

Dutta Pal Chowdhury Physics Book

This book includes a set of rigorously reviewed world-class manuscripts addressing and detailing state-of-the-art research projects in the areas of Computer Science, Computer Engineering and Information Sciences. The book presents selected papers from the conference proceedings of the International Conference on Systems, Computing Sciences and Software Engineering (SCSS 2006). All aspects of the conference were managed on-line.

The transverse field Ising and XY models (the simplest quantum spin models) provide the organising principle for the rich variety of interconnected subjects which are covered in this book. From a generic introduction to in-depth discussions of the subtleties of the transverse field Ising and related models, it includes the essentials of quantum dynamics and quantum information. A wide range of relevant topics has also been provided: quantum phase transitions, various measures of quantum information, the effects of disorder and frustration, quenching dynamics and the Kibble-Zurek scaling relation, the Kitaev model, topological phases of quantum systems, and bosonisation. In addition, it also discusses the experimental studies of transverse field models (including the first experimental realisation of quantum annealing) and the recent realisation of the transverse field Ising model using tunable Josephson junctions. Further, it points to the obstacles still remaining to develop a successful quantum computer.

Recent political changes in Eastern Europe made available much needed information for this edition, clearly the standard directory of the libraries of the world, with facts and contact information for some 40,000 libraries (2,100 new to this edition) in 166 countries. Included are national, general research, university and college, professional school, government, ecclesiastical, corporate and business, and public libraries with holdings over 30,000 volumes, and special libraries with more than 5,000 volumes. The arrangement is alphabetical by country, and within countries by library type, further by place name, and finally by name of the institution.
