This book covers all essential evidence on perioperative care and anesthetic concerns for cancer surgeries, including the evaluation and assessment of patients' schedule for cancer surgeries, perioperative anesthetic management of various cancers, perioperative analgesia for cancer surgeries, and issues related to inoperable cancers. It reviews anesthetic considerations of all cancer types as there is a wide variation in anesthetic requirements in this subset of patients. Cancer surgeries are on the rise worldwide and healthcare facilities with cancer as a core specialty are emerging quickly around the globe. As cancer is on rise and efficient surgical management is available, more and more patients are being treated surgically. However, cancer surgeries are complicated, have varied concerns and these are not covered sufficiently in presently available textbooks of anesthesiology. This book fulfills the growing need for complete and comprehensive textbook of onco-anesthesia and fills the gap in the current texts that do not exclusively cover anesthesia for cancer surgeries. This textbook serves as a comprehensive but quick guide for trainee residents/fellows and practicing anesthesiologists, clinicians and surgeons.

Essential Clinical Anesthesia Cambridge University Press

It is a pleasure to have the privilege of writing the foreword for a book edited by Dr. Francis F. Foldes. Dr. Foldes has collected in one convenient place a discussion and description of enzyme systems of use to the anesthesiologist and to those other individuals, such as undergraduate and graduate students in related basic sciences, who will profit by and can make use of this body of information. The practicing anesthesiologist and those who work in related fields have become increasingly aware of the need to understand enzyme activities which influence the uptake, distribution, and excretion of those substances that are used in the anesthetic management of surgical patients. A variety of such is obvious when one considers that such diverse substances as activities and muscle re analgesic drugs, tranquilizers,

hypnotics, anesthetic agents, laxants are strongly affected by these systems and have an influence over the basic understanding of how these drugs operate and act in the body, as well as providing a safety measure so necessary to the proper conduct of clinical anesthesia. The editor and his colleagues have rendered us a great service in collecting information that deals with the basic activity of enzymes including their structure, their kinetics, and to the degree that knowledge permits, mechanism of actions.

There is a large influx of trauma, general surgical, pediatric, neurosurgical and obstetric emergencies as the hospital is one of the major public hospitals located in a densely populated region sitting amidst major routes in the city. It also provides services for emergency cardiovascular, cerebrovascular interventions and cadaver transplants. Daily lessons from this tremendous emergency work inspired us to bring out this book. There is plethora of reference material available in basic sciences related to anesthesiology, namely physiology, pharmacology, physics and anatomy. Similarly, a large number of textbooks are on techniques such as general, regional, monitored anesthesia care as well as super specialties like cardiac, neurosurgical and pediatric anesthesia, etc. But there is a limited availability of books and references for emergency anesthesia. One has to scan and integrate parts from various sources. This book is an attempt to assimilate the scattered information and add clinical expertise. Contents of this book have been divided into nine sections to cover majority of the emergencies. General considerations for adults, obstetric and pediatric sections have been written separately to avoid duplication. An additional challenge is cases with various medical disorders for emergency surgeries. Efforts have been taken to accommodate them in first section and obstetric section. The contributors of this book work together at LTMMC and LTMGH and have a well-balanced team with fresh talent bringing the latest technological knowledge and tenured practitioners supplementing it with applied experience. Part of the team worked on collection of the matter from different sources for an ideal scenario, while the senior faculty members used their vast clinical experience for a more practical and realistic application. These combined efforts have been truly beneficial to achieve our goal to rationally mix latest technology with clinical experience and identify potential ways to conduct anesthesia with best results, at least costs and minimum risk.

Trusted authorities deliver the key cardiac anesthesia knowledge you need to know. A concise, user-friendly format and key points boxes in each chapter help you quickly locate crucial information. Annotated references guide you to the most practical additional resources. A portable size and clinical emphasis facilitates and enhances bedside patient care. Designed as a companion to Kaplan's Cardiac Anesthesia. Includes new topics vital to the current practice of cardiac anesthesiologists, such as transesophageal echocardiography; percutaneous valve procedures; new pacemakers and automatic internal defibrillators used for cardiac resynchronization therapy; left ventricular assist devices and extracorporeal membrane oxygenation therapy of heart failure; and patient safety issues. Focuses on today's most current and relevant therapies, including New Cardiac Drugs, and Heart Mate, Heart Ware, and Impella LVADs. Describes care of the cardiac patient in Hybrid Operating Rooms, Catheterization Laboratories, and Electrophysiology Laboratories, as well as the Cardiac Operating Rooms. Perfectly suited for residents, fellows, nurse anesthetists and anesthesiologists in practice.

Ability to learn from errors is an essential aspect of the quest to improve treatment quality and patient safety. This book consists of 33 cases in anesthesiology that is based on real life situations and illuminate avoidable complications and mishaps. The cases are presented in a novel manner in that they are embedded within narratives. The reader comes to each case "cold", without any clue as to the content, and each case comprises a narrative and a factual component that are interwoven. The narrative parts provide the reader with information and tips regarding the clinical problems and tasks that the protagonist must face and try to solve. The idea is to engage the reader emotionally while reading and to entertain him or her while learning. All cases conclude with short debriefing sections which include possible strategies to prevent similar errors or mishaps.
