A bear almost gives up his search for his missing hat until he remembers something important.

Our cosmic tour begins here. As we leave the secure confines of the Earth and journey into space, we find a plethora of strange and unexpected phenomena. Little can we anticipate from the quiet, star-studded sky the violent events in the cosmos. Stars explode. Powerful radio sources eject matter in jets. The ever-changing Universe grows more beautiful and more complex the deeper into it we go. Professor Narlikar skillfully steers us through a cosmic journey of discovery, starting from the Earth and Solar System and stepping out to the farthest reaches of the Universe. Using simple analogies, humorous anecdotes, and a wealth of illustrations, he conveys the thrill of observing strange and surprising features of the Universe. The seven wonders represent a range of mysterious phenomena, a class of spectacular events, or remarkable cosmic objects that have challenged human curiosity and defied explanation. They concern the giants and dwarfs of the stellar world, the catastrophic explosion of massive stars, pulsars--the ultimate timekeepers of the cosmos, the strange effects of gravity, illusions of space, and the majestic expansion of the Universe as a whole. With lucid prose, the author weaves together a host of exciting recent discoveries in astronomy and shows us how these motivate astronomers to unravel the wonders of tomorrow.

Starting with theories behind the law, the book then examines all aspects of resource disputes, including economic, scientific, political and ethical considerations. It explores the challenges presented by common pool resources, scientific uncertainty, mismatched scale, market failures and institutional adequacy. The book also considers resource law and management on both public lands and private property, as well as in international settings. Cognitive Linguistics has given a major impetus to the study of semantics and the lexicon. The present volume brings together seventeen previously published papers that testify to the fruitfulness of Cognitive Linguistics for the study of lexical and semantic topics. Spanning the period from the late 1980s to recent years, the collection features a number of papers that may be considered classics within the field of cognitive linguistic lexicology. The papers are grouped in thematic sections. The first section deals with prototypicality as a theoretical and practical model of semantic description. The second section discusses polysemy and criteria for distinguishing between meanings. The third section tackles questions of meaning description beyond the level of words, on the level of idioms and constructions. The following section casts the net even wider, dealing with the cultural aspects of meaning. Moving away from the theoretical and descriptive perspective towards applied concerns, the fifth section looks at lexicography from the point of view of Cognitive Linguistics. The final section has a metatheoretical orientation: it discusses the history and methodology of lexical semantics. Each paper is preceded by a newly written introduction that situates the text against the period in which it was first published, but that also points to further developments, in the author's own research or in Cognitive Linguistics at large. The variety of topics dealt with make this book an excellent introduction to the broad field of lexicological and lexical semantic research.
