For many years, concerns have been expressed about environmental issues in the Arctic. While the Arctic region, unlike Antarctica, has been inhabited for thousands of years, it is under unique threat because of its vulnerability toward resource exploitation and the deposition of various airborne pollutants. With its varied populations, and with eight Nations asserting territorial interests, the Arctic needs a careful approach to its protection and development. This report describes the current Arctic environmental legal regime. It also discusses the possibility of negotiating a sustainability treaty for the Arctic with high standards of environmental protection similar to those in the 1991 Protocol on Environmental Protection to the Antarctic Treaty. It is hoped that this review of the legal and policy contrasts between the Arctic and Antarctic can help in the consideration of future directions for the Arctic legal regime.

This edition includes material on environmentalism and the law, international environmental law, access to environmental justice, noise pollution and new legislation on pollution prevention and new case law.

Legal Order in the World's Oceans: UN Convention on the Law of the Sea assesses the impact of the 1982 Convention on the Law of the Sea (UNCLOS) and many aspects and challenges of modern law of the sea.

Revised and updated since the publication of the best-selling Seventh Edition, this text continues to emphasize the major concepts essential to the practice of environmental science, technology, and chemistry while introducing the newest innovations to the field. The author provides clear explanations to important concepts such as the anthrosphere, industrial ecosystems, geochemistry, aquatic chemistry, and atmospheric chemistry, including the study of ozone-depleting chlorofluorocarbons. The subject of industrial chemistry and energy resources is supported by pertinent topics in recycling and hazardous waste. Several chapters review environmental biochemistry and toxicology, and the final chapters describe analytical methods for measuring chemical and biological waste. New features in this edition include: enhanced coverage of chemical fate and transport; industrial ecology, particularly how it is integrated with green chemistry; conservation principles and recent accomplishments in sustainable chemical science and technology; a new chapter addressing terrorism and threats to the environment; and the use of real world examples.

Written by two internationally respected authors, this unique primer distills the environmental law and policy of the United States into a practical guide for a nonlegal audience, as well as for lawyers trained in other regions. The first part of the book explains the basics of the American legal system: key actors, types of laws, and overarching legal strategies for environmental management. The second part delves into specific environmental issues (pollution, ecosystem management, and climate change) and how American law addresses each. Chapters include summaries of key concepts, discussion questions, and a glossary of terms, as well as informative "spotlights"--brief overviews of topics. With a highly accessible structure and useful illustrative features, *A Guide to U.S. Environmental Law* is a long-overdue synthetic reference on environmental law for students and for those who work in environmental policy or environmental science. Pairing this book with its companion, *A Guide to EU Environmental Law*, allows for a comparative look at how two of the most important jurisdictions in the world deal with key environmental problems.

As conservation of the environment plays an increasingly important role within society, Birnie, Boyle, and Redgwell's *International Law and the Environment* continues to be an essential read for students and practitioners alike. Written by experts in the field, the authors employ sharp and thorough analysis of the laws, allowing them to share their extensive knowledge and experience with the reader. The authors provide a unique perspective on the implications of international regulation, promoting a wider understanding of the pertinent issues impacting upon the law.

This research examines the growth and expansion of public interest environmental litigation (PIEL) in India and analyses the changes that are influencing the development of PIEL in Bangladesh and Pakistan. The necessity for this research lies in the rapid degradation of environment and the need of efficient environmental management in the three countries of the South Asian region. Here, we compare the legal systems of the three countries from the environmental point of view, discuss new ideas and directions and critically analyse the legal provisions that would help to apply environmental norms. These offer the legislators a chance to find out what can be applied in their own region, thus developing their existing legal mechanisms. About the author Jona Razzaque is barrister and holds a PhD in law from the University of London. She works in the field of access to environmental justice and has published numerous articles on this issue. She taught law in Queen Mary College and School of Oriental and African Studies under the University of London. She is currently working as a lawyer in the Foundation for International Environmental Law and Development (FIELD) on cross-themed projects related to bio-diversity, trade and climate change.

The application of criminological perspectives to discussion of the environment is a rapidly developing field at the cutting edge of criminology.
