The aim of this volume is to provide deep insights and the latest scientific developments and trends in experimental economics. Derived from the 2015 Computational Methods in Experimental Economics (CMEE) conference, this book features papers containing research and analysis of economic experiments concerning research in such areas as management science, decision theory, game theory, marketing and political science. The goal is to present possibilities for using various computer methods in the scope of experimental economics to further provide researchers with a wide variety of tools. The field of experimental economics is rapidly evolving. Modern use of experimental economics requires the integration of knowledge in the domains of economic sciences, computer science, psychology, and neuroscience. Recent research includes experiments conducted both in the laboratory and in the field, and the results are used for testing and a better understanding of economic theories. Researchers working in this field use mainly a set of well-established methods and computer tools that support the experiments. Methods such as artificial intelligence, computer simulation and computer graphics, however, are not represented enough in experimental economics studies and most experimenters do not consider their usage. The goal of the conference and the enclosed papers is to allow for an exchange of experiences and to promote joint initiatives to insight change in this trend.

This book provides a new paradigm of economics that is called Qualitative Economics. The authors take an approach to economics that is entirely different from the established neo-classical economics paradigm. Arguing that the basis of neo-classical economic theory with its focus on perfect information in a balanced equilibrium system of supply and demand is fundamentally flawed, the authors propose an inclusive philosophical and scientific perspective to explain economic structures and activities and how best to understand the dynamics of economics. Furthermore, the authors argue that a qualitative approach allows for greater understanding of not only the actors, actions and situations in economics, but also defines the context in which the more traditional quantitative and statistical methods are applied. The book includes case studies to further illustrate the applications of qualitative economics. Challenging orthodox paradigms and schools of economic thought, the book proposes a new way of looking at economics, and as such will be of use to researchers and students of economics, business, social sciences and the sciences as well as think tanks and advocacy groups interested in heterodox economics.

This volume confronts and debates the issues faced by the growing field of experimental economics. For example, as experimental work attempts to test theory, it raises questions about the proper relationship between theory and experiments. As experimental results are used to inform policy, the utility of these results outside the lab is questioned, and finally, as experimental economics tries to integrate ideas from other disciplines like psychology and neuroscience, the question of their proper place in the discipline of economics becomes less clear. Volumes II and III of Experimental Business Research include original papers that were presented at the Second Asian Conference on Experimental Business Research held at the Hong Kong University of Science and Technology (HKUST) on December 16-19, 2003. The conference was organized by the Center for Experimental Business Research (cEBR) at HKUST and was chaired by Professors Amnon Rapoport and Rami Zwick. Experimental Business Research adopts laboratory based experimental economics methods to study an array of business and policy issues spanning the entire business domain including accounting, economics, finance, information systems, marketing and management and policy. "Experimental economics" is an established term that refers to the use of controlled laboratory-based procedures to test the implications of economic hypotheses and models and discover replicable patterns of economic behavior. We have coined the term "Experimental Business Research" in order to broaden the scope of "experimental economics" to encompass experimental finance, experimental accounting, and more generally the use of laboratory-based procedures to test hypotheses and models arising from research in other business related areas, including information systems, marketing and management and policy. The chapters included in these volumes reflect the domain diversity of studies in the experimental business research field.

Six British economists address economic ideas, beliefs, and arguments regarding the causes and possible solutions to unemployment. An overview essay by Bernard Corry is followed by an essay in which Terry Peach addresses Ricardo's debates with Malthus on unemployment following the Napoleonic wars, while Jose Harris examines unemployment from 1870 to 1914. George Peden evaluates the interwar British Treasury's rejection of borrowing to counter unemployment and Alan Budd's paper is on the theory and practice of unemployment policy since WWII. Includes a concluding contribution by Walter Eltis. Annotation copyright by Book News, Inc., Portland, OR

Forest resources are an ideal starting point for economic analysis of sustainability. In this book, leading economists discuss key aspects of sustainability and sustainable forest management including complexity, ethical issues, consumer choice theory, intergenerational equity, non-convexities, and multiple equilibria. This systematic critique of neoclassical economic approaches is followed by a companion work, *Institutions, Sustainability, and Natural Resources: Institutions for Sustainable Forest Management*, Volume 2 in the series.

Part of the *Handbook of the Philosophy of Science Series* edited by: Dov M. Gabbay King's College, London, UK; Paul Thagard University of Waterloo, Canada; and John Woods University of British Columbia, Canada. *Philosophy of Economics* investigates the foundational concepts and methods of economics, the social science that analyzes the production, distribution and consumption of goods and services. This groundbreaking collection, the most thorough treatment of the philosophy of economics ever published, brings together philosophers, scientists and historians to map out the central topics in the field. The articles are divided into two groups. Chapters in the first group deal with various philosophical issues characteristic of economics in general, including realism and Lakatos, explanation and testing, modeling and mathematics, political ideology and feminist epistemology. Chapters in the second group discuss particular methods, theories and branches of economics, including forecasting and
