Government data and resources are uniquely useful to researchers and other library users. But without a roadmap, sifting through the sheer quantity of information to find the right answers is foolhardy. The first edition of this text is well established as an essential navigational tool for both LIS students and professionals; now this newly revised, peer-reviewed update is even more attuned to new sources and types of government information and how best to locate them. Unmatched in its scope, this book covers such key topics as the history of government information, from its colorful beginnings to the era of Wikileaks, Edward Snowden, and data breaches; how to think like a government documents librarian in order to find information efficiently, plus other research tips; all types of law resources and information, including public laws and the U.S. Code, Case Law and the judicial branch, and regulations; Congressional literature, from bills and committee hearings to the U.S. Congressional Serial Set; patents, trademarks, and intellectual property; census data, educational information, and other statistical resources; health information, with an in-depth look at the Patient Protection and Affordable Care Act and the trend toward and impact of online medical records; and science, environmental, and energy resources from agencies like the Environmental Protection Agency and the Department of Energy. This book is an introduction to embedded systems design, using the ARM mbed and C programming language as development tools. The mbed provides a compact, self-contained and low-cost hardware core, and the on-line compiler requires no download or installation, being accessible wherever an internet link exists. The book further combines these with a simple "breadboard" approach, whereby simple circuits are built up around the mbed, with no soldering or pcb assembly

required. The book adopts a "learning through doing" approach. Each chapter is based around a major topic in embedded systems. The chapter proceeds as a series of practical experiments; the reader sets up a simple hardware system, develops and downloads a simple program, and immediately observes and tests the outcomes. The book then reflects on the experimental results, evaluating the strengths and weaknesses of the technology or technique introduced, explores how precise the link is between theory and practice, and considers applications and the wider context. The only book that explains how to use ARM's mbed development toolkit to help the speedy and easy development of embedded systems. Teaches embedded systems core principles in the context of developing quick applications, making embedded systems development an easy task for the non specialist who does not have a deep knowledge of electronics or software All key concepts are covered through simple and effective experimentation

Mobile communication has been a critical part of everyday life for the last 30 years. As the demand for wireless communications and higher data rates on these links continues its rapid growth, engineers, scientists, and researchers are required to advance the hardware and software needed to deliver systems for 5G, Massive multiple-input, multiple-output (MIMO), and optical backhaul networks. Now, more than ever before, the fundamental concept of multiplexing is at play. This book is a unique reference for understanding the concept of multiplexing. It provides comprehensive coverage of the practical applications of multiplexing to help the reader better understand its use in these systems. It is a great resource, especially for engineers working on digital signal processing, radio frequency (RF), antenna design, beamforming, and network designs. The book contains chapters on the following topics:

- History of multiplexing and how it applies to current technologies;
- Different types and applications of multiplexing;
- Multiplexing techniques in wireless networks;
- Multiple-Input, Multiple-Output Orthogonal Frequency-Division Multiplexing (MIMO-OFD);
- Direct-Sequence Optical-Code Division Multiple-Access (DS-OCDMA);
- Optically multiplexed systems
