of these subjects and should be kept constantly at hand so
that it can readily be consulted when difficult topics arise. I
hope that it may succeed in reducing the fear with which
many nurses face the sciences with which the book deals.
Section 1 BIOLOGY 2 The cell and its requirements The
world of living things is conveniently and conven tionally
divided into two great groups, the animals and the plants.
Broadly speaking the important feature which distinguishes
plants is that they can manufacture most of the substances
they require by trapping and using various forms of outside
energy, in particular the energy of sunlight. In the process of
photosynthesis they utilize the energy of light to build up
complex chemical substances from relatively simple ones. In
contrast, animals lack the ability to use light or any other form
of outside energy. Instead they must obtain the energy they

require by breaking down complex substances which ultimately they always obtain from plants. Plant-eating animals such as cows and sheep obtain these substances directly. Carnivores obtain them indirectly after they have passed through the bodies of other animals.
