

Everybody Loves A Good Drought

???????

A first-of-its-kind book on social sector communication in India that combines concepts with hands-on skills Social sector communication helps address issues by influencing policy and can be used to bring about desired behavioral change among the targeted public. This book not only highlights the theoretical underpinnings, practice, and skill of social sector communications in India, but also provides an understanding of various tools and strategies required in development communication encompassing social marketing, media advocacy, social mobilization, grassroots communication, and corporate social responsibility (CSR). With the aid of case studies, it offers tips on how to plan campaigns; write a concept note, field report, and press release, and effectively use social media to achieve developmental program goals. The book discusses the different perspectives of NGOs and program implementers, and helps in understanding the corporate–NGO interface vis-à-vis CSR projects.

Drought has been a long companion in the human story. Mythologised as the devastating Bull of Heaven in one of the earliest heroic legends to come out of Mesopotamia, drought has continued to wreak havoc upon societies, in many cases playing a significant role in their final demise. For societies in the 21st Century drought hovers on all horizons, the ultimate drought-proofing of society - long sought - remains elusive. This study of the human conceptualization of drought in a global setting examines the historical record from early human society through to present day concerns to explore how and why attitudes to drought have changed and why the mitigation of its impacts has become more difficult. To offer a more lasting strategy for protection against drought, the author argues that physical scientists need to combine their skills in understanding global ecology and their technological expertise with the social scientists' awareness of the socio-economic, political and cultural contexts in which modern societies operate. Both will have to ensure that their cooperative strategies for drought management will be understood and supported by the public. If this cooperation can be achieved, the future rampages of the Bull of Heaven may be contained.

The problems created by metropolitanization have become increasingly apparent. Attempts to limit growth, disperse populations and plan neighbourhoods have been largely unsuccessful. Strategies are needed to improve the world's major cities in the twenty-first century. Tom Angotti is fundamentally optimistic about the future of the metropolis, but questions urban planning's inability to integrate urban and rural systems, its contribution to the growth of inequality, and increasing enclave development throughout the world. Using the concept of 'urban orientalism' as a theoretical underpinning of modern urban planning grounded in global inequalities, Angotti confronts this traditional model with new,

order to enrich and expand understanding of climate change and what to do about it. Complemented by a rich collection of examples and case studies, this book proposes a novel way of generating and analysing knowledge about climate change and how it may be used. The reader is introduced to new insights where the book:

- Provides a framework that explains the variety of simultaneous, co-existing and often contradictory perspectives on climate change.
- Reclaims everyday experiential knowledge as crucial for meeting global challenges such as climate change.
- Overcomes the science-citizen dichotomy and leads to new ways of examining public engagement with science. Scientists are also human beings with lived experiences that filter their scientific findings into knowledge and actions.
- Develops a 'public action theory of knowledge' as a tool for exploring how decisions on climate policy and intervention are reached and enacted.

While scientists (physical and social) seek to explain climate change and its impacts, millions of people throughout the world experience it personally in their daily lives. The experience might be bad, as during extreme weather, engender hostility when governments attempt mitigation, and sometimes it is benign. This book seeks to understand the complex, often contradictory knowledge dynamics that inform the climate change debate, and is written clearly for a broad audience including lecturers, students, practitioners and activists, indeed anyone who wishes to gain further insight into this far-reaching issue.

Practising Journalism brings together experts from the field of journalism: journalists; freelance writers; lectures; and media practitioners to provide a comprehensive collection of current articles. Offering a unique view of the way journalism is both practiced and taught, this book is divided into four sections: core values in journalism; specialisation within the craft; the constraints of practice and implications for the future. It covers areas including: gender and identity in the popular press; sports journalism; urban reporting; embedded journalism; censorship; and alternative media. This book is essential reading for students of journalism and all those considering a career in the field.

In this thoroughly researched study of the poorest of the poor, we get to see how they manage, what sustains them, and the efforts, often ludicrous, to do something for them.

