Yucca Mountain, Nevada is designated as the proposed geological repository for disposal of spent nuclear fuel (SNF) and high-level radioactive waste (HLW). The U.S. Department of Energy (DOE) is preparing a license application to be submitted to the U.S. Regulatory Committee (USNRC). The Waste Package Closure System (WPCS) project, as summarized in this report, addresses control-related subsystems needed to perform waste package closure-related operations. It includes technical requirements for the WPCS, including component design descriptions for the Welding and Inspection System, and Control and Data Management System. It also includes control functions and associated performance requirements for the Welding Process.

Based on the authors' combined experience of seventy years working on projects around the globe, Construction Equipment Management for Engineers, Estimators, and Owners contains hands-on, how-to information that you can put to immediate use. Taking an approach that combines analytical and practical results, this is a valuable reference for a wide range of individuals and organizations within the architecture, engineering, and construction industry. The authors delineate the evolution of construction equipment, setting the stage for specific, up-to-date information on the state-of-the-art in the field. They cover estimating equipment ownership, operating cost, and how to determine economic life and replacement policy as well as how to schedule a production-driven, equipment-intensive project that achieves target production rates and meets target equipment-related unit costs and profits. The book includes a matrix for the selection of equipment and identifies common pitfalls of project equipment selection and how to avoid them. It describes how to develop an OSHA job safety analysis for an equipment-intensive project, making this sometimes onerous but always essential task easier. The authors' diverse and broad experience makes this a book that ranges from the rigorous mathematical analysis of equipment operations to the pragmatic discussion of the equipment maintenance programs needed to guarantee that the production predicted in a cost estimate occurs.

Within

this changing cultural landscape the legal concepts of privacy, data protection, intellectual property and criminality have necessarily had to develop and adapt. In this volume a number of international scholars consider this process and whether it has merely been a question of the law adapting to technology or whether technology has been forced to adapt to law. Technologies have wrought a culture shift it is therefore apposite to ask whether legal concepts, as reflections of culture, should also change. It is in this volume where papers on privacy data protection, intellectual protection and cyber crime begin address this question. This book was published as a special issue of International review of Law Computers and Technology.
