This introductory textbook for business statistics teaches statistical analysis and research methods via business case studies and financial data using Excel, Minitab, and SAS. Every chapter in this textbook engages the reader with data of individual stock, stock indices, options, and futures. One studies and uses statistics to learn how to study, analyze, and understand a data set of particular interest. Some of the more popular statistical programs that have been developed to use statistical and computational methods to analyze data sets are SAS, SPSS, and Minitab. Of those, we look at Minitab and SAS in this textbook. One of the main reasons to use Minitab is that it is the easiest to use among the popular statistical programs. We look at SAS because it is the leading statistical package used in industry. We also utilize the much less costly and ubiquitous Microsoft Excel to do statistical analysis, as the benefits of Excel have become widely recognized in the academic world and its analytical capabilities extend to about 90 percent of statistical analysis done in the business world. We demonstrate much of our statistical analysis using Excel and double check the analysis and outcomes using Minitab and SAS—also helpful in some analytical methods not possible or practical to do in Excel. The Islamic Moral Economy is an academic book that analyzes the religious permissibility or lack thereof of the existing repertoire of financial instruments used in Islamic banking and finance. The work is both timely and sound, especially considering the growth of the international Islamic banking and insurance industries, and the Great Recession of 2007-2010. The Islamic Moral Economy is an excellent introductory book for academics and finance professionals wishing to gain a better understanding of Islamic moral constraints on economic transactions and how most current Islamic banking transactions are structured. More specifically, the author examines the utopian nature of the Islamic moral economy with a special emphasis on *riba* (i.e., financial interest and illogical increase), which is inescapable in the global interconnected economy, and therefore insoluble within the framework of the Islamic Moral Economy. Unlike other books on the subject, The Islamic Moral Economy places a special emphasis on the ubiquity of financial interest and illogical increase in both current Islamic banking and finance as well as conventional economics.

The book analyzes, compares, and contrasts tools and techniques used in risk management at corporate, strategic business and project level and develops a risk management mechanism for the sequencing of risk assessment through corporate, strategic and project stages of an investment in order to meet the requirements of the 1999 Turnbull report. By classifying and categorizing risk within these levels it is possible to drill down and roll-up to any level of the organizational structure and to establish the risks that each project is most sensitive to, so that appropriate risk response strategies may be implemented to benefit all stakeholders. "The new edition of this book provides a clear insight into the intricacies of corporate risk management and the addition of the case study exemplars aids understanding of the management of multiple projects in the real world." —Professor Nigel Smith, Head of the School of Civil Engineering, University of Leeds
