The purpose of this book is to shed light on the performance and personal competencies of information technology (IT) project managers in South Africa. Predictive models are built to determine what project managers consider the crucial competencies they should possess to deliver an IT project successfully. This investigation takes place in the context of poor IT project success rates globally and, in particular, in South Africa. This novel research seeks to extend the debate on project success beyond what constitutes success or failure, but seeks to find clarity in what IT project managers believe are the essential competencies in practice. This quantitative research gathered data by way of an online survey based on literature regarding the Project Management Competency Development Framework (PMCDF). The population consisted of IT project managers in South Africa. Four hundred and two respondents chose to share their insights. Through the use of descriptive and multivariate statistics, major

competency factors were identified. These factors were used in structural equation modelling to build various validated predictive models. This book contributes to the current body of knowledge by uncovering the competencies that IT project managers consider themselves competent in. The structural equation models indicated predictors of perceived competence by IT project managers and where these perceived competencies differ from literature. Twelve managerial implications are highlighted in the final chapter that seek to draw the myriad threads together into a coherent summary. It is apparent that IT project managers do not consider the PMCDF important in its entirety, but instead choose to focus on certain competencies.

This book features research presented and discussed during the Research & Innovation Forum (Rii Forum) 2020. As such, this book offers a unique insight into emerging topics, issues and developments pertinent to the fields of technology, innovation and education and their social impact. Papers included in this book apply inter- and multi-disciplinary approaches to query such issues as technology-enhanced teaching and learning, smart cities, information systems, cognitive computing and social networking. What brings these threads of the discussion together is the question of how advances in computer science which are otherwise largely incomprehensible to researchers from other fields can be effectively translated and capitalized on so as to make them beneficial for society as a whole. In this context, Rii Forum and Rii Forum proceedings offer an

essential venue where diverse stakeholders, including academics, the think tank sector and decision-makers, can engage in a meaningful dialogue with a view to improving the applicability of advances in computer science.

With so many organisations using projects to implement change, and easy-to-use computer packages greatly reducing the mechanistic aspects of project planning, project managers now require more highly developed leadership skills than even before. Managing Projects, Managing People draws on theoretical aspects of managing and mitigating risks, motivational and leadership theory and excellent communication to provide the reader with the skills required for project management in today's business environment. In addition to the theoretical foundations, attention is given to PRINCE (Projects IN Controlled Environments) that supports and frames the application of projects to ensure conformance, compliance, adequate reporting procedures, due diligence and communication to all stakeholders. Managing Projects, Managing People takes a nontraditional approach to project management and is designed to facilitate the reader's understanding of the principles of managing a project. The book addresses most types of project, but particular emphasis is given to the non-manufacturing sector and, especially, the services sector. Chapters contain examples and relevant case studies to further demonstrate and support the foundations and skills addressed throughout. For academics prescribing this text, a comprehensive instructor's manual and power point presentations are provided on CD.

This book captures the essence of current workforce development perspectives and draws on extensive global research to uncover a range of issues confronting organisations. Taking primarily an Australian outlook after the global financial crisis and tracing the progress of a national industry sector, each chapter delves into a major area of interest for leaders. Overall, the authors make the case that workforce development is an amalgam of activities influenced by context, politics and economic development. As the world becomes increasingly connected and mobile, workforce development is proving to be a major activity for organisations because it impacts their longer-term survival and growth. To stay ahead, successful organisations focus on attracting, building, engaging and retaining talented people. However, in a financially turbulent era where strategy changes quickly, workforce development must not only plan and build the capabilities of people at work, but also contribute to making employment more

socially sustainable for a better world. This book provides a thought-provoking collection of scholarly work for business leaders, human resource practitioners and academics working in adult education, business, psychology and social science disciplines. At the same time, it adopts an accessible style for students and others who want to know more about the development of people at work.
