Document from the year 2013 in the subject Business economics - General, grade: A, Atlantic International University, course: Business Administration, language: English, abstract: To make production effectively, costs like labor, overhead and material costs all together must be incurred. In fact in the production process every cost plays it role to make the production effective. Take an example of labor cost no production can take place without labor cost, however much it's the use of machines but the devices too are controlled by labor or humans. Cost reveals financial evaluation or assessments of resources prolonged to accomplish the goal like producing conducive service. In other words cost is the driver of all the income and expenditure statements. Costs appear everywhere be it in financial accounting, management accounting and in cost accounting governed by its principles. Therefore it should be noted that

cost accounting enables the company and the managers to have information about the period financial reports. But this doesn't mean that the released reports are the generally accepted ones by the Generally Accepted Accounting Principles (GAAP).

This acclaimed, number one market-leading book embraces the basic theme of "different costs for different purposes." It reaches beyond cost accounting procedures to consider concepts, analyses, and management. Chapter topics cover: the accountant's role in the organization; an introduction to cost terms and purposes; cost-volume-profit analysis; job costing; activity-based costing and activity-based management; master budget and responsibility accounting; flexible budgets, variances, and management control; inventory costing and capacity analysis; determining how costs behave; decision making and relevant information; pricing decisions and cost management; strategy, balanced scorecard, and strategic profitability analysis; cost allocation, customer-profitability analysis, and sales-variance analysis; allocation of support department costs, common costs and revenues; cost allocation: joint products and byproducts; process costing; spoilage, rework, and scrap; quality, time, and the theory of constraints; inventory management, just-in-time, and backflush costing; capital budgeting and cost analysis; management control systems, transfer pricing, and multinational considerations; and performance measurement, compensation, and multinational considerations. For future accountant who want to enhance their understanding of—and ability to—solve cost accounting problems.

There is growing interest in the history of accounting amongst both accounting practitioners and accounting academics. This interest developed steadily from about 1970 and really took off in the 1990s. However, there is a lack of texts dealing with major aspects of accounting

history that can be used in classrooms, to inform new researchers, and to provide a source of reference for established researchers. The great deal of research into cost and management accounting in Britain published in academic journals over the last twenty years, including the authors' own contributions, makes *The History of Cost and Management Accounting* an essential contribution to the field.
