This report examines national energy usage in existing commercial buildings, methods of reducing energy consumption through conservation, and the resulting costs and benefits. It includes a wide range of opportunities and options to save energy and operating costs through proper operation and maintenance. It also includes minor modifications to the building and mechanical and electrical systems which can be implemented promptly with little if any investment costs. Network forensics is an evolution of typical digital forensics, in which evidence is gathered from network traffic in near real time. This book will help security and forensics professionals as well as network administrators build a solid foundation of processes and controls to identify incidents and gather evidence from the network. Forensic scientists and investigators are some of the fastest growing jobs in the United States with over 70,000 individuals employed in 2008. Specifically in the area of cybercrime and digital forensics, the federal government is conducting a talent search for 10,000 qualified specialists. Almost every technology company has developed or is developing a cloud computing strategy. To cut costs, many companies are moving toward network-based applications like Salesforce.com, PeopleSoft, and HR Direct. Every day, we are moving companies' proprietary data into a cloud, which can be hosted anywhere in the world. These companies need to understand how to identify where their data is going and what they are sending. Key network forensics skills and tools are discussed-for example, capturing network traffic, using Snort for network-based forensics, using NetWitness Investigator for network traffic analysis, and deciphering TCP/IP. The current and future states of network forensics analysis tools are addressed. The admissibility of network-based traffic is covered as well as the typical life cycle of a network forensics investigation.

"The book Practical Implementation in Social Work Practice: A Guide to Engaging in Evidence-Based Practice provides social work practitioners and students with guidance on engaging in the process of evidence-based practice (EBP), with an emphasis on implementation of high quality interventions. The book begins with an overview of the process of EBP, and the relationship between EBP and implementation. In subsequent chapters, readers are provided with practical tips and frameworks to support

identification of evidence-supported interventions and preparation for the implementation of selected interventions in practice. Later chapters examine more closely the assessment of intervention alignment with clients and service contexts, how to determine if an intervention must be adapted before implementation, and guides readers through the adaptation of interventions if needed. Fidelity strategies are then reviewed to support the ongoing implementation of interventions at a high level of quality. Examples are used throughout the book to provide the reader with concrete illustrations of the application of more abstract concepts and each chapter includes discussion questions to guide class discussions for instructors. The book ends with a chapter on some of the future trends and continuing challenges in EBP and implementation science in social work"--

protracted global uncertainty combined with frequent episodes of capital flow volatility have intensified demand for liquidity support. In response to calls from the IMFC and the G20, the Fund has identified gaps in the global financial safety net (GFSN) and the Fund's lending toolkit for crisis prevention, including insufficient coverage against liquidity pressures resulting from volatile capital flows. The proposals in this paper draw on the previous Fund work on the adequacy of the GFSN, the review of the Fund's current toolkit for crisis prevention, and extensive consultations with the membership. The review of the FCL concludes that the FCL has been effective in providing precautionary support against external tail risks. Successor FCL arrangements and associated access levels have been in line with the assessment of external risks and potential balance of payments needs. However, there is scope to strengthen the transparency and predictability of the qualification framework by adding indicator-based thresholds to complement and inform judgment. To enhance crisis resilience while improving the Fund's toolkit coherence and resource use, the paper proposes three complementary reforms: The establishment of a Short-term Liquidity Swap to provide renewable and reliable liquidity support against potential short-term moderate volatility of capital flows. The proposed instrument is for members with very strong fundamentals and economic policies, and tailored to improve reliability and appeal to users. The use of a core set of indicators with thresholds to guide judgment in FCL qualification. This will improve predictability and transparency while keeping the standards unchanged. The elimination of the PLL to maintain a streamlined and coherent toolkit, given the low use of the PLL, likely reflecting issues of tiering with the FCL. The paper also discusses possible reforms of the current commitment fee policy to promote a more balanced use of Fund resources. Possible options include increasing the commitment fee at high access levels or introducing a new time-based commitment fee.

A number of widely used contemporary processors have instruction-set extensions for improved performance in multi-media applications. The aim is to allow operations to proceed on multiple pixels each clock cycle. Such instruction-sets have been incorporated both in specialist DSPchips such as the Texas C62xx (Texas Instruments, 1998) and in general purpose CPU chips like the Intel IA32 (Intel, 2000) or the AMD K6 (Advanced Micro Devices, 1999). These instruction-set extensions are typically based on the Single Instruction-stream Multiple Data-stream (SIMD) model in which a single instruction causes the same mathematical operation to be carried out on several operands, or pairs of operands, at the same time. The level of parallelism supported ranges from two floating point operations, at a time on the AMD K6 architecture to 16 byte operations at a time on the Intel P4 architecture. Whereas processor architectures are moving towards greater levels of parallelism, the most widely used programming languages such as C, Java and Delphi are structured around a model of computation in which operations takeplace on a single value at a time. This was appropriate when processors worked this way, but has become an impediment to programmers seeking to make use of the performance offered by multi-media instruction -sets. The introduction of SIMD instruction sets (Peleg et al.

*Clinical Research in Practice: A Guide for the Bedside Scientist* is a straightforward guide to reading, evaluating, and using research in these clinical settings. The text helps the bedside scientist take a study from question to design to practice.

Contributed presentations were given by over 50 researchers representing the state of parallel CFD art and architecture from Asia, Europe, and North America. Major developments at the 1999 meeting were: (1) the effective use of as many as 2048 processors in implicit computations in CFD, (2) the acceptance that parallelism is now the 'easy part' of large-scale CFD compared to the difficulty of getting good per-node performance on the latest fast-clocked commodity processors with cache-based memory systems, (3) favorable prospects for Lattice-Boltzmann computations in CFD

(especially for problems that Eulerian and even Lagrangian techniques do not handle well, such as two-phase flows and flows with exceedingly multiple-connected domains with a lot of holes in them, but even for conventional flows already handled well with the continuum-based approaches of PDEs), and (4) the nascent integration of optimization and very large-scale CFD. Further details of Parallel CFD'99, as well as other conferences in this series, are available at <http://www.parcfd.org>

Laser welding is a high-energy process used in a wide range of advanced materials to obtain micro- to macro-sized joints in both similar and dissimilar combinations. Moreover, this technique is widely used in several industries, such as automotive, aerospace, and medical industries, as well as in electrical devices. Although laser welding has been used for several decades, significant and exciting innovations often arise from both the process and/or advanced materials side.

In the Design Professional's Guide to Zero Net Energy Buildings, Charles Eley draws from over 40 years of his own experience, and interviews with other industry experts, to lay out the principles for achieving zero net energy (ZNE) buildings, which produce as much energy as they use over the course of a year. Eley emphasizes the importance of building energy use in achieving a sustainable future; describes how building energy use can be minimized through smart design and energy efficiency technologies; and presents practical information on how to incorporate renewable energy technologies to meet the lowered energy needs. The book shows the reader through examples and explanations that these solutions are viable and cost effective.
