This book explores the cultural history of embryology in Tibet, in culture, religion, art and literature, and what this reveals about its medicine and religion. Filling a significant gap in the literature this is the first in-depth exploration of Tibetan medical history in the English language. It reveals the prevalence of descriptions of the development of the human body – from conception to birth – found in all forms of Tibetan religious literature, as well as in medical texts and in art. By analysing stories of embryology, Frances Garrett explores questions of cultural transmission and adaptation: How did Tibetan writers adapt ideas inherited from India and China for their own purposes? What original views did they develop on the body, on gender, on creation, and on life itself? The transformations of embryological narratives over several centuries illuminate key turning points in Tibetan medical history, and its relationship with religious doctrine and practice. Embryology was a site for both religious and medical theorists to contemplate profound questions of being and becoming, where topics such as pharmacology and nosology were left to shape secular medicine. The author argues that, in terms of religion, stories of human development comment on embodiment, gender, socio-political hierarchy, religious ontology, and spiritual progress. Through the lens of embryology, this book examines how these concerns shift as Tibetan history moves through the formative 'renaissance' period of the twelfth through to the seventeenth centuries.

Nearly 10 years have elapsed since I finished writing the first edition of Introduction to Molecular Embryology. During this period, molecular embryology has made great strides forward, but without undergoing a major revolution; therefore,

the general philosophy and outline of the book have remained almost unchanged. However, all the chapters had to be almost completely rewritten in order to introduce new facts and to eliminate findings which have lost interest or have been disproved. There was a major gap in the first edition of this book: very little was said about mammalian eggs despite their obvious interest for mankind. Research on mammalian eggs and embryos is so active today that this important topic deserves a full chapter in a book concerned with molecular embryology. Therefore, I am very thankful to my colleague Dr. Henri Alexandre, who has written a chapter on mammalian embryology (Chap. 9) and has prepared all the illustrations for this book.

Excerpt from Quiz Questions on Embryology, Operative Dentistry and Dental Pathology The purpose of this volume of questions is to aid the students of The Louisville College of Dentistry in their study of the subjects presented in the lectures by the professor of Embryology, Operative Dentistry and Dental Pathology. It is in no sense intended to be considered a text-book, nor is it expected that It will take the place of text-books. On the contrary, the object the writer has had in mind is to encourage the extensive use of text-books by the students and it is hoped that these questions will but prove an incentive and a guide to further study of the subjects merely outlined in this volume. On Embryology the student is recommended to the careful study of the chapters in Vol. 1 of The American System of Dentistry on Dental Embryology and Histology by W. Xavier Sudduth, M. D., D. D. S., and to chapter II in the work on Operative Dentistry by Dr. John Sayre Marshall. This latter treatise is beautifully illustrated and the text is clear and comprehensive. In the arranging of a lecture course on Operative Dentistry tribute has been levied upon the writings of a number of authors to whom acknowledgment is hereby made.