Climate change and the related adverse impacts are among the greatest challenges facing humankind during the coming decades. Even with a significant reduction of anthropogenic greenhouse gas emissions, it will be inevitable for societies to adapt to new climatic conditions and associated impacts and risks. This book offers insights to first experiences of developing and implementing adaptation measures, with a particular focus on mountain environments and the adjacent downstream areas. It provides a comprehensive 'state-of-the-art' of climate change adaptation in these areas through the collection and evaluation of knowledge from several local and regional case studies and by offering new expertise and insights at the global level. As such, the book is an important source for scientists, practitioners and decision makers alike, who are working in the field of climate change adaptation and towards sustainable development in the sense of the Paris Agreement and the Agenda 2030.

- Latest Examination Paper with Scheme of Valuation
- Strictly as per the latest syllabus, blueprint & design of the question paper.
- Board-specified typologies of questions for exam success
- Perfect answers with Board Scheme of Valuation
- NCERT Textbook Questions fully solved

- Mind Maps for clarity of Concepts.

Hota after retirement is a bureaucrat-statesman. ~ Jagannath Patnaik, Former Minister, Odisha. Book laced with humour... a delight to read. ~ Surendra Singh, Former Cabinet Secretary. Hota an effective, upright and gifted civil servant... His narratives appear like replaying the old videos filled with powerful screenshots of an eventful past. ~ Prabhat Kumar, Former Cabinet Secretary. A Knighthood recipient IAS Karmayogi... recruited one million ASHAs— now the backbone of primary health.... superlative results — hospital delivery for common mothers up from 5 lakh to 1 crore in one year. ~ Ajay Upadhyay, Former Editor, Hindustan, Amar Ujala. Hota shook up moribund public health process with National Rural Health Mission. Countless mothers and children lives saved each year especially in interiors. ~ Amarjeet Singh, Former Secretary GOI. Inspiring book for all who want to achieve something in life. ~ Kingshuk Nag, Author, Journalist. Amazing risk—taking and dedication for public benefit, unusual for a Civilian ~ Lt. General. C. Vijan. *** Scintillating stories of dramatic events of Ekalavya — the Administrator; focused hard work 24/7. Yet, Hota is not a ‘constipated’ bureaucrat. An easy-rider’s saga-full of humorous anecdotes and hair-raising drama! No jargons. A ‘must-read’ for all Indians interested in policy leading to results.

The Asian monsoon region is one of these areas where consecutive years of droughts are causing severe problems for the lives and livelihoods of the communities. This book outlines the characteristics and challenges of the Asian monsoon drought and highlights innovative solutions and approaches undertaken in different parts of the region.

The book studies the relationship between large dams and water scarcity in Kutch. It argues that water scarcity is not merely natural, but is embedded in the social and power relations shaping water access, use and practices. Scarcity is portrayed as natural rather than human induced and this naturalisation of scarcity is beneficial to those who are powerful. This is a significant book in the light of the growing water crisis in India, and the world.

Climate change is not only one of the greatest threats to modern civilization; it is also a great challenge to economic development in the 21st century. Global warming can lead to periods of both drought and intense rain, causing crops to fail and ruining the livelihoods of many in underdeveloped countries. The Handbook of Research on Climate Change Impact on Health and Environmental Sustainability is an authoritative reference source that offers a comprehensive and timely analysis of various aspects of global warming and its consequences. Featuring such topics as assessment of and adaption to climate change, water and its socio-economic impact, the environmental effects of climate change on human health, and the mitigation of climate change on both a local and global level, this expansive handbook is an essential reference source for students, researchers, academicians, engineers, government executives, and other practitioners looking to make a difference in the treatment of our environment. This publication features timely research on subjects including, but not limited to, climate change and its effect on both urbanization and the trade competitiveness of different regions, water-related diseases flourishing due to climate change, health risks and rethinking health service provision, losses from natural disasters, farmers’ views on the environment, drought management policies, groundwater resource management, trends in long-term rainfall, fishery management and productivity, preserving biodiversity, and sustainable forest use.

?????:????????????????????

