Over 2 million students have learned psychology from Dennis Coon. Serving as a guide and mentor to students, Coon uses humor and everyday analogies to make abstract concepts concrete, such as the cerebral cortex looks like a giant, wrinkled walnut. Using a consistent pedagogical structure, the author helps

students learn psychology by using the tested principles of Survey, Question, Read, Recite and Review. In addition, he helps them to master psychology with a fourth R, Relate, which requires them to relate their new knowledge to their own experience, helping abstract ideas to become concrete. The book uses a chunking principle, asking students to read major sections, then review them, before they go on. As the new title of the book indicates, PSYCHOLOGY: A MODULAR APPROACH TO MIND AND BEHAVIOR (formerly called ESSENTIALS OF PSYCHOLOGY) is now modular, and is the medium-sized text in a three-book set authored by Dennis Coon. By separating the chapters into modules, this edition goes even further in chunking content for student mastery. This text covers the basic set of topics but differs by having two chapters on development, a separate chapter on Gender and Sexuality (Chapter 15), and a concluding chapter on Applied Psychology (Chapter 17). The book is frequently described as fun because it presents topics that are of interest and relevance to students, relates it to their lives, and provides many engaging applications that students can use in their own lives. For teachers who want a book that students will read, enjoy, and savor Coon's text is the perfect choice. findings from psychological science. Combining extensive pedagogical support with an emphasis on active learning, the text challenges students to learn by doing -- to actively participate and to think about what they are learning rather than just passively read written information. The integrated pedagogical program helps students master the material by supporting the elements of the PQ4R (Preview, Question, Read, Recite, Review, and Reflect) study system. Douglas Bernstein also shows how topics in psychology are interrelated and guides students in thinking critically -- including organizing select research studies around questions to help readers think objectively about research and results. This book provides a comprehensive introduction to psychological assessment and covers areas not typically addressed in existing test and measurements texts, such as neuropsychological assessment and the use of tests in forensics settings. The book introduces the vocabulary of the profession and the most basic mathematics of testing early as being fundamental to understanding the field. Numerous examples are drawn from tests that the authors have written or otherwise helped to develop, reflecting the authors' deep understanding of these tests and their familiarity with problems encountered in test development, use, and interpretation. Following the introduction of the basic areas of psychometrics, the book moves to areas of testing that represent various approaches to measuring different psychological constructs (memory, language, executive function, etc.), with emphasis on the complex issue of cultural bias in testing. Examples of existing tests are given throughout the book; however, this book is not designed to prepare students to go out and administer, score, and interpret

specific psychological tests. Rather, the purpose of this book is to provide the foundational core of knowledge about tests, measurement, and assessment constructs, issues, and quantitative tools. Explains what constitutes a psychological test, how tests are developed, how they are best used, and how to evaluate their strengths and weaknesses; Describes areas of testing that represent different approaches to measuring different psychological constructs; Explains applications of psychological testing to issues in the courts; Addresses how test authors and publishers design and research tests to address the difficult and demanding issues of cultural differences in test performance and interpretation of test results.
