suggestions, and chapter summaries, this book is a valuable, self-contained tool for professionals and an ideal introductory text for courses in software testing, quality assurance, and software engineering.

Quick Reference General Knowledge is a thoroughly researched, exam oriented text, which will help students to master general knowledge from a variety of fields. This book will prepare students for numerous competitive examinations. The book covers various topics such as history, geography, Indian polity, Indian economy, general science and general knowledge, presenting concise and clear explanations for the students. This book will be useful for SSC, Banking, UPSC, NDA, CDS and other examinations.

This book presents a picture of Pakistani society in its earliest years through Aziz Khan, a representative of ancient and traditional values, and the Shah brothers, who exploit the resources and people of the new country for their personal gain. The intricate story gradually unfolds to reveal the emotions of its characters and describes the suffering of Aziz Khan with poignancy.

First performed by the Traverse Theater Club in Edinburgh, this play is imaginative, alive with its character's humour and optimism. It is also sad and haunting. Ideal for Standard Grade English, it will also appeal to all those who like Glaswegian dialogue.

Crafted with rare wit and humour, the poems in this book deal with a diverse range of themes such as political opportunism and sycophancy, war, the baffling paradox of god, the enchanting richness and beauty of nature, and the fascinating

When a letter is found in a secret drawer discussing a wonderful event that happened on Christmas during wartime in 1914, the finder of the letter returns it to the addressee who is living in a nursing home.

A Passage to India (1924) is a novel by English author E. M. Forster set against the backdrop of the British Raj and the Indian independence movement in the 1920s. It was selected as one of the 100 great works of 20th century English literature by the Modern Library and won the 1924 James Tait Black Memorial Prize for fiction. Time magazine included the novel in its "All Time 100 Novels" list. The novel is based on Forster's experiences in India, deriving the title from Walt Whitman's 1870 poem "Passage to India" in *Leaves of Grass*. The story revolves around four characters: Dr. Aziz, his British friend Mr. Cyril Fielding, Mrs. Moore, and Miss Adela Quested. During a trip to the fictitious Marabar Caves (modeled on the Barabar Caves of Bihar), Adela thinks she finds herself alone with Dr. Aziz in one of the caves (when in fact he is in an entirely different cave), and subsequently panics and flees; it is assumed that Dr. Aziz has attempted to assault her. Aziz's trial, and its run-up and aftermath, bring to

a boil the common racial tensions and prejudices between Indians and the British who rule India. Edward Morgan Forster OM CH (1 January 1879 – 7 June 1970) was an English novelist, short story writer, essayist and librettist. Many of his novels examine class difference and hypocrisy, including *A Room with a View* (1908), *Howards End* (1910) and *A Passage to India* (1924). The last brought him his greatest success. He was nominated for the Nobel Prize in Literature in 16 different years.

In this beautiful collection of poems, remarkable for their plainspoken radiance, the bestselling author of *The House on Mango Street* and winner of the 2019 PEN/Nabokov Award for Achievement in International Literature embraces her first passion-verse. With lines both comic and sad, Sandra Cisneros deftly-and dazzlingly-explores the human experience. For those familiar with Cisneros only from her acclaimed fiction, *My Wicked Wicked Ways* presents her in an entirely new light. And for readers everywhere, here is a showcase of one of our most powerful writers at her lyrical best.

The dialectic between national literary production and the rise of a group of writers with cosmopolitan sympathies is the aim of this book, concentrating on Rushdie's novels and journalism.

A novel by the author of "A New History of Torments", "The Fiction of Reality" and "Figures of Enchantment". It features the character Urim who wanders the world, and yet in finding the end of his journey, he sees the mirror image of its beginning.

