, is becoming more and more international. English clearly has evolved as the "lingua franca" of international business. Academics, students as well as practitioners exchange their views and ideas, discuss concepts and communicate with each other in English. This is certainly also true for cost accounting and management accounting. Management Accounting is becoming increasingly international. "Management and Cost Accounting" is a new English language textbook covering concepts and instruments of cost and management accounting at an introductory level (Bachelor, but also suited for MBA courses due to strong focus on practical applications and cases). This textbook covers all topics that are relevant in management accounting in business organizations and that are typically covered in German and Central European Bachelor classes on cost accounting and management accounting. After an introduction to the topic, including major differences between the German approach and the purely Anglo-Saxon approach of management accounting, the book describes different cost terms and concepts applied in German cost accounting. The book is much more specific here compared to US-American standard textbooks. Based on different cost concepts, the topic of cost behavior is discussed, including the determination of cost functions. The heart of the book guides the reader through the general structure of a fully developed cost accounting system following the German and Central European standard: It starts with cost type accounting, moves on to cost center accounting and finally deals with cost unit accounting, assigning cost to goods and services offered in the market. The remaining parts of the book deal with decision making and how management and cost accounting data can support managers in this task. A comparison of absorption costing and variable costing introduces the reader to management decisions such as product portfolio and outsourcing decisions. Additionally, cost-volume-profit analysis (break-even-analysis) is covered. The book closes with a comprehensive treatment of cost planning and variance analysis.

The process of estimating the cost for the development and delivery of a product, service, or solution can range from simple to highly complex based upon multiple factors including: technology maturity, urgency, geographic location, quantity, quality, availability of resources, hardware and software, systems integration and more. This book provides a comprehensive discussion of cost estimating and contract pricing with extensive use of tools, techniques, and best practices from both the public and private sectors. Key topics of discussion include: Cost estimating methods Cost accounting standards Cost analysis Profit analysis Contract pricing arrangements Price analysis Total ownership cost Earned value management systems

These proceedings represent the work of researchers participating in the 6th International Conference on Management, Leadership and Governance (ICMLG 2018) which is being hosted this year by the Institute for Knowledge and Innovation Southeast Asia (IKI-SEA), a Centre of Excellence of at Bangkok University, Thailand on 24-25 May 2018.

This book is the English edition of the German third edition, which has proven to be a standard work on the subject of risk management. The English edition extends the scope of use to the English-language bachelor's and master's degree courses in economics and for potential use (especially as a reference work) in the professional practice of risk management. The subject of the book is company-wide risk management based on the Value at Risk concept. This includes quantitative and qualitative risk measurement, risk analysis based on the RoRaC and various management tools for risk control. Other topics covered are the peculiarities of the various risk types, e.g. risk management of the effects of climate change, the global financial crisis and risk reporting. The book is rounded off by a comprehensive case study, in which all aspects are summarized. The volume is thus an indispensable standard work for students and practitioners.

The journal Accounting History was published in eight volumes intermittently between 1976 and 1986. It had a relatively small circulation and this re-issue of its anthology provides the opportunity for many of the articles which appeared in the journal over the years to once again reach a wider audience. The volume begins with items of a general nature, covering the importance of preserving accounting records and accounting history in general. Subsequent categories deal with the methodology of historical accounting research, government accounting, taxation, bankruptcy, professional accountancy and accounting theory, as well as auditing and management accounting.

This book examines performance evaluation in the context of assessing the non-financial outcomes of human activities. The topic is particularly relevant when economic, environmental or social performance has to be evaluated, e.g. the efficiency of actions and the lifecycles of products. The authors combine multi-criteria decision-making and production theories to develop a theoretical and methodological foundation for performance evaluation. They also demonstrate the typical pitfalls that are hindering the implementation of contemporary methods in practice. Special emphasis is placed on efficiency measurement with data envelopment analysis (DEA), and on data aggregation in life cycle assessment (LCA).

Markus Hammer investigates a time-based and analytics-supported operations management approach. He explores five perspectives: 1) the needs of industry, in particular manufacturing in process industries, 2) the impact of digitization, with focus on Big Data and analytics, 3) the management of operations through time-based performance metrics, 4) how operations improvement methods and advanced process control help achieve resource-productive operations and 5) learning from practice based on two empirical case studies. The author conceives, explains, and tests an implementation methodology. The final case study proves that the developed implementation methodology works in practice.

Management Control is the process by which managers at all hierarchical levels ensure that their strategic intentions are realized. This requires a management control system that enables managers to map external developments to the internal planning and control processes and to improve the coordination between all actors. The book offers concrete guidance on how to build an integrated planning and control system. The requirements are derived from management models and from corporate management practice. The book presents the fundamentals and models, while also guiding readers through a comprehensive simulation model programmed in Excel. Using this model, readers can trace the dependencies, structures and calculation methods used in detail, and identify the effects on other areas. The goal is to provide a design template for the implementation of a decision-relevant management accounting system as well as for winning internal piloting indicators and early warning information that readers can use at their own organizations. Given its focus, the book will be a valuable asset for managers and specialists, service providers, project developers, producers and traders, public enterprises, NGOs, consultants and lecturers in the fields of management, controllership and information technology.

For any country's economy, mineral resources form an important part in generating revenue and increasing its GDP. Therefore, learning the economics behind mines and minerals becomes mandatory and logical. This book investigates and promotes understanding of economic and policy issues, programmes and strategies for exploration, mining, beneficiation and marketing activities. Divided into ten chapters, the book puts emphasis on elaborating the principles of mine and mineral economics. The introductory chapter discusses the scope of the subject and the issues addressed by it. Outline of reserve-resource dynamics and the recent approaches towards estimating ore-reserves are then elaborated, followed by a discussion on mineral availability. Focus is then shifted to more technical and quantitative aspects of mineral sampling. Issues relating to mineral property evaluation and project feasibility assessment are then taken up. Both quantitative and logical aspects of mine finance and accounting have been discussed. Nitty-gritties of mine taxation are further outlined and the reader is introduced to aspects relating to marketing and trading of minerals. Distinctive features of the mineral policies of a few countries are highlighted while discussing the characteristic features of a national

mineral policy. The last chapter of this book is on mineral industry and the environment.
