

Ephemerides Ephemeris For Year 1900 2100 Astrology

Volume 5: Galactic Ephemeris for the Moon 1900 - 2000 AD. With listings twice every day, at Midnight and Noon GMT. This is one of 15 Volumes of Galactic Geocentric Ephemerides accompanying Volume 1, Galactic Geocentric Astrology. As Uranus now opens the Age of Aquarius, here are Ephemerides opening up a whole new World of Astrology. The Geocentric Galactic One. But these Galactic Geocentric Ephemerides should only be used with Galactic Geocentric Charts. So make sure you also have Volume 1 of this Series, which contains: Part One: Galactic Astrology Tool Kit, with everything you need to be able to calculate and construct Galactic Geocentric Astrology Charts. Everything, except Global Listings of Daylight Savings Time and a World Atlas. But including Table of Houses etcetera, as well as Precession through the Zodiac Stars, and the Ancient Earth Zodiac. Volume 1 also has a Part Two: Galactic Awakening in the Age of Aquarius. It simply plunges depths of ReDiscovery and Understanding never before published. From the ReDiscovery of Ancient Chaldean Astrology in modern form. Via the ReDiscovery of what the Star of the Magi actually was. And what it will be again. To the Transiting of Pluto, Neptune and Uranus to the Great Cross in the Heavens around the Exact Beginning of the New Age, exposing the Hidden Forces behind Modern Politics, with important threads from 1605 to 2011. Exemplified by the Tropical and Galactic Charts for the Richest Man in Modern History, the Greatest Spy in the History of Norway, and the Greatest Revolutionary alive as of this writing, which happens to be his 69th Birthday. As well as Tropical and Galactic Charts for the Age of Aquarius, 11 September 2001, and the United States of America. Having already acquainted yourself with Volume 1, and perhaps constructed your own, or a bunch of Galactic Birth Charts, the one Volume which you are holding in your hand will then hopefully let you in on the Galactic Secrets and Positions you are looking for. In this new addition to Modern Astrology. Morten Alexander Joramo

Les New International Ephemerides 1900-2050, légères et pratiques, sont les éphémérides Auréas les plus vendues. Elles contiennent les positions des planètes, des Nouds lunaires (vrais et moyens) et de la Lune noire (vraie et moyenne). Eclipses solaires et lunaires. Phases de la Lune. Stations directes et rétrogrades. Ingrès planétaires, etc. Les explications sont données en cinq langues.

Available March 2008- the ultimate ephemeris for the years when all but the youngest among us were born. Neil F. Michelsen's The American Ephemeris for the 20th Century, 1900-2000 at Midnight became the most highly trusted and widely used reference work for astrologers worldwide. Now substantially revised, updated and expanded by Rique Pottenger, The New American Ephemeris for the 20th Century, 1900-2000 at Midnight, Michelsen Memorial Edition, has improvements and

refinements that permit more accurate station times, a more accurate position for the Galactic Center and more. Ceres is added to daily longitude listings, Sun through Pluto, and monthly positions are provided for Eris, Chiron, Pallas, Juno and Vesta.

The World Ephemeris is the first computer calculated and typeset ephemeris with letter-quality printing. Now ease and clarity in reading is combined with accuracy and precision of data to provide the most complete and convenient ephemeris available for astrological calculation and analysis. The Sun's position is accurate to the second of arc; the Moon's mean Node and nine planetary positions are given to the minute of arc for every day of the 21st Century. One hundred and one years in all.

In this review talk, I would like to report on the proper motion analysis, which has been recently carried out together with M. Soma and M. Yoshizawa: There has been a persistent demand in astronomy for accurate stellar positions and proper motions, which are represented by an inertial reference system constructed on the basis of a set of consistent astronomical constants. In the reference system the precessional constant plays a primary role. In a series of papers Fricke (1967a,b, 1977a,b) has determined the luni-solar precessional correction to Newcomb's value and the fictitious motion of the equinox, which have been adopted in the "IAU (1976) System of Astronomical Constants". Based on the precessional correction and the equinoctial motion thus established, the fundamental reference system, the FK5 system (Fricke et al. 1988) for positions and proper motions, has been constructed. However, for several years geodetic VLBI (McCarthy & Luzum 1991) and LLR (Williams et al. 1991) observations have been suggesting an additional correction to the luni-solar precessional constant of the IAU (1976) System. That is, these observations indicate the precessional correction of $6. \mu \sim -0.'30/\text{cent}$ to the FK5 system. But, the observational period of the earth orientation is considered to be still insufficient to separate unambiguously the precessional change of the earth orientation from the nutation with the longest period of 18.6 years.

Portfolio of 8 charts accompanies v. 83.

Volume 3: Galactic Ephemeris for the Twentieth Century AD 1900-2000. With listings every other day at Midnight GMT, for Sun, Moon, Mercury, Venus, Mars, Jupiter, Saturn, Chiron, Uranus, Neptune, Pluto and the Lunar North Node. This is one of 15 Volumes of Galactic Geocentric Ephemerides accompanying Volume 1, Galactic Geocentric Astrology. Astrology at the cutting edge. Raphael's - with its peerless reputation for accuracy - is the world leader among pocket Ephemerides. Now there is essential new data in three 51 year volumes. The new family members are Chiron, Lilith, Ceres, Pallas, Juno and Vesta. A Ready Reckoner also lends fresh accuracy to calculations. Today, astrologers are learning of new cosmic discoveries. With Raphaels, keeping track of them and the future everything is made simpler for you.

I have been doing astrological readings for some forty-plus years. Back in the day, my most-

used book was a little volume by Hugh McCraig called the "200-Year Ephemeris," which basically was a list of geocentric planets giving the planet positions at the first of each month. When I did a reading with a client, this was the book I reached for to see where Saturn or other planets today were in the natal chart. With the McCraig book in mind, I wanted to create something similar, but what I also needed were graphic wheels to see at a glance where the planets are in the zodiac and what major aspect patterns are present. The StarTypes Visual Ephemerides do all of this and more. Each month has a 360-degree open chart when with planets and aspect patterns drawn in plus a listing of the Sun, Moon, planets and lunar node by degrees and minutes. Given this information, it is easy to flip through the pages and watch the kaleidoscopic aspect patterns change in the sky - perfect for readings.

Derived using NASA's very latest laboratory ephemeris DE406/LE406, 'Raphael's 151-Year Ephemeris, 1900-2050' analyses the positions of the planets using half-day intervals, not one day intervals, for greater accuracy.
