

# Designing Sustainable Packaging Scott Boylston

Traditional Chinese edition of Human by Design: From Evolution by Chance to Transformation by Choice

18, 18

This book is an action-oriented, accessible guide to design thinking that addresses both the how and why of product design. It encourages designers to look beyond the abstraction of pure forms or the whimsy of virtual objects, and instead to make and test real objects in a studio environment.--[book cover]

19, 19

Examines the user experience in the economic, sociological, and environmental movement to create sustainable products, and provides a framework for designing sustainable hardware, software, and packaging.

19, 19

An unexpected rain shower causes quarreling among the members of a small community.

This Brief defines reliable correlations between the food packaging design and its chemical features in terms of an 'integrated food product' (the synergistic union composed of the edible content and its container). A good design, as described in this Brief, implies the best choices from a series of possibilities, taking into account economical and commercial influences or limitations in the production and processing chain and the chemical interactions that can arise between the food containers and the contained edible material. This Brief highlights how the different requirements can be combined, while avoiding dangerous food risks originating from the chemical interaction between the container and the product. Different designs are critically analysed with relation to the effect on contained foods. The influences and resulting consequences of different possible food packaging designs are highlighted and discussed in selected case studies for some every-day products (like potato chips).

Presenting diverse case studies of contemporary sustainable urban practice from Europe, Africa, India, South America, the USA and Australia, this book offers the reader a fantastic wealth of practical material from a range of internationally renowned authors. Each practical case study has addressed issues and then offered solutions to implement sustainable cities across a range of urban scales and cultures. Urgent design challenges explored include population density, recreating infrastructure that supports carbon neutral or low carbon (emission) intensive urban activities, and retrofitting for sustainability. Highly illustrated, thematically focused and with superb global coverage, this book presents a multi-voiced and yet highly cohesive reference for anyone interested in green issues in urban design and architecture.