India has been the focus of international attention in the past few years. Rhetoric concerning its rapid economic growth and the burgeoning middle classes suggests that something new and significant is taking place. Something has changed, we are told: India is shining, the elephant is rising, and the 21st century will be Indian. What unites these powerful re-imaginings of the Indian nation is the notion of change and its many ramifications. Election campaigns, media commentators, scholars, activists and drawing room debates all cut their teeth around

this complex notion. Who is it that benefits from this change? Do such re-imaginings of nationhood really reflect the complex social reality of large parts of the Indian population? The book starts with the premise that it is within the mass media where we can best understand how this change is imagined. From a kaleidoscope of perspectives the book interrogates this articulation and the myriad forms it takes – across India's newsrooms, television sets, cinema halls, mobile phones and computer screens.

This book analyzes India's impressive efforts in responding to sensational and easily visible disasters in contrast to the 'silent emergency' of drought-induced under nutrition and starvation deaths. Building on Amartya Sen's famous claim that no famine has ever occurred in a democratic country, it re-examines the relationship between democracy, public action and famine prevention. Drawing on both quantitative and qualitative data in India at national, state and local levels as well as in-depth field visits to two states on India's east coast, Orissa and West Bengal, the author analyzes the following issues: the interaction between specific institutions in India and their accountability to the public the role of the media in highlighting problems of extreme poverty and destitution and the effectiveness of political and administrative responses to such reports the extent to which tribal groups are vulnerable to starvation and famine, and an analysis of whether starvation deaths in drought-prone Kalahandi district in Orissa are unique in India the impact of two major nutrition programmes, the Public Distribution System (PDS) and the Integrated Child Development Services (ICDS), in reducing the incidence, duration and impact of starvation deaths. Starvation and India's Democracy will be of interest to researchers in economics, political science, philosophy, development studies and South Asian studies.

Designed as a basic text for foundation and undergraduate courses in Environmental Studies, this book introduces students to key scientific concepts related to environment and sustainable development. It provides a comprehensive understanding of environmental concerns and issues with special reference to the Indian context. The primary objective of the book is to create an awareness of the environment. It conceptualizes the environment as a multidimensional and complex living system and describes the interlinkages that make up this system. The presentation is supported by relevant examples and case studies to contextualize the information given. Questions and self-learning exercises are provided at the end of each chapter to assist students to understand and apply the content in their immediate environment. Specifically, the book: - Highlights the interconnectedness of phenomena in real life, and the interdisciplinary and multidisciplinary nature of environmental studies. - Presents case studies to highlight examples of individual and collective action that have 'made a difference'. - Provides self-learning exercises for each chapter to help develop skills of observation, data collection, analysis, synthesis and presentation. Written in a non-technical manner and supported by attractive illustrations, this text will be welcomed not only by students but by anyone interested in understanding the environment. It is specially relevant as it is being published on the eve of the UN Decade for Education for Sustainable Development (2005-2014).

"In turn amusing and poignant, Nathan's vignettes make for engaging reading. I thoroughly enjoyed them, and so shall you" – Jug Suraiya
With fascinating insight, H.V. Nathan weaves several magnificent stories, anecdotes and episodes that pulsate with the quality of a gifted observer, who portrays people and events that make the essence of modern India's vibrant cities. Stimulating or satirical; perceptive or amusing, Nathan's themes alternate between the comic relief he finds as a commuter in a jam-packed train; the enigmas he finds as an insider in the grimy world of politics and the entertainment he shares in the melting pot of an urban scenario, thanks to his talent as a linguist. As an aide to a prominent politician and across a career that bridged Kolkata and Mumbai, Nathan views the pan-Indian scene around him with a tinge of irreverent humour, often mirroring the Common Man, immortalized by eminent cartoonist R.K. Laxman, as the inevitable hero.

Bookmark File PDF Everybody Loves A Good Drought

An excellent communicator, Nathan impressed V.S Naipaul enough to devote a whole chapter to this self-effacing man in his tome India: A Million Mutinies Now. Omnium Gatherum now presents Nathan as an author who can engross you in his scintillating sketch of India, in a book that you will mull over long after you have read it.