The 30 Selected and the 20 New that comprise 50 POEMS have been chosen to present a concise and representative volume of Zulfikar Ghose' poetry for the general reader interested in Pakistan's premier English-language poet and for scholars specialising in contemporary English poetry and post-colonial literature. This book provides a systematic and comparative description of the vast number of research issues related to the quality of data and information. It does so by delivering a sound, integrated and comprehensive overview of the state of the art and future development of data and information quality in databases and information systems. To this end, it presents an extensive description of the techniques that constitute the core of data and information quality research, including record linkage (also called object identification), data integration, error localization and correction, and examines the related techniques in a comprehensive and original methodological framework. Quality dimension definitions and adopted models are also analyzed in detail, and differences between the proposed solutions are highlighted and discussed. Furthermore, while systematically describing data and information quality as an autonomous research area, paradigms and influences deriving from other areas, such as probability theory,

statistical data analysis, data mining, knowledge representation, and machine learning are also included. Last not least, the book also highlights very practical solutions, such as methodologies, benchmarks for the most effective techniques, case studies, and examples. The book has been written primarily for researchers in the fields of databases and information management or in natural sciences who are interested in investigating properties of data and information that have an impact on the quality of experiments, processes and on real life. The material presented is also sufficiently self-contained for masters or PhD-level courses, and it covers all the fundamentals and topics without the need for other textbooks. Data and information system administrators and practitioners, who deal with systems exposed to data-quality issues and as a result need a systematization of the field and practical methods in the area, will also benefit from the combination of concrete practical approaches with sound theoretical formalisms. The articles investigate representations in literature, both by the colonizers and colonized. Many deal with the effect the dominant culture had on the self image of native inhabitants. They cover areas on all continents that were colonized by European countries.

From 1959 to 1973, the writers B. S. Johnson and Zulfikar Ghose regularly wrote letters to each other in which they discussed their own work and literary preoccupations. They exchanged early drafts of poems, short stories, plays and novels, and their correspondence contains detailed comments and extended analyses of these texts, as well as illuminating reflections on literature, criticism, poetics and

aesthetics. Though much of the correspondence is an extended literary discussion, it also contains moments of personal revelation, jokes and anecdotes so that the letters, with their surprising asides, are enjoyable to read, even as they inform with their biographical and intellectual content. The two authors also frequently refer to the university poetry journals and literary magazines they contributed to or edited, and they write about the poetry meetings they attended and the writers they met or read. Their involvement in literary groups and their dealings with publishers, editors and agents are indicative of the publishing mechanisms of the time. This correspondence thus not only provides insight into the work of both B. S. Johnson and Zulfikar Ghose, but also conjures up a comprehensive picture of the London literary world of the 1960s.

Reviews of the first edition: '...a work of high seriousness...manna from rhetorical heaven for students and researchers with a lot of hard graft ahead of them...' (English Today) '...an impressive single-author reference work...' (English) '...Not only is this volume indispensable for anyone, students or academics, working in any field related to stylistics, it is, like all the best dictionaries, a very good read...' (Le Lingue del Mondo) Over the past ten years there have been striking advances in stylistics. These have given rise to new terms and to revised thinking of concepts and re-definitions of terms. A Dictionary of Stylistics, 2nd Edition contains over 600 alphabetically listed entries: fully revised since the first and second editions, it contains many new entries. Drawing material from stylistics and a range of related disciplines such as sociolinguistics, cognitive linguistics and traditional rhetoric, the revised Third Edition provides a valuable reference work for students and teachers of stylistics, as well as critical discourse analysis and literary criticism. At the same time it provides a general picture of the

nature, insights and methodologies of stylistics. As well as explaining terminology clearly and concisely, this edition contains a subject index for further ease of use. With numerous quotations; explanations for many basic terms from grammar and rhetoric; and a comprehensive bibliography, this is a unique reference work and handbook for stylistic and textual analysis. Students and teachers at secondary and tertiary levels of English language and literature or English as a foreign or second language, and of linguistics, will find it an invaluable source of information. Shape analyses focusing on inferring highly complex properties of heap-manipulating programs are techniques used in the automatic verification of infinite-state programs. This survey provides a comprehensive introduction to the field of shape analysis, and presents the foundation of the topic in an accessible manner to readers who are not familiar with it. To do so, the authors characterize the essence of shape analysis compared to more classical pointer analyses as well as giving the intuition underlying the abstractions commonly used in shape analysis and the algorithms that allow to statically compute intricate semantic properties. The authors cover the main families of shape analysis abstraction and algorithms, highlight the similarities between them, and characterize the main differences between the most common approaches. Finally, the authors demonstrate the impact of the field by describing a few other static analysis works - array abstractions, dictionary abstractions and interprocedural analyses - that were influenced by the ideas of shape analysis. Researchers and students new to the concept of shape analysis will find this monograph a one-stop shop of information that will quickly get them up to speed on all aspects of the topic. With a comprehensive set of references,

