The COVID-19 pandemic has taken precious lives and devastated the global economy. It has also revealed chinks in our supply chains. Not only have manufacturers found themselves scrambling unsuccessfully to find new suppliers when their Asian sources shut down, but the Western world has experienced across-the-board shortages of essential consumer packaged goods for the first time in decades. Blockchain technology has the potential to minimize these kinds of pandemic disruptions. In this book, some of the world's top experts show how blockchain--in combination with other innovations such as additive manufacturing, artificial intelligence, and the Internet of Things--can address longstanding problems that make the business of getting goods to customers so slow and expensive, especially in crises. Today's supply chains are complex, as they move resources through trucks, planes, boats, and trains. Too many parties rely on a hodgepodge of documents and intermediaries to do business, which make the whereabouts and custody of goods unclear. That's why, in a pandemic, uninformed consumers might reasonably believe that toilet paper won't be available for many months. Enter blockchain--the Internet of Value. For the first time in human history, individuals and organizations can manage and trade their assets digitally peer to peer. In doing so, they will reinvent global commerce and how we exchange value. This will transform the best practices of operations, logistics, procurement and purchasing, transportation, customs and border control, trade finance and insurance, manufacturing, and inventory management. Global supply chains are ripe for disruption at every level and in every role. Supply Chain Revolution identifies what leaders should be doing now to prepare their organizations for the inevitable decentralized future. Enterprise executives and entrepreneurs alike will find ideas and opportunities to discuss with their stakeholders and decide how best to participate in the blockchain revolution.

The classic book that introduced the investment industry to the concept of trading psychology. With rare insight based on his firsthand commodity trading experience, author Mark Douglas demonstrates how the mental matters that allow us function effectively in society are often psychological barriers in trading. After examining how we develop losing attitudes, this book prepares you for a thorough "mental housecleaning" of deeply rooted thought processes. And then it shows the reader how to develop and apply attitudes and behaviors that transcend psychological obstacles and lead to success. The Disciplined Trader helps you join the elite few who have learned how to control their trading behavior (the few traders who consistently take the greatest percentage of profits out of the market) by developing a systematic, step-by-step approach to winning week after week, month after month. The book is divided into three parts: * An overview of the psychological requirements of the trading environment * A definition of the problems and challenges of becoming a successful trader * Basic insights into what behavior may need to be changed, and how to build a framework for accomplishing this goal * How to develop specific trading skills based on a clear, objective perspective on market action "A groundbreaking work published in 1990 examining as to why most traders cannot raise their equity on a consistent basis, bringing the reader to practical conclusions to go about changing any limiting mindset."--Larry Pesavento, TradingTutor.com

Smart. Funny. Fearless."It's pretty safe to say that Spy was the most influential magazine of the 1980s. It might have remade New York's cultural landscape; it definitely changed the whole tone of magazine journalism. It was cruel, brilliant, beautifully written and perfectly designed, and feared by all. There's no magazine I know of that's so continually referenced, held up as a benchmark, and whose demise is so lamented" --Dave Eggers. "It's a piece of garbage" --Donald Trump

We've had 5 cycles over the past 200 years with the last wave, the Age of Information & Telecommunications. We've seen evidence that a new cycle has begun. Technological revolutions come by way of a cluster of new innovations. About a decade ago, you started to see AI, robotics and IoT (sensors) delivering on automation. Soon, there will be a global race to build autonomous operations. Businesses and organizations without autonomous operations simply will not be able to compete with those that do because ... autonomy is the ultimate competitive advantage.
