This collection explores what the social and philosophical aspects of veganism offer to critical theory. Bringing together leading and emerging scholars working in animal studies and critical animal studies, *Thinking Veganism in Literature and Culture* shows how the experience of being vegan, and the conditions of thought fostered by veganism, pose new questions for work across multiple disciplines. Offering accounts of veganism which move beyond contemporary conceptualizations of it as a faddish dietary preference or set of proscriptions, it explores the messiness and necessary contradictions involved in thinking about or practicing a vegan way of life. By thinking through as well as about veganism, the project establishes the value of a vegan mode of reading, writing, looking, and thinking.

Hospitals have long relied on the heroics of one brilliant nurse or doctor to save the day. Such heroics often result in temporary workarounds and quick fixes that leave not only patients and quality care at risk, but also increase costs. This is the story of an organization breaking that habit. Like a growing number of healthcare organizations around the world, ThedaCare, Inc. has been using lean thinking and the principles of the Toyota Production System to improve quality of care, reduce waste, and become more reliable. But lean thinking was incompatible with ThedaCare's old top-down, hero-based system of management. Kim Barnas, former SVP of ThedaCare, shows us how she and her team created a management system that is stable and lean, to spur continuous improvement. *Beyond Heroes* shows the reader, step by step, how ThedaCare teams developed the system, using the stories of its doctors, nurses and administrators to illustrate. The book explores each of the eight essential components of the lean system, from front-line problem solving with the scientific method to daily team huddles and creating standard work for leaders all the way to the top of an organization. Finally, the author introduces four executives from healthcare systems across North America who have implemented ThedaCare's system and share the lessons they learned along the way. *Beyond Heroes* is not just a call to action or an argument for a better healthcare system. It is a necessary roadmap through the rocky terrain ahead, one that healthcare leaders can customize to their special needs.

Lean culture should be developed so that the goal to improve a process or business condition on a continuous basis can be achieved. Organizations with a lean culture have reaped many successful experiences in implementing lean, so it is seen as a legitimate methodology for organizations. New employees coming into an organization that has a lean culture will be taught to see, think, and feel from a lean perspective in dealing with problems in their job. Lean needs to be a cultural mindset for all for an organization to remain successful. The effort to build a lean culture relies on the support and active participation of leaders as the agents of change. Research shows that the success of a lean implementation is around 50% depending on leadership, while the remaining 30% is on finance, 10% on organization and culture, and 10% on skills and expert human resources. In general, leaders play a role in developing subordinates, problem-solving skills, and producing various continuous improvement efforts. In addition, leaders are responsible for encouraging subordinates to continuously use problem-solving tools as part of their efforts to improve their skills and deal with bigger problems. This book focuses on leadership and the tools required to support a lean initiative. Understanding the basic and valuable tools of lean provides the foundation for leaders in support of their organization initiative. Topics in the book include a description of the eight wastes, organizational level process mapping, lean metrics, and developing a future position. The author includes a discussion and samples of basic lean tools such as Kanban, standard work, and visual management. The author also describes the tools each leader needs to be successful with in creating a culture of lean thinking, including the leader task board, the process performance board, and process walk.

The design process has always been central to construction, but recent years have seen its significance increase, and the ways of approaching it multiply. To an increasing degree, other stakeholders such as contractors have input at the design stage, and the designer's role includes tasks that were traditionally the realm of other professions. This presents challenges as well as opportunities, and both are introduced, discussed, and analysed in Collaborative Design Management. Case studies from the likes of ARUP, Buro Happold, VINCI Construction UK Ltd, and CIOB show how technologies (BIM, podcasting), innovative working (information management, collaboration), and the evolution of roles (the designer-contractor interface, environmental compliance) have changed design management as a process. Starting from a basic level, the reader is introduced to the key themes and background to the design management role, including definitions of the responsibilities now commonly involved, and the strategic importance of design.

Influential technologies currently in use are evaluated, and the importance they are likely to have in future is explored. This combination of case studies from leading practitioners, clear explanations of design management roles and activities, and an exploration of how to successfully achieve collaborative design management makes this a highly topical and uniquely valuable book. This is essential reading for professionals and students of all levels interested in construction design management, from all AEC backgrounds.