this accessible survey will enable the reader to adopt the techniques quickly in their own further research.

This is a comprehensive introduction to literary stylistics offering an accessible overview of stylistic, with activities, study questions, sample analyses, commentaries and key readings - all in the same volume.

As networks of video cameras are installed in many applications like security and surveillance, environmental monitoring, disaster response, and assisted living facilities, among others, image understanding in camera networks is becoming an important area of research and technology development. There are many challenges that need to be addressed in the process. Some of them are listed below: - Traditional computer vision challenges in tracking and recognition, robustness to pose, illumination, occlusion, clutter, recognition of objects, and activities; - Aggregating local information for wide area scene understanding, like obtaining stable, long-term tracks of objects; - Positioning of the cameras and dynamic control of pan-tilt-zoom (PTZ) cameras for optimal sensing; - Distributed processing and scene analysis algorithms; - Resource constraints imposed by different applications like security and surveillance, environmental monitoring, disaster response, assisted living facilities, etc. In this book, we focus on the basic research problems in camera networks, review the current state-of-the-art and present a detailed description of some of the recently developed methodologies. The major underlying theme in all the work presented is to take a network-centric view whereby the overall decisions are made at the network level. This is sometimes achieved by accumulating all the data at a central server, while at other times by exchanging decisions made by individual cameras based on their locally sensed data. Chapter One starts with an overview of the problems in camera networks and the major research directions. Some of

the currently available experimental testbeds are also discussed here. One of the fundamental tasks in the analysis of dynamic scenes is to track objects. Since camera networks cover a large area, the systems need to be able to track over such wide areas where there could be both overlapping and non-overlapping fields of view of the cameras, as addressed in Chapter Two: Distributed processing is another challenge in camera networks and recent methods have shown how to do tracking, pose estimation and calibration in a distributed environment. Consensus algorithms that enable these tasks are described in Chapter Three. Chapter Four summarizes a few approaches on object and activity recognition in both distributed and centralized camera network environments. All these methods have focused primarily on the analysis side given that images are being obtained by the cameras. Efficient utilization of such networks often calls for active sensing, whereby the acquisition and analysis phases are closely linked. We discuss this issue in detail in Chapter Five and show how collaborative and opportunistic sensing in a camera network can be achieved. Finally, Chapter Six concludes the book by highlighting the major directions for future research.

'I didn't want you to come here.' So says the note that the boy Edmund Hooper passes to Charles Kingshaw upon his arrival at Warings. But young Kingshaw and his mother have come to live with Hooper and his father in the ugly, isolated Victorian house for good. To Hooper, Kingshaw is an intruder, a boy to be subtly persecuted, and Kingshaw finds that even the most ordinary object can be turned by Hooper into a source of terror. In Hang Wood their roles are briefly reversed, but Kingshaw knows Hooper will never let him be.

Style refers to ways of speaking - how speakers use the resource of language variation to make meaning in social encounters. This 2007 book develops a coherent theoretical approach to style in sociolinguistics, illustrated with copious examples. It explains how speakers project different social identities and create different social relationships through their style choices, and how speech-style and social context inter-relate. Style therefore refers to the wide range of strategic actions and performances that speakers engage in, to construct themselves and their social lives. Coupland draws on and integrates a wide variety of contemporary sociolinguistic research as well as his own extensive research in this field. The emphasis is on how social meanings are made locally, in specific relationships, genres, groups and cultures, and on studying language variation as part of the analysis of spoken discourse.
