

bring to bear accumulated wisdom from researchers who have developed well-established and accepted theoretical perspectives on adult development processes in general, then wove in the ideas that have emerged in more targeted research on adult education, development of cognitive skills, identity development, self-regulation, moral and ethical development, and related topics. The authors present an integrative theory that provides a coherent framework for describing an understanding how leader development takes place.

We are constantly bombarded with breaking scientific news in the media, but we are almost never provided with enough information to assess the truth of these claims. This book teaches readers how to think like a scientist to question claims like these more critically.

Educational initiatives attempt to introduce or promote a culture of quality within education by raising concerns related to student learning, providing services related to assessment, professional development of teachers, curriculum and pedagogy, and influencing educational policy, in the realm of technology. *Adapting Information and Communication Technologies for Effective Education* addresses ICT assessment in universities, student satisfaction in management information system programs, factors that impact the successful implementation of a laptop program, student learning and electronic portfolios, and strategic planning for e-learning. Providing innovative research on several fundamental technology-based initiatives, this book will make a valuable addition to every reference library.

This volume reflects the development and theoretical foundation of a new paradigm for critical thinking based on inquiry. The field of critical thinking, as manifested in the Informal Logic movement, developed primarily as a response to the inadequacies of formalism to represent actual argumentative practice and to provide useful argumentative skills to students. Because of this, the primary focus of the field has been on informal arguments rather than formal reasoning. Yet the formalist history of the field is still evident in its emphasis, with respect to both theory and pedagogy, on the structure and evaluation of individual, de-contextualized arguments. It is our view that such a view of critical thinking is excessively narrow and limited, failing to provide an understanding of argumentation as largely a matter of comparative evaluation of a variety of contending positions and arguments with the goal of reaching a reasoned judgment on an issue. As a consequence, traditional critical thinking instruction is problematic in failing to provide the reasoning skills that students need in order to accomplish this goal. Instead, the goal of critical thinking instruction has been seen largely as a defensive one: of learning to not fall prey to invalid, inadequate, or fallacious arguments.

Argumentation: Critical Thinking in Action, 2nd ed., explores a wide variety of issues and concepts connected to making arguments, responding to the arguments of others, and using good critical thinking skills to analyze persuasive communication. Key topics include the nature of claims, evidence, and reasoning; common fallacies in reasoning; traits associated with good critical thinking; how language is used strategically in argument; ways to organize an argumentative case; how to refute an opposing argument or case; cultural dimensions of argument; and ways to make a better impression either orally or in writing.

"A really useful textbook to help undergraduate students construct arguments in their writing, and raise their writing abilities to a higher level.

The book also provides useful examples that relates to sports students." - Hassan Khalil, Hertfordshire University "A fantastic text and one we use regularly with undergraduate and postgraduates." - Abbe Brady, Gloucestershire University The capacity to think critically is essential for success in sport courses in higher education. This book provides all those involved in the study of sport with the tools to assess, construct and present arguments and to analyse and evaluate material. The emphasis is on the application of critical thinking – in the form of written arguments, discussion and negotiation. Throughout, the text and examples are presented within the context of sport, helping students to more easily apply their learning to their subject area.

This distinctive collection of original articles features contributions from many of the leading scholars of ancient Greek philosophy. They explore the concept of reason and the method of analysis and the central role they play in the philosophies of Socrates, Plato, and Aristotle. They engage with salient themes in metaphysics, epistemology, ethics, and political theory, as well as tracing links between each thinker's ideas on selected topics. The volume contains analyses of Plato's Socrates, focusing on his views of moral psychology, the obligation to obey the law, the foundations of politics, justice and retribution, and Socratic virtue. On Plato's Republic, the discussions cover the relationship between politics and philosophy, the primacy of reason over the soul's non-rational capacities, the analogy of the city and the soul, and our responsibility for choosing how we live our own lives. The anthology also probes Plato's analysis of logos (reason or language) which underlies his philosophy including the theory of forms. A quartet of reflections explores Aristotelian themes including the connections between knowledge and belief, the nature of essence and function, and his theories of virtue and grace. The volume concludes with an insightful intellectual memoir by David Keyt which charts the rise of analytic classical scholarship in the past century and along the way provides entertaining anecdotes involving major figures in modern academic philosophy. Blending academic authority with creative flair and demonstrating the continuing interest of ancient Greek philosophy, this book will be a valuable addition to the libraries of all those studying and researching the origins of Western philosophy.
