Cosmetics for skin, hair, and nails play a vital part in the management and treatment of many dermatological conditions; unfortunately, they may also at times be the cause of some dermatological problems. They are therefore subjects where dermatologists need to be aware of the major commercial developments taking place, in addition to the many common Over The Counter products already available, in order to be vigilant in checking the possible benefits or disadvantages for patients. This text takes a serious look at the integration of skin care products, cosmetics, hair adornments, and nail cosmetics in the daily practice of dermatology, expanding the realm of disease treatment beyond diagnosis and treatment into the maintenance phase of healthy skin, hair, and nails.

About 2.5 million individuals have congestive heart failure in the United States with over 400,000 new cases expected annually. Congestive heart failure also is one of the commonest causes for hospital admissions accounting for over 5 million hospital days per year. Despite the early recognition of this condition and active medical research into both mechanisms and therapy, prognosis continues to remain dismal with less than a 50% expected five year survival. In the last decade we have seen many new medical and therapeutic options for patients with congestive heart failure

which extend beyond the use of bed rest, sodium restriction, digitalis and diuretics. These include vasodilators of a variety of types including the angiotensin conventional enzyme (ACE) inhibitors. Also, many new inotropes are under active investigation both in oral and intravenous forms. In March of 1984 a survey of over 5000 physicians was performed under the auspices of the American Heart Association (reported in: JAOC 8:966, 1986). That survey showed that there was no universally accepted definition for congestive heart failure and that a wide spectrum of diagnostic criteria for this common condition existed even among academic cardiologists. There was no clear standard as to even the most basic treatment of congestive heart failure. For example, exercise restriction was recommended by 19% of physicians, 31% recommended no change in activity, and 50% either light exercise or an exercise conditioning program.

Multidrug-resistant tuberculosis (TB) is caused by bacteria resistant to isoniazid and rifampicin, the two most effective first-line anti-TB drugs, originally developed and introduced in the 1950 and 1960s. Since 2008, the Forum on Drug Discovery, Development, and Translation of the Institute of Medicine has hosted or co-hosted six domestic and international workshops addressing the global crisis of drug-resistant TB, with special attention to the BRICS countries - Brazil, Russia, India, China, and South Africa. The Global Crisis of Drug-Resistant Tuberculosis and Leadership of China and the BRICS is the summary of a workshop convened to address the current status of drug-resistant TB globally and in China. This report considers lessons learned from high burden countries; highlights global challenges to controlling the spread of drug-resistant strains; and discusses innovative strategies to advance and harmonize local and international efforts to prevent and treat drug-resistant TB. Additionally, the report examines the problem of MDR TB and emergent TB strains that are potentially untreatable with drugs available and considers the critical leadership role of the BRICS countries in addressing the threats and opportunities in drug-resistant TB.

Praise for the Second Edition: "This is a very well-written book...My students appreciated the down-to-earth style of writing...Many of my students are deathly afraid of topics that have anything to do with biology. [They] were assured by the lack of jargon and the fact that the chapters were written in a way that they could easily understand. I look forward to the third edition!" -Nathan Thomas, LCSW San Jose State University, School of Social Work "New findings emerge daily, and new medications hit the market every year...The nature of this topic lends itself to revision at least every 2-3 years to stay current and germane to current practice standards... The case studies are a nice way to transform and integrate clinical principles with social work practice. Students have enjoyed the book as a foundational text."

-Dr. Robert Mindrup, PsyD, University of Tennessee, Knoxville, College of Social Work This comprehensive text—noted for its facility in integrating principles into practice--prepares social work students to play a key role within an interdisciplinary health care team: that of counseling clients who are taking medications used to treat common mental health conditions. The third edition has been fully revised to include new medications and reflect changes resulting from the publication of the DSM 5. Sample treatment plans, case examples, and a full glossary of medications have been updated, and the
