Struggling to do a project or dissertation, evaluate published research or conduct your own research? Help is at hand with this 5th edition of *Research Methods for Clinical Therapists*, which explains, in a clear and simple manner, how to evaluate existing research and how to conduct your own research. Aimed at undergraduate and postgraduate students, as well as the practising health care professional, the focus of the text is the design and analysis of experimental studies. These are vital to the effectiveness studies that are central to the work of the healthcare professional. Specific examples from different areas of healthcare are used to explain the core research concepts and relate them to clinical situations. Statistical theory and jargon are kept to a minimum. 'Key concept' boxes to explain technical research terms Activities and exercises (with answers provided in an appendix) to reinforce learning Sample critique of a published research article Comprehensive coverage of the key components of a robust research study Explanation of basic mathematical concepts Extended section on calculating sample sizes Guidelines on the preparation of posters Calculation of Inter-rater reliability measures, including Cohen's Kappa, ICC (interclass correlation) and Bland-Altman graphs of inter-rater agreement Introduction to Receiver Operating Characteristics, for use in screening and diagnostic testing against gold-standards The Thurstone Paired Comparison Technique, valuable in capturing the user voice on a variety of service planning, design and development issues Undertaking Systematic Reviews Relevant further reading for each chapter to support readers in their work.

*Excel Comprehension and Written Expression Year 7* is essential for any student wishing to improve their comprehension skills. It allows students to practice skills such as finding facts, making references, isolating relevant information, understanding questions and paragraphs, and using tables of contents, indexes, maps and graphs to find information. The extracts are from a wide variety of genres to allow students to gain confidence in reading different materials. On several occasions extracts are reused. This is done to demonstrate that different comprehension skills can be developed from the same piece of writing. Comprehension skills are interdependent. As the student's ability to comprehend increases he/she will also be expected to interpret data. This includes the interpretation of information found in charts, in tables and on maps. In this book your child will find: over 60 graded units of stimulating exercises and extracts a wide variety of questions including true or false, multiple choice, short answer and sentence completion extracts from many different literary and factual text types a lift-out answer section

*Essential Statistics for Economics, Business and Management* assumes no prior knowledge of statistics. It will also be highly relevant for the statistics component of courses in quantitative methods. The style of the book is similar to that of the highly successful *Essential Mathematics for Economics and Business* by Teresa Bradley and Paul Patton, with many worked examples integrated throughout. Emphasis is placed on verbalising concepts, problems and results of statistical analysis. This will help students learn how to start a problem, complete the calculations, and report the results in a way that makes sense to a non-statistician. Each concept is introduced with a brief but plausible explanation followed by *Worked Examples*. The *Worked Examples* will provide students with the necessary practice that they need in order to succeed at the subject. Emphasis is also placed on 'learning through doing' problems. Excel is used to encourage students in doing problems and to enhance understanding (with links to datasets online). Minitab printouts are also included in the text. *Skills Development Exercises* with brief solutions are included within the chapters, and *Progress Exercises* on theory and applications are provided at the end of each chapter. Solutions to all the worked examples and progress exercises are available as an appendix. Web-based supplementary materials will be provided for lecturers adopting the text, including additional exercises and solutions, excel datasets and exercises, powerpoint slides with key formula, figures and tables.

Students can access an online glossary and weblinks.
