Surgery Review is a comprehensive review presented in a unique format. Topics are introduced with case presentations and relevant diagnostic and management information is then summarized in easy-to-remember capsules with exam pearls interjected throughout. All areas of general surgery are covered, including the subspecialty areas. There is also a section on basic science found on the in-training exam and written boards, and a section of anesthesia, trauma, and critical care. Unlike many other books, General Surgery Review excludes controversial management in order to present an easy-to-remember foundation of knowledge. Thus, the book focuses on "the basics" to provide the reader with a broad command of the field. This title is indispensable to residents studying for in-training exam or boards, and is also popular with practitioners preparing for their recertification exam in general surgery.

From the earliest stages of our medical training, we experience unforgettable moments with our patients - inspiring, traumatic, joyful, and sometimes even humorous events. Too often, as doctors-in-training we talk about the suffering or recovery of our patients, ignoring our own emotions after these events, letting them passively shape us until we dig ourselves into an abyss of burn out and resentment. *Diary of a Med Student* is a book created by medical students, for medical students, doctors, pre-med

students, and their loved ones to look backward, forward, and laterally on the wonderful world of medical school. This book offers a space to reflect on our emotions, process their meaning, and share them as tales of sorrow, humor, joy, or inspiration, told from the perspective of medical students writing in a diary. While the act of sharing emotion is itself therapeutic, reading these emotional challenges that we can all relate to is unifying and comforting, providing us with insight through the lessons conveyed in the light of a variety of feelings. Let this book spark a powerful domino effect of change in medical education: in the way we teach physicians to create a safe space for inner reflection and expression of emotion to ultimately enhance physician wellness.

Most questions end in "what are the appropriate next steps in managing this patient?" Imagine yourself as the clinician taking care of these patients: What test(s), if any, would you order next?"--Provided by publisher.

Each chapter is a case that opens with a unique clinical presentation, followed by a description of the diagnosis, assessment and management techniques used to treat it, as well as questions and answers (between 8 and 10) about relevant aspects related to the diagnosis and treatment of the addressed disease. The Q&A section will broaden discussion and increase the title's pedagogical value. The casebook features 40 surgical cases in the following

thematic areas: Aortic Disease, Arrhythmias, Cardiac Tumors, Coronary Insufficiency, Congenital Heart Disease, Endovascular Therapies, Heart Failure, Heart Transplantation, Mechanical Circulatory Support, Pericardial Disease, Pulmonary Embolism and Valvular Heart Disease. This book will be prepared by the Brazilian Department for Academic Leagues of Cardiovascular Surgery, within the Brazilian Society of Cardiovascular Surgery (BSCVS). This department is the section within BSCVS that consists of the academic leagues of cardiovascular surgery from each university throughout the country. In Brazil, medical academic leagues are organizations that gathers students, interns and residents to discuss a certain topic and promote research and teaching-oriented extra-class activities, supervised by a group of professors. Thus trainees will have involvement in writing the chapters and the senior professor supervisors will edit and finalize the work. Basically, each chapter is written by an intern or resident and, ultimately, his/her supervisor. As the books volume editors, doctors Almeida and Jatene will have final responsibility for the cases and overall manuscript. Surgery: A Case Based Clinical Review provides the reader with a comprehensive understanding of surgical diseases in one easy to use reference that combines multiple teaching formats. The book begins using a case based approach. The cases presented cover the diseases most commonly encountered on a surgical rotation. The cases are designed to provide the reader with the classic findings on history and physical examination. The case presentation is followed by a

series of short questions and answers, designed to provide further understanding of the important aspects of the history, physical examination, differential diagnosis, diagnostic work-up and management, as well as questions that may arise on surgical rounds. Key figures and tables visually reinforce the important elements of the disease process. A brief algorithmic flow chart is provided so the reader can quickly understand the optimal management approach. Two additional special sections further strengthen the student's comprehension. The first section covers areas of controversy in the diagnosis or management of each disease, and another section discusses pitfalls to avoid, where the inexperienced clinician might get in trouble. The text concludes with a series of multiple choice questions in a surgery shelf/USMLE format with robust explanations. Surgery: A Case Based Clinical Review is based on 20 years of Socratic medical student teaching by a nine-time Golden Apple teaching awardee from the UCLA School of Medicine and will be of great utility for medical students when they rotate on surgery, interns, physician assistant students, nursing students and nurse practitioner students.
