Exploring Lifespan Development

Anchored in the CACREP accreditation standards, this third book in the Counseling and Professional Identity series provides counselors and human service professionals with a solid foundation to understand lifespan/developmental theory and apply these constructs to clients in counselling at various stages. Each chapter in the book is divided into a 3-step method, starting with a description of the theoretical content, followed by clinical illustrations and finishing with a complex case study with the distinctive "counselor thinking" feature accompanied by guided practice exercises. The book will also emphasize self reflection to help students learn experientially as they move through the text.

Textbook of Human Development – A Lifespan Development Approach

Connecting research and results. As a master teacher, John Santrock connects students to current research and real-world application, helping students see how developmental psychology plays a role in their own lives and future careers. Through an integrated, personalised digital learning program, students gain the insight they need to study smarter and improve performance.

Bridging the gap between the entertainment-focused "pop psychology" on television and the dry academic research that is published in journals, The Handy Psychology Answer Book helps answer why humans do what we do through accurate scientific data presented in a lively, accessible, and engaging way. It covers the fundamentals and explains the psychology behind how people deal with money, sex, morality, family, children, aging, addiction, work, and other everyday issues. Fully revised to reflect the latest scientific research—such as the current DSM-5 (Diagnostic and Statistical Manual of Mental Disorders, published by the American Psychiatric Association); the latest neurobiological theories; and the changing face of marriage—this timely reference has expanded to include information sections on the biology and evolution of emotions; technology and adolescence; bisexuality; optimism; autism; as well as a full section on the law, eyewitness testimony and police shootings. Featuring more than 1,500 answers to questions concerning how the human mind and the science of psychology really work such as: How have other cultures addressed psychological issues? Why was Freud so focused on sex? How can I maintain a healthy brain? Is it normal to argue during marriage? Does religion make people happier? How do we reduce social prejudice?

"Caring deeply about our children is part of what makes us human. Yet the thing we call 'parenting' is a surprisingly new invention. In the past thirty years, the concept of parenting and the multibillion dollar industry surrounding it have

transformed child care into obsessive, controlling, and goal-oriented labor intended to create a particular kind of child and therefore a particular kind of adult. In *The Gardener and the Carpenter*, the pioneering developmental psychologist and philosopher Alison Gopnik argues that the familiar twenty-first-century picture of parents and children is profoundly wrong--it's not just based on bad science, it's bad for kids and parents, too. Drawing on the study of human evolution and her own cutting-edge scientific research into how children learn, Gopnik shows that although caring for children is profoundly important, it is not a matter of shaping them to turn out a particular way. Children are designed to be messy and unpredictable, playful and imaginative, and to be very different both from their parents and from each other. The variability and flexibility of childhood lets them innovate, create, and survive in an unpredictable world. 'Parenting' won't make children learn--but caring parents let children learn by creating a secure, loving environment."--Provided by publisher.
